The 27th November 1906.

No. 176.—It is hereby notified that the holidays to be observed in public offices under the Administration of the Hon'ble the Agent to the Governor-General and Chief Commissioner of the North-West Frontier Province during the year 1907, which are specified in the schedule hereto annexed, are public holidays within the meaning of Section 25 of the Negotiable Instruments Act, XXVI of 1881. These holidays should be given to all Government servants subject to the single condition that it should be open to the head of an office to stop a holiday notified under the Act in the case of any individual guilty of idleness or inattention to duty, unless the day in question is deemed specially sacred by the members of the religion which the offender professes.

2. In addition to the holidays specified in the schedule, all Government offices will be closed on Saturday, the 28th, and Monday, the 30th December 1907.

3. Local holidays for great festivals or fairs peculiar to particular places may be granted at the discretion of heads of offices, provided always that there are no arrears of work.

Heads of offices may also, subject to the same condition, permit the last Saturday of every month to be observed as a holiday in the English and Vernacular offices. In such cases, all establishments should be allowed, subject to the condition laid down in the case of public holidays under the Negotiable Instruments Act, to take full advantage of the holiday.

4. This Notification does not apply to holidays to be observed in Civil Courts.

* Agents for sale of the Legislative Department publications

NOTICE —Books and Acts required for private use only can be purchased. Applications should be accompanied by a remittance, unless it is wished that the books should be sent by value-payable post, in which case, besides the ordinary postage, an additional charge is made for registration and commission.

Books and Acts required for the public service should be obtained through Local Governments to whom the applicant is subordinate.

Application for Government publications which are no longer in print should be made to the Agent to the particular Government under whose orders they were originally issued.

[The amounts within parentheses are for packing and postage]

IN THE COURT OF THE MUNSIF OF SHIKOHABAD.

CIVIL SUIT NO. 442 OF 1906.

(Sections 64 and 68 of the Code of Civil Procedure.)

Present :

BABU GOURI SHANKAR, M. A , MUNSIFF.

Daryai Singh . . . . *Plaintiff,*

Versus

Lekh Raj . . . . *Defendant.*

Whereas the plaintiff Daryai Singh, son of Baldeo Prasad, Brahman, resident of Muzah Ubhati, Parganah Shikohabad District Mainpuri, has instituted a suit in this Court, against you for ₨39-0-0, you are hereby summoned to appear in this Court in person or by a duly authorized Pleader of the Court able to answer all material questions relating to the suit on the 22nd day of December 1906, at 10 o'clock in the forenoon, the day fixed for the final disposal of the suit and you are hereby required to take notice that, in default of your appearance on the abovementioned date, the suit will be heard and determined in your absence.

Given under my hand and the seal of the Court, this 20th day of November 1906.

GOURI SHANKAR,
Munsiff.

No. 48.} CALCUTTA, SATURDAY, DECEMBER 1, 1906.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

NO. 2025.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SANITARY.

Calcutta, the 20th November 1906.

RESOLUTION.

INOCULATION against plague with a fluid prepared from the sterilised virus of the disease was introduced in India by Mr. Haffkine early in 1897. The composition of the fluid was subjected to searching examination by the Indian Plague Commission, who pronounced its employment to be free from danger; and it was used on a large scale in various parts of India without producing injurious results. In the hope of arresting the progress of plague in the Punjab, where the mortality had been exceptionally heavy, the local Government in 1902 obtained the sanction of the Government of India to a scheme for inoculating with the approved fluid more than six millions of people in the districts most severely affected at a cost of nearly ten lakhs of rupees. In order to meet the heavy demand thus created for the fluid, Mr. Haffkine, then Director of the Plague Institute, Bombay, abandoned the standard method of manufacture and substituted on his own authority a new process which was intended to increase the outturn in a limited time. This change involved the omission of the small proportion of carbolic acid which had up till then been added to the original fluid as a safeguard against accidental contamination. The new fluid was not treated with carbolic acid, other methods being relied upon to ensure its purity.

2. On the 6th November 1902, nineteen persons who had been inoculated on the 30th October in the village of Malkowal from a single bottle (labelled 53-N) of the new fluid were found to be suffering from tetanus and all of them subsequently died. A Commission consisting of Sir Lawrence Jenkins, K C.I.E., Chief Justice of Bombay, Lieutenant-Colonel Bomford, M D., C.I.E., Principal of the Medical College, Calcutta, and Major Semple, M.D., R.A.M.C., Director of the Pasteur Institute, Kasauli, was appointed by the Government of India to inquire into the disaster. They found that the specific contamination had in all probability been introduced into the fluid before the bottle was opened at Malkowal. They also expressed the opinion that carbolic acid was a valuable agent in restraining tetanus growth when added to plague prophylactic, and they therefore thought that its omission was a grave mistake. Experiments conducted independently in India by two bacteriologists appeared to confirm this view and their results, together with the data on which they were based and the technical portion of the report of the Commission, were submitted to the Lister Institute in London for examination and further experiment. With reference to the findings of the Malkowal Commission, the Institute were asked to report among other matters (1) on the comparative efficacy of the standard and the new fluids as a protection against plague; (2) on the comparative liability of each fluid to contamination, (3) on the probable origin of the tetanus virus in the Malkowal cases. Their report on these questions reached India early in December 1904 They summarised their conclusions as follows :—

"(1) The Institute sees no reason to differ from the conclusions of the Commission that the new prophylactic is not less efficacious than the old.

(2) The Institute is of opinion that in the hands of more or less unskilled workers, it is easier to ensure freedom from contamination by Mr. Haffkine's 'standard method' of manufacturing plague vaccine than with the 'water-agar process' as employed by him.

(3) The Institute is in entire agreement with the Commission as to the value of 0·5 per cent. carbolic acid in restraining tetanus growth when added to plague prophylactic, and its experiments emphasize still further the importance of this addition in preventing the growth and toxin formation in a vaccine which might be liable to the possibility of contamination with the spores of tetanus.

(4) The conclusions of the Institute coincide with those of the Commission that in all probability the tetanus was at the time of the inoculation in the fluid contained in the bottle, but that it is impossible to determine at what stage in its history or in what way bottle 53-N became contaminated."

3. The finding of the Institute was published on the 13th December 1904 in the form of a press *communiqué* which also announced the decision arrived at some months before by the Government of India, that only the standard fluid should be manufactured at the Plague Institute and that it should be bottled by a new method devised for the purpose of excluding germs.

4. Exception was taken by Mr. Haffkine to some of the conclusions of the Commission and of the Lister Institute, and a reference was made to the latter body on the subject. They have now in effect explained that the opening words of head (4) above ("The conclusions of the Institute coincide with those of the Commission") were introduced owing to their having misunderstood the finding of the Commission, and that as a matter of fact they do not accept that finding in its absolute form, but regard it as only probably correct The view now entertained by them is thus stated :—"The Governing Body of this Institute think that Mr. Haffkine has ground for his main contention, that the Lister Institute, while of opinion that the probabilities were in favour of the view that the tetanus impurity was primarily in the fluid, did not feel justified in asserting this as a proved fact in view of the possibility of contamination at Malkowal."

5. The papers annexed to this Resolution are published at the instance of the Secretary of State with the object of removing any misapprehension that may exist as to the precise degree of responsibility which attaches to Mr. Haffkine for the calamity which took place at Malkowal.

G. B. H. FELL,

for *Secretary to the Government of India.*

Extracts from the Report of the Punjab Plague Inoculation Commission.

(The portions omitted relate to administrative matters.)

We will now proceed to those issues which deal with the efficacy of the new prophylactic. Mr. Haffkine expected that the new prophylactic as compared with the old would result in a smaller reduction of case mortality, but that there would probably be a diminution in the incidence of attack. His first expectation was based on his views regarding supernatant fluid, his second on the universally accepted opinion that the dead bodies of the plague bacteria are the essential elements in the prophylactic, which give rise to immunity. In the water-agar process a large proportion of this essential element was ensured. The grounds for believing, and the precautions taken to establish, the correctness of the second of these expectations were the results (*a*) of experiments on animals, (*b*) of operations in Formosa, (*c*) of inoculations against cholera with prophylactic by an analogous process, and (*d*) of inoculations of members of the Laboratory staff. In addition there was the confirmation derived from the opinions expressed by the Indian and German Plague Commissions respectively.

(*a*) Apart from *à priori* reasoning, the evidence before us is not so conclusive in its character as to enable us to express a decided opinion as to the relative values of the old and new prophylactics. But, if sterile, we see no reason to believe that the new prophylactic is less efficacious than the old. We have collected a mass of figures in relation to this issue, and they form part of the record of this Report. So far as they go, they point to the efficacy of the new prophylactic. As an instance, we may cite the village of Patarheri in the Punjab, which has a population of 1,977 persons. Between October 1st and November 3rd, 979 were inoculated, 215 with the old prophylactic and 764 with the new. Plague declared itself in this village on 30th October. Among the 998 uninoculated, 168 contracted plague, *i.e.*, 16·8 per cent., with a case mortality of 74·8 per cent. Among the 979 inoculated, only 34 contracted plague, *i.e.*, 3·5 per cent., with a case mortality of 61·1 per cent.

(*b*) In the letter of reference it is said, "the slightness of the reaction which followed upon inoculation in a large proportion of cases suggested doubt as to the prophylactic efficacy of the fluid." We have been led by this remark to enquire in some detail into the occurrence and value of reaction. The evidence shows that pronounced reaction is less frequent with the new prophylactic than with the old, but it is a mistake to take this as an indication of want of efficacy. We see no reason to doubt the correctness of Mr. Haffkine's statement, that reaction as observed is not the immunising machinery, but is merely an index to the amount of immunising fluid, which may be injected having regard to practical purposes. Mr. Haffkine maintains that on this point he has been misunderstood in the past.

(*c*) Cognate to reaction is the question of dosage, to which we refer as it is made a ground of complaint by the Punjab Government that they had not been warned of the intention to "experiment with a fluid . . . . of a different dosage from that to which the people are accustomed." The evidence satisfies us that this furnished no real ground of complaint. It must be recognised that on general principles a smaller volume of the dose was an object to be aimed at, while we have had striking testimony that people in some instances welcomed the change, and none of its being objected to ; had any objection been made on this score, it obviously could at once have been met. Moreover, there was no practical difficulty in administering a sufficiently accurate dose with the syringes supplied.

We now come to the series of issues which is concerned with contamination and with reference to this word we think it right to point out that in

bacteriology "*contamination*" has a specialised sense indicating non-sterility, so that it does not necessarily and under all circumstances carry with it the idea of noxious taint, which is part of its popular connotation.

The grounds for believing, and the precautions taken to ascertain, that the new prophylactic would not be more liable to contamination than the old, were the following:—

(*a*) The manipulations were not more numerous.

(*b*) The actual period of manufacture was materially curtailed.

(*c*) For what it may be worth, the water-agar prophylactic had been used in connection with other preparations.

(*d*) The time and degree of the heating process were increased.

(*e*) The fluid was sterilized by heat after the final bottling, in accordance with the suggestion conveyed in a resolution of the Government of India, nos. 462 to 477, dated the 22nd of February 1900.

(*f*) A far higher percentage of issuing bottles was directly tested for sterility. As to this Mr. Haffkine says: "We did our best to "eliminate non-sterile brews, by testing one bottle out of three or "four, instead of the old testing of one out of sixty or seventy, and "by rejecting every brew in which a suspicion of non-sterility "arose, and recalling brews inadvertently sent out of the sterility "of which we were not certain."

Looking at its essential constituents alone, we think the new prophylactic was not more liable to contamination than the old, but in our opinion the final process of sterilization as carried out was open to objection; for the heating of the bottle and its subsequent immersion in cold water might result in the entrance of contamination by the loosening of the stopper. A further objection to the method of manufacture was the omission of the one-half per cent. carbolic acid, for this antiseptic undoubtedly would inhibit the growth of many contaminating micro-organisms, though there are others, perhaps, not much influenced by its presence. It was at a former stage contended before us that the tetanus bacillus being a spore-bearing micro-organism, might fall within the last category, and we felt that the precise influence of the carbolic acid on the growth of tetanus could only be solved by experiment. The necessity of suspending final judgment on this point was emphasized by an observation by Dr. Surveyor, who deposed that out of six bottles of plague prophylactic recently returned to the Laboratory only one was sterile, though they had all been carbolized. The necessary experiments have been devised and carried out by Lieutenant-Colonel Semple, who finds that:—

(*a*) Tetanus bacilli, when planted in a bottle of uncarbolised water-agar plague prophylactic, grow freely, whether strict anærobic precautions are observed or not.

(*b*) Tetanus bacilli, when planted in a bottle of water-agar plague prophylactic, to which 0·5 per cent. carbolic acid had been added, failed to grow, and at the end of six weeks the fluid failed to convey the disease to animals.

(*c*) Tetanus bacilli failed to grow in ordinary peptone broth and in glucose broth (one of the most favourable media for tetanus growth) when 0·5 per cent. carbolic acid had been added thereto.

By these results we are led to the conclusion that carbolic acid is a valuable agent in restraining tetanus growth when added to plague prophylactic, and we therefore think that its omission was a grave mistake.

It is, however, but fair to Mr. Haffkine that we should draw attention to the Government Resolution nos. 462—477, dated the 22nd of February 1900, published in the *Bombay Gazette* of 13th of March 1900, and communicated to Mr. Haffkine for his information. It was there stated that the adoption of the

suggestion made by the Commission, that the prophylactic should be re-sterilized at a temperature of 60° C., after it has been sealed up in a bottle, would give still greater security. This is claimed by Mr. Haffkine as a warrant, not only for sterilisation by heating at the final stage, but also for the omission of carbolic acid, inasmuch as it is well established that carbolic acid cannot be added to the unheated plague culture without so altering its chemical constituents that it becomes perfectly useless from the point of view of giving protection when subsequently heated.* Yet even if the influence of carbolic acid was an uncertain quantity, Mr. Haffkine chose a singularly inopportune moment to abandon what he had manifestly continued to employ as a safeguard, notwithstanding the resolution to which he now appeals.

Over and above the contamination discovered in the Laboratory in the course of manufacture, it has been shown that non-sterile prophylactic was in fact issued, and that to a considerable extent. This conclusion is founded, not merely on evidence taken in the Punjab, where rejections were not always based on reliable tests for sterility, but also on evidence furnished in the Laboratory itself. For instance, Dr. Surveyor in his evidence says: "I have examined 235 "bottles returned from the Punjab; 25·63 per cent were sterile and 72·77 per "cent. were contaminated ærobically, while in 1·70 per cent. there probably was "anærobic contamination. I have not yet finished my observations on these." This is an instructive statement, so far as it goes, as to the percentage of contamination, but apart from this particular instance, and except to the extent of the inference it suggests, the materials on record do not enable us to formulate any precise numerical computation of the amount of non-sterility in the prophylactic as issued.

In the letter of reference it is said: "From the information before the "Government of India, the first intimation of danger appears to have come from "the Laboratory itself, the authorities of which telegraphed to recall a con- "signment of fluid sent to Ludhiana. During the next few days the contents of "numerous bottles were discovered by operators in several different districts to "be putrid and at least four deaths and several instances of abscesses occurred "after inoculation in circumstances which gave rise to grave suspicion that they "were due to the employment of contaminated fluid. In one instance, at least, "an inoculated person died of tetanus." As this passage is relevant to the question of contamination, we deal with it at this stage: (*a*) In the first place the consignment of fluid to Ludhiana was recalled merely because it was found by the clerical staff that there were two brews of the same number. (*b*) Judging from the practical tests, to which inoculating officers were subjected in our presence, their pronouncement as to putridity must be accepted with considerable reserve. (*c*) It was admitted by the Punjab officers, and seems to be the case, that the four deaths and several instances of abscesses, to which the letter alludes as giving rise to grave suspicion that they were due to the employment of contaminated fluid, could not be attributed to that suggested cause. There no doubt have been several instances of abscesses beyond those to which the letter alludes, but from the facts before us it is impossible to connect them with the fluid rather than with defective inoculation. We have had evidence that putrid, or at any rate offensive, fluid has been injected without apparent harm, or at most with slight local inflammation. (*d*) We are satisfied that the isolated case of death from tetanus cannot be ascribed to contaminated fluid.

As a prelude to our discussion of the thirteenth and fourteenth issues we will briefly state the salient and undisputed facts relating to the death of the nineteen persons after inoculation at Malkowal. They were the first to be inoculated on the morning of the 30th of October and the only persons inoculated from a bottle marked 53-N. The operation was performed by Dr. Elliot, his assistant being the compounder Narinda Sing: in all tetanus symptoms were manifested on the 4th or 5th of November; and all died between the 6th and the 9th inclusive. There is a conflict of evidence on the point, but after careful consideration we have come to the conclusion that the nineteen persons were all inoculated with one and the same syringe.

* Indian Plague Commission Report, Volume V, paragraph 410.

The two broad alternatives with regard to the seat of the specific contamination are that it either was in the prophylactic fluid, or it was not; for, notwithstanding the form of the thirteenth issue, the second of these two hypotheses cannot be regarded as outside theoretical possibility. If not in the fluid the contamination may have been (*a*) on the needle, (*b*) on the arms of the persons inoculated, or (*c*) introduced in the process of washing those arms. In support of this alternative instances were cited in which a number of successive persons or animals are reported to have been affected with tetanus by the repeated use of the same instrument. An objection common to all these suggestions is the precise concurrence of the incidence of the attack with the use of the fluid of this particular bottle Thus to deal first with the theory that the needle may have been the seat of the mischief, it is a remarkable circumstance that the contamination should have survived only so long as bottle 53-N was in use, and then have ceased to manifest itself. To proceed with the needle, it was placed in smoking-hot oil before operations commenced; this should in the ordinary course have sufficed to completely sterilize it. Then Lieutenant-Colonel Semple has made an experiment in which a similar needle dipped in a tetanus culture, and used immediately afterwards on a guinea pig, failed to impart tetanus; this shows that a contaminated needle would not necessarily convey tetanus in all cases. The contamination could not have been transferred from some infected material to the needle between the several inoculations as the evidence establishes no such material was ever used We think the possibility of the mischief having been on the arms of the 19 persons, or imparted by the material with which the arms were washed, too remote to be accepted in the circumstances of the case. We have dealt with these hypotheses as fair samples of what might be advanced in support of the alternative that the mischief was not in the fluid, and not as an exhaustive catalogue of possibilities; but we regard them as so typical as to render further enumeration needless. There is also the important circumstance that on the examination of the bottle at Kasauli it was found to contain tetanus bacilli, and though not absolutely conclusive on the point, we have always regarded this fact as strongly suggestive of the inference that the contamination was in the fluid. We are now confirmed in this view by the experiments set out in Appendix B (bottle no. 4, experiments 7 and 8) which establish that, though there were tetanus germs in the ½ c c. of the fluid left in the bottle no. 4, the conditions in it when thus emptied did not permit of their growth, and this points to the conclusion that the bacilli found by Lieutenant-Colonel Semple in the Malkowal bottle were the result of a growth that had taken place in the fluid.

If the matter had rested here, we should have regarded it as the only reasonable inference, that at some time or other the specific contamination had been introduced into the fluid. But the evidence shows that this same syringe was used after an interval of a few minutes, and that the persons inoculated by its means from another bottle are not known to have manifested any symptoms of tetanus. On this fact has been founded the argument that the freedom from tetanus of those subsequently inoculated is inconsistent with the theory that the specific contamination could ever have entered the syringe, for if so contaminated, it is urged, its sterilisation could not have been completed by being merely rinsed out with carbolic acid of a strength of 1 in 20 The experiments that have been made by Lieutenant-Colonel Semple, appended to this report, show, we think, that the argument is so far well founded that, where a fluid containing a culture of tetanus is used, the syringe, even after it has been washed out with a 1 in 20 solution of carbolic acid, may retain enough contamination to affect fluid with which it is subsequently filled. The extent, however, of its influence varies according to the richness of the growth between fatal results and absence of all manifestations. There are no means of forming an opinion as to the precise richness of the growth in the bottle 53-N beyond Lieutenant-Colonel Semple's view that it was a poor growth in comparison with that which he used in his experiments nos. 1 and 2 in Appendix E This view is based on (1) microscopical specimens, and (2) the rapidity of the fatal effects on guinea pigs. We therefore are unable to accept the argument that the freedom from tetanus of those persons subsequently inoculated shows that the specific contamination

could not have entered the syringe, and after full consideration we think the contamination was in the fluid. Mr. Haffkine's experiments, Appendix C, in no way disturb this conclusion.

If the contamination was in the fluid, then it must have found its way there either before or after the bottle was opened at Malkowal. That it might have effected an entrance at Malkowal cannot be disputed; thus, by way of illustration, the stopper or the forceps might have been dropped on the ground and applied to the mouth of the bottle with contamination adhering, or spores, settled between the rubber stopper and the rim of the bottle, might have dropped in as the stopper was pulled out.

In favour of the view that the mischief happened at Malkowal reliance has been placed on (*a*) failure to observe a smell, (*b*) the absence of explosive noise, or, to adopt the language of one of the witnesses, the fact that the stopper did not come out with a pop, and (*c*) the tardy manifestation of the tetanus symptoms. No doubt the presence of tetanus, at any rate in a pure culture, may be detected by one experienced and on the alert, by its characteristic smell; our personal observation, however, leads to the conclusion that all bottles of plague prophylactic have a peculiar and not agreeable smell, so that Dr Elliot, under the circumstances in which he was working, may well have failed to specialise a tetanus smell. The failure to perceive a smell is undoubtedly a fact that calls for consideration, but we do not regard it as so conclusive in favour of tetanus having been introduced at Malkowal as to outweigh all other considerations. To the absence of explosive sound we attribute no importance, so that it only remains to consider the value of the inference based on the tardy manifestation of the disease. It is contended that had the contamination been introduced in the Laboratory and growing for five weeks, it would have formed toxins, which would have caused a more rapid onset of the symptoms of the disease. It must be conceded that in experiments on animals the rapidity of the onset is influenced by the amount and virulence of the toxin introduced, and *à priori* we see no reason for saying that similar results might not follow the injection of the tetanus microbe with its toxin into the human body. Manifestly there can be no appeal to clinical experience which is based on observations of cases where it must be supposed the microbe alone has been introduced, and has only commenced the elaboration of toxin—the actual cause of the symptoms—after it has established itself in the injured part. Though therefore the ordinary incubation of tetanus in clinical experience in India is a period, which substantially corresponds with what was manifested at Malkowal, it is impossible to say, in the absence of experiment, what the sequel would be where a ready formed toxin is injected into the human system. It is therefore clear, accepting all that this train of thought implies, we cannot estimate the exact import of the duration of the incubation in the Malkowal cases. This concludes the considerations favouring the view that the contamination was introduced at Malkowal. Against it there is the fact that the specific contamination permeated the whole fluid in the bottle, as is shown by the uniform results on the sufferers, and without a series of suppositions opposed to all reasonable probability, these results can only be attributed to a growth of some duration, though not necessarily of great vigour, a view strongly supported by the experiments mentioned above. We regard this circumstance of such moment as to outbalance the arguments on the other side.

It follows from this that in our opinion the specific contamination was introduced before the bottle was opened at Malkowal, and we see nothing in the quality of the agency employed, taking it as a whole which imposes any antecedent improbability in the way of accepting this conclusion. Though our finding does not in form follow the terms of the thirteenth issue, in substance it does; for the possibility of contamination entering the bottle after it was issued, but before it was opened, could only be attributed to defective operations in the Laboratory.

How the contamination was introduced cannot be ascertained: we can only endeavour to narrow down the possibilities, and for this purpose it is necessary to state certain relevant facts. The prophylactic contained in the Malkowal bottle was part of a brew known as 53-N. This brew was inseminated on the 17th of September 1902. On the 19th of September it was examined and emulsified, sterile water being syphoned down aseptically and the film of plague growth

washed off the agar surface by shaking the flask. On the same day Stephen, who then for the first time commenced practical work, decanted by syphoning the contents of the flask into five issuing bottles, at the same time syphoning a sample of the material into an agar test tube. The test tube growth was four days later examined for purity, and found pure, and the five bottles were tied up in a separate bag and sent for sterilization by heat. On the 23rd September one of the five bottles taken as a sample was examined for sterility by insemination into a tube of sterile broth. On the 25th this tube was found to be sterile, and after dosing, the five bottles were handed over to the despatching department. Four of them were sent out on the 30th September in box 202 to the Plague Medical Officer at Jullundur, and on the 4th of October the fifth bottle was sent in box 205 to the Superintendent, Central Disinfection Depôt, Jullundur. It was this last bottle that was used at Malkowal, and as a result of the evidence and what we saw at the Laboratory, we hold that this was not the sample bottle manipulated by De Souza. We think it improbable that contamination was introduced into the fluid prior to the stage at which it was handed over to the decanting clerk (1) by reason of the tests which cover that period, one of which was anærobic as well as ærobic; (2) because the manipulations up to that time had been performed by highly trained bacteriologists; and (3) because, as we have discovered the remaining bottles of brew 53-N were used without producing tetanus symptoms, or, so far as we could learn, any bad results. For the reasons already stated, the possibility of contamination at the sampling stage may be excluded, so that limiting ourselves to what is reasonably probable the source of contamination is narrowed down to a choice between the following possibilities:—

(*a*) the bottle may have been insufficiently sterilized before it came into the decanter's hands,

(*b*) the decanting may have been performed with defective precautions;

(*c*) the final sterilization may have loosend the stopper with the result that the specific contamination entered, either in the cold bath, or afterwards before the bottle was opened at Malkowal.

To make an exclusive selection from these possibilities with any show of reason is impossible.

L. JENKINS.

D. SEMPLE.

BOMBAY;
16th April 1903.

APPENDICES.

APPENDIX A.

No. 1375, dated the 6th March 1903.

From—Major D. SEMPLE, M.D., R.A.M.C., Director, Pasteur Institute of India, Kasauli,

To—The Secretary to the Government of India, Home Department.

I HAVE the honour to forward herewith the results of a series of experiments carried out by me with the object of throwing more light on several points discussed in the answers of the Commission to issues 13 and 14 in connection with the Malkowal tetanus cases.

2. Before leaving Bombay I discussed these experiments (or the general trend of them) with Sir Lawrence Jenkins and Lieutenant-Colonel Bomford, I.M.S., and I am now sending a copy of the results to them.

In order to clear up several points touched upon by the Commission in their report when answering issues 13 and 14 in connection with the specific contamination which gave rise to the Malkowal tetanus cases, the following experiments were carried out by me at the Pasteur Institute of India, Kasauli, on my return from Bombay :—

Experiment 1.—A needle dipped in a tetanus culture and used immediately afterwards to prick a guinea pig failed to give the animal tetanus.

Experiment 2.—A 1 c.c. syringe filled with a tetanus culture, then emptied and washed out once with 1 in 20 carbolic acid solution, then filled with sterile broth and the contents inoculated hypodermically into a guinea pig failed to give the animal tetanus.

Experiment 3.—A guinea pig inoculated hypodermically with $\frac{1}{20}$ c.c. of a tetanus culture did not contract tetanus.

The result of this experiment does away with the necessity for experiments 1 and 2 and at the same time proves that a considerable quantity of this particular tetanus is required to infect a susceptible animal.

Experiment 4.—A guinea pig inoculated hypodermically with $\frac{1}{10}$ c.c. of tetanus culture contracted tetanus on the third day.

Experiment 5.—Tetanus planted in a bottle of water-agar plague prophylactic, and incubated at 37°C. for seven days, grew well, and gave the characteristic smell of tetanus when opened.

There was no explosive noise of any kind when removing the cork from the bottle. Numerous tetanus bacilli were present in stained specimens.

Experiment 6.—Tetanus and micrococci planted in a bottle of water-agar plague prophylactic, and incubated at 37°C. for seven days, grew well, and gave the characteristic smell of tetanus when opened.

There was no explosive sound of any kind when removing the cork from the bottle. Numerous tetanus bacilli and also micrococci were present in stained specimens.

Experiment 7.—Tetanus planted in water-agar plague prophylactic, and incubated under anærobic conditions for seven days, grew well, and gave the characteristic smell of tetanus when opened. Numerous tetanus bacilli were present in stained specimens.

Experiment 8.—Tetanus planted in a bottle of water-agar plague prophylactic, to which 0·5 per cent. carbolic acid had been added gave no growth after being incubated seven days at 37°C.

Experiment 9.—Tetanus failed to grow in glucose broth, and ordinary broth under anærobic conditions, when 0·5 per cent. carbolic acid had been added.

Glucose broth under anærobic conditions is one of the most favourable media for tetanus to grow in.

These experiments, with the exception of no. 4, were done on the 19th February. Experiment no. 4 was done on the 23rd February because Experiment no. 3 failed to contract tetanus.

The guinea pigs used were two-thirds grown healthy animals.

The water-agar plague prophylactic used was obtained from the Plague Research Laboratory, Bombay, and had been returned from the Punjab last November.

The bottles were tested for sterility (including an anærobic test for tetanus) before planting tetanus into them.

The tetanus used in all cases was a pure culture isolated by me from the Malkowal bottle (53-N) on the 15th November 1902 when it was sent to Kasauli for examination.

APPENDIX B.

Further Experiments with tetanus to elucidate certain points touched upon by the Commission in connection with the Specific Contamination which gave rise to the Malkowal Tetanus Cases.

Bottle no. 1.—A sterile bottle of water-agar plague prophylactic (capacity 30 c.c.; Brew no. 58-B 1; date 20th October 1906, dose 1-5 c.c.) was inoculated on 19th February 1903 with one platinum loop of a pure broth culture of Malkowal tetanus bacilli and also with a non-pathogenic coccobacillus. The bottle was then incubated at a temperature of 37°C. for seven days and examined microscopically on 26th February 1903 when a rich growth of tetanus germs was found, also other bacilli. The characteristic smell of tetanus was observed, but no explosive noise of any kind, on removing the cork. It was then put aside in a dark cupboard at room temperature (about 18°C).

Experiment 1.—31st March Three guinea pigs received hypodermically from bottle no 1, $\frac{1}{50}$th, $\frac{1}{10}$th, and $\frac{5}{10}$th c.c. respectively. All three died from tetanus next day; the $\frac{5}{10}$th c. c. one at about 8 A.M., the $\frac{1}{10}$th c.c. one at 11 A.M.; and the $\frac{1}{50}$th c. c one at about 3 P.M. This experiment proves that bottle no. 1 contained a rich and virulent growth of tetanus.

Experiment 2.—A sterile 20 c.c syringe was filled once from bottle no. 1 and allowed to remain full for two minutes, after which the contents were slowly expelled through the needle. It was then filled with a 1 in 20 solution of carbolic acid, and after two minutes (without any shaking) this was also slowly expelled through the needle. The syringe was then filled with sterile peptone broth, and 1½ c.c injected hypodermically into 19 guinea pigs (a second re-filling to the extent of 8½ c.c. being necessary to complete the 19 inoculations of 1½ c.c. each). Result:—

April 3rd.—3 show symptoms of tetanus.
,, 4th.—10 show symptoms of tetanus.
,, 5th.—15 show symptoms of tetanus.
,, 6th.—17 show symptoms of tetanus.
,, 15th.—Since the 6th, seven have died from tetanus, symptoms slight in the others which are likely to recover.

Bottle no. 2.—On 19th February a sterile bottle of water-agar plague prophylactic (capacity 30 c c, Brew no 12-A e, date 1st October 1902; dose 2 c.c.) had carbolic acid to the extent of 0.5 per cent. added to it, and was then inoculated with one platinum loop of a pure broth culture of Malkowal tetanus, and placed in the incubator at 37°C. for seven days On examining th bottle on 26th February 1903, there was no growth of tetanus; no smell on opening it; and no tetanus bacilli found in stained specimens. It was then put aside in a dark cupboard at room temperature (about 18°C.).

Experiment 3.—31st March. Two guinea pigs were given hypodermically 1 c.c. and 1½ c.c. respectively from bottle no. 2, after it had been well shaken up. Both remained free from tetanus.

Experiment 4.—Two anærobic cultivations were made in peptone broth from bottle no. 2, and incubated at 37° C. One showed a growth of tetanus, and the other remained sterile.

Remarks.—Bottle no. 2 and Experiments 3 and 4 show that 0·5 per cent. carbolic acid prevents a growth of tetanus germs in water-agar plague prophylactic, and would be likely to prevent an accidental contamination of such a bottle with a small quantity of tetanus germs from having any harmful effects, though not necessarily completely destroying the contamination.

Bottle no. 3.—1st April. A large platinum loop from bottle no. 1 (a rich growth of tetanus and other bacilli) was inoculated into a sterile bottle of water-agar plague prophylactic, containing 30 c.c., and then well shaken up.

Experiment 5.—1st April. Two guinea pigs received hypodermically 1 c.c. and 1½ c.c. respectively from bottle no. 3.

Result.—Both contracted tetanus on the fourth day.

Remarks.—This experiment shows that a platinum loop of tetanus from a rich growth in water-agar plague prophylactic is sufficient to permeate a 30 c.c. bottle to such an extent that 1 c.c. conveys the disease to a guinea pig.

Bottle no. 4.—6th April. A small piece of thin straw, about one-fourth centimetre square, was dipped into bottle no. 1 (a rich growth of tetanus and other bacilli) and allowed to remain in for two minutes and moved about so as to contaminate it. It was then removed with a sterile needle and allowed to dry in a sterile glass dish at room temperature for one hour, then placed in a sterile bottle of water-agar plague prophylactic containing 30 c.c. for five minutes, and well shaken up several times after which it was removed.

Experiment 6.—6th April. Five guinea pigs received hypodermically 1 c.c. each from bottle no. 4.

Result.—All five animals remained free from tetanus.

Experiment 7.—6th April. The contents of bottle no. 4 with the exception of ½ c.c. were poured out, the bottle corked up and placed in the incubator, at 37° C.

Result.—No growth of tetanus took place in this bottle.

Experiment 8.—6th April. An anærobic cultivation was made from the ½ c.c. remaining in bottle no. 4.

Result.—Typical growth of tetanus was present on the 3rd day.

Remarks.—Experiments 6, 7 and 8 prove (1st) that the amount of tetanus bacilli which adhered to the small piece of straw when dipped in a rich culture of tetanus was sufficient to permeate a 30 c.c. bottle of plague prophylactic, but not to such an extent that 1 c.c. of its contents would convey the disease to guinea pigs. (2nd) That 0·5 c.c. of water-agar plague prophylactic thus infected and allowed to remain in a 30 c.c. bottle would not admit of a growth of tetanus even when incubated at 37° C. (the most favourable temperature for the growth of this bacillus). The ærobic conditions in the bottle would account for absence of growth.

D. SEMPLE, *Lieut.-Col., R.A.M.C.*

The 16th April 1903.

APPENDIX C.

No. 292, dated the 8th February 1903.

Demi-official from—W. M. HAFFKINE, Esq., C.I.E., Director-in-Chief, Plague Research Laboratory,

To—Major D. SEMPLE, M.D., R.A M.C., Secretary to the Punjab Inoculation Commission.

I shall be obliged for your kindly examining and submitting to the Commission accompanying specimens.

On the 2nd instant Kapadia and I placed into a sterile prophylactic bottle, containing 30 c. c. of sterile broth, a minute bit of straw exactly similar to the one now forwarded in a sample tube. (It is surrounded there by a square of red ink.) The bit was got, aseptically, from the interior of a freshly dropped ball of horse-dung. It was about 1 m.m. in length, ⅛ m.m. in breadth, and of a microscopically unmeasurable thinness. As soon as the bit was placed in the bottle, the latter was shaken lightly (it was plugged with a sterile cotton plug), and a sterile 20 c.c. syringe was filled from it. The contents of the syringe was then injected in doses of 1½ c.c. into 13 test tubes containing melted agar which was allowed to solidify in a sloped position. As soon as the syringe was empty, it was refilled with the remaining 10 c.c. of broth, another 6 agar tubes were treated in the same way. Thus in a few minutes 19 agar tubes, representing 19 patients, were injected with sterile material contaminated by the bit of straw above described.

2. After that I filled the syringe with sterile broth, rinsed it by shaking it, and ejected the contents; filled the syringe with sterile broth again, shook it again, and ejected this too, to imitate Elliot's (*a*) first squirting out a syringeful of carbolic lotion, and (*b*) then filling the syringe with lotion again and emptying it, when taking up bottle no. 3.

3. After that I filled the syringe with sterile broth, and injected the latter in doses of 1½ c.c. into 10 agar tubes. The latter would correspond to the patients inoculated by Elliot from bottle No. 3.

I forward herewith the agar tubes in question. The first series are marked as nos. 1 to 19 inclusive. The second, as nos. 20 to 32. In the first series, apart from a few larger colonies, there is a number of minute ones in the depth of the agar (up to 50 colonies and above per tube). I am sending in a magnifying glass for their examination. In order to make it certain that these are colonies of microbes, I cut out, as you will see, a piece of agar from tube no. 1. The piece cut out is in the second of the two sample tubes which I am sending. I made a microscopic slide from one of the suspected colonies and am sending the slide on. It shows a flourishing mass of stout cocco-bacilli, some in pairs, but mostly single, sometimes in fours.

In the second series of tubes I find, in some of them, certain single points or a couple of points per tube, resembling the minute colonies of the series nos. 1 to 19. In one, there is one colony fairly well developed, apparently of another species. I have not made slides from these tubes yet, but the difference in the number of colonies per tube, assuming that the second series contains real colonies, is great.

II.

4. You will find in the parcel a third series of agar tubes marked nos. 33—42. These were inseminated as follows: Dr. Gibson prepared a moderately turbid emulsion of the yellow sarcina in sterile broth. I filled a sterile syringe with that emulsion, and gave it to Kapadia to squirt out the contents, at dose of 1½ c.c., at an interval of about one minute. When the 20 c.c. of the contents were squirted out, 10 c.c. more of the same emulsion were introduced, and squirted out in the same way, to imitate contamination of a syringe by a fairly rich culture of (tetanus) microbes injected into 19 patients. After that, the syringe was twice rinsed with sterile broth to imitate sterilization by rinsing. The syringe was then filled with sterile broth and 1½ c.c. of the latter squirted

out into each of the agar tubes, nos. 33—42, to correspond to the inoculation of patients with no. 3 Malkowal bottle. Apart from the larger colonies grown on the surface of the agar, there are numberless small ones in the mass of it.

The result of the above two experiments illustrates, it seems to me, to perfection, the following line of reasoning: if, at the time of filling the first syringe at Malkowal, bottle 53-N contained a fairly rich culture of tetanus bacilli, similar to, or even much less rich than, Dr. Gibson's emulsion, rinsing should have left the syringe very badly contaminated and one would be justified in expecting tetanus cases in those inoculated from bottle no 3. If, on the other hand, contamination occurred at the time of the operation, from, say, a bit of dirt in the needle, or from one dropped in during the opening of the bottle, a number of contaminating microbes would be injected into *each* of the first 19 patients, and only single microbes, or hardly any, injected into those who got bottle no. 3.

No 296, dated the 9th February 1903.

Demi-official from—W. M HAFFKINE, Esq., C.I.E., Director-in-Chief, Plague Research Laboratory,

To—H. H. RISLEY, Esq., C I E., Officiating Secretary to the Government of India, Home Department.

The articles referred to in my demi-official of yesterday's date to the Secretary, Malkowal Commission, forwarded to you yesterday, are being posted to your address to-day. The magnifying glass has been omitted.

The articles referred to are two sample tubes containing a piece of straw and a piece of agar with colonies of microbes in it, three series of 42 agar tubes and a microscope slide made from one of the suspected colonies of microbes in the agar tubes.

Extracts from evidence taken before the Commission.

W. M. HAFFKINE.

I am Director-in-Chief of the Plague Research Laboratory, Parel. I have occupied this position, though not under that title, from the institution of the Laboratory on the 8th October 1896.

The prophylactic fluid is a combination of sterilised bodies of microbes and of a supernatant fluid. When I speak of a "supernatant fluid" I mean the cultivation fluid in which the plague microbial growth had been obtained. The fluid had been prepared mostly according to the process described in the second column of the tabular statement* which I have handed over to the Commission, and in some cases according to that described in the third column. I can complete this information by reference to the Laboratory books if required. Prior to this I had not employed the manipulations described in the other columns for the purpose of supplying plague prophylactic to the Punjab or elsewhere. I have always employed a water-agar vaccine in preparing the anti-cholera fluid.

* See below, page 2584

As appears from my letter of the 31st July to the Government of Bombay I had found it necessary, in order to meet the Punjab demand, to introduce a modification in the manufacture of the prophylactic

I had determined on this at the time of my telegram of the 17th June, in order to meet the circumstances of the case in a way which I considered correct, and informed Government. It was a modification, the principles of which I had previously thought out the principle is to be found in my letter to the Government of India of the 7th June 1898 (reproduced on page 644, Volume III, Indian Plague Commission), but the details were, as they must always be, adapted to the circumstances of the present case. The details may be seen from my letter of the 12th August 1902 to the Government of Bombay. As stated, I first referred to this modification in my letter of the 31st July to the Government of Bombay, when submitting to them a statement of my requirements for the Punjab work. I did not at this stage notify the modification to Wilkinson, because it was more a modification in the process of preparation than in the product. I may illustrate my meaning as follows: had I substituted for my prophylactic a material prepared on the lines of anti-toxic serum, or had I substituted for the living cholera vaccine a sterilized vaccine, I should have considered it my duty to notify to Wilkinson or any applicant, as that would have been an essential change in the product, involving different principles and results. Here it was only a modification in the manner of manufacture, that is an alteration of the nature of those which are constantly recurred to in this or other laboratories either to further improve a product, or to adapt the manufacture to circumstances.

In former times, as I mentioned, we had been accustomed to send prophylactic to the Punjab and elsewhere with modifications of the above kind without notifying. The above refers particularly to the operations described in column 3 of my tabular statement.

Subsequently, in the third week of September, when the assistance we were expecting failed us, and we found we were unable to carry out the plan proposed with the means at our disposal, we determined to have recourse, in the meantime and at least partially, to the water-agar prophylactic (my statement, column 6) for the following reasons: The water-agar modification was the simplest and the easiest, and far and away the quickest to prepare, I had not my staff adequate or trained to prepare the material on the other lines and time permitted of no delay, as I stated in my wire to Private Secretary to His Excellency the Governor of the 4th September 1902; I consequently determined on supplying, for the time being, the water-agar material as a correct temporary substitute.

I thought it most necessary to meet the Punjab demand, and in my opinion this was a satisfactory temporary substitute.

I did not notify immediately this temporary measure to the Bombay Government or to the Punjab Government or to Wilkinson prior to Wilkinson's visit to the Laboratory, a week later. Mr. Hallifax was writing to me about Wilkinson's coming to Bombay to enquire into the change; three days after we started the water-agar material subsequently sent out to the Punjab.

Supernatant fluid was absent from the water-agar prophylactic.

Note—I here refer to paragraphs 26,512 to 26,515 of Dr. Haffkine's Evidence, Volume III, Report of Indian Plague Commission, and question him on it in reference to the water-agar fluid.

No doubt I did in my evidence use the word "inadmissible," and say that as long as no other treatment has been shown to be as effective as the one employed, it was "inadmissible" to modify it. From the context it will be seen that the word "inadmissible" was used for "unjustifiable," or "not reasonable." I was being subjected to a hostile examination and my words may have been more forcible than they should have been, or may not have been well chosen.

Under the circumstances of September 1902, I considered I *was* justified in not delaying my operations for the purpose of obtaining the supernatant fluid. The opinion in the most competent quarters is that the supernatant fluid is superfluous. I may, for this, refer to the Indian Plague Commission, or I might say to any authority that has written on the matter. Under the circumstances, I thought there was justification in adopting the quicker method of manufacture.

The old prophylactic had two constituents, and all that was done as a temporary and partial measure * was that one of them was, under the urgency of the case, temporarily eliminated, and that eliminated was a constituent which most authorities considered useless. It was a temporary elimination of a minor and, according to the general consensus of opinion, doubtful constituent.

* For we were continuing as far as we could the manufacture on the lines notified to Government in my letter of the 31st July
W. M. HAFFKINE.

I would not call the modification relatively very substantial, as judged by the nature of the product and the results to be obtained.

I had no idea that the Punjab Government were at all interested in the method of manufacture. I do not think it would be right to go to the Indian Plague Commission's Report of 1899-1900 for a description of the details of my process in 1902.

I knew that the Punjab Government and Wilkinson were anxious that people should come forward willingly. I cannot think that the people could have been deterred because the dose would be smaller or the reaction slighter.

In my own experience, I have observed that people who wish to be inoculated, always desire to have a smaller dose. I do not think suspicion ever did arise in the Punjab or elsewhere on this account. The doses prescribed in former times used also to vary, *viz.*, between 2 c. c. and 7½ to 10 c. c. In individual cases, they varied much more, persons being often inoculated with 1½ or even 1 c.c. for various reasons.

Though the dose was small, we supplied the same size of syringe, first, because we keep a standard size, and it is important that the constituent parts of the instruments should be interchangeable; and secondly, because the ordinary syringe can quite well be used for the small dose. If the Punjab Government had wanted bigger doses, it could have been done in the water-agar prophylactic simply by adding more water; but of course the number of small bottles which were available for bottling the material would not have sufficed; an addition of some five lakhs of them was required for material of a 5 c. c. dosage.

I expected, and the facts, I believe, have already proved, that the effect of the water-agar would be a smaller reduction of case mortality, but that there would be little difference, or possibly, or even, I thought, probably, an improvement, in the incidence of attacks.

I considered that the smaller reduction in case mortality would be the result of the absence of the supernatant fluid.

On this point I do not think there is a single expert who shares my view. The almost universal view in published reports is that the water-agar process is to be preferred.

So far as it controls the incidence of attack, I agree with the general view that the water-agar fluid is, at least, as efficacious as that which contains the supernatant fluid, for it contains the more important constituent of it, and that in a better condition. Apart from these *à priori* grounds for my opinion, I rely on a number of experiments made on animals, on the operations in Formosa, and of course also, by comparison, on the inoculations against cholera. Besides that, as regards the safety of the material, members of the staff have been inoculated, and there I have had an opportunity of first observing the reaction.

I got information as to the experiments on animals from the German Commission's Report and the Indian Plague Commission's Report, in addition to the experiments which have been made here.

I have sent the water-agar fluid to other parts of India besides the Punjab; I have received reports from most of the correspondents to whom I have sent the prophylactic.

The result is that out of the whole number of correspondents to whom we sent that prophylactic, in September—October, 42 in all, some 30 have replied to our inquiries. Except in two cases all have said they observed no mishaps of any kind.

Of these two exceptions, one is Lieutenant Mathews, I.M.S., in charge of the 10th Bengal Lancers, Cawnpore, who states he had six abscesses in about 5,000 inoculations, and that 179 other persons inoculated with the same brew had no abscesses. The other is Captain Walton, I.M.S., Cawnpore, who observed three abscesses out of 5,390 cases. He does not state whether others were inoculated from the same brew. In both instances the abscesses were very mild and easily healed up.

I will furnish you with copies of all these reports.

As to the liability to contamination, the manufacture of water-agar is simpler and involves less manipulations than the standard process, but I do not attribute much importance to this point. The difference is that the carbolizing manipulation is absent from the water-agar process and therefore involves one opening less. Besides that in the standard process cultivation goes on for six weeks instead of the two to six days in the water-agar, and in a mois climate like that in Bombay this is a matter of importance.

I considered heating the water-agar fluid, *after* bottling, to 65°—70° C. for an hour, a sufficient, if not a preferable, substitute for the carbolizing *before* bottling, up to the time of corking, and including this, the water-agar was less exposed to risk of contamination. It may be that in heating the issuing bottles of water prophylactic for sterilization there is a risk of corks, if not properly fastened, becoming loose, owing to the pressure caused by the heating; but firstly, we have provided for that by fastening the cork with a metal collar before it is subjected to heating, and secondly, the prophylactic is exposed to the risk of loose corks from exposure of the box for hours on a stretch on a railway platform in the sun to, I believe, quite a similar amount of heat; even in the railway van, on the journey up-country, that risk exists in certain seasons. The water-agar fluid would be equally exposed to this; and an additional hour in the sterilizing tub would make only a relative difference.

Question.—Do you not think that the omission to carbolize did not increase the risk of contamination?

Answer.—The addition of carbolic involved an additional opening of the flask and, as we thought then, one additional transference of the material, and to that extent involved a further risk of contamination. The comparison stands thus up to the time of ultimately bottling the material and of sterilizing it if the corking is done correctly.

But admitting that both prophylactics had been prepared equally asep- tically and that contamination occurs subsequently, then a difference will occur to the following extent :—

(*a*) Half per cent. of carbolic lotion admits a very large proportion of contamination: thus in a carbolized prophylactic prepared by a better agency and only corked with defective corks, the Indian Plague Commission have found 22·5 per cent. of bottles contaminated (*see* their Report, page 188, Volume V). I have found by experiment that half per cent. of carbolic does not restrain the growth of microbes floating in the Indian air. If I were to expose in Bombay 20 wine glasses filled with sterile broth carbolised with half per cent., every wine glass will become turbid from the development of bacteria, which will indicate failure of preventing growth.

(*b*) A certain number of microbes will, however, be prevented from growing, and others will be killed. It is probably the case that those which resist the carbolic and survive, *i.e.*, for which the addition of carbolic is useless, are the harmful ones.

Question.—On what do you base this?

Answer.—It is the spore-bearing bacilli, like the microbe of tetanus, anthrax, malignant œdema, that resists the operation of half per cent. carbolic; the tetanus microbe would probably live in such a solution for very many months; I do not, however, know that it would multiply in such a medium, though it is not impossible. Also some harmful non-sporing bacilli, like typhoid, would survive, and some grow in a much stronger carbolic solution than many harmless microbes would. This is even one of the methods of isolating typhoid bacilli from harmless water microbes. I would refer in this connection to the Indian Plague Commission Report, page 188 ("It well may be").

It is a further circumstance in favour of the water-agar that it is a much less nutritive medium than broth.

At first, when I worked by myself, I did not use carbolic, notwithstanding the fact that I did not heat after bottling but before bottling. It is a method by which one seeks to meet one portion of accidental failure, *i.e.*, contamination by non-resistant microbes.

Later, I had recourse to the addition of carbolic to minimise contamination: it is a safeguard, but only a safeguard to a very small extent. I used it, when the preparation had to pass into the hands of others. It was a means of covering a part of the results of a possible slip. This, or a similar process, is futile, when the agency or appliances are less satisfactory. I refer again to the 22·5 per cent. of non-sterile bottles, found by the Indian Plague Commission, in *carbolised* brews, when corked with ordinary corks.

I omitted the carbolic in the water-agar process, because the prophylactic was heated owing to certain technical necessities, *after* being bottled.

The heating with carbolic is undesirable (*see* page 186 of Indian Plague Commission's Report).

To have carbolized after heating would have involved opening each bottle.

To heat while the emulsion was on the agar might, as we then thought, have melted the agar; I have since found that this is not so, when the proportion of agar is so high (3 per cent.) as we use it in this Laboratory. To remove the fluid from the agar, before bottling, would have meant an additional exposure.

I heated after bottling, and so, in my opinion, followed a procedure not less effective than carbolizing before bottling.

The heating, like carbolizing to half per cent., was not sufficient to destroy spores of tetanus microbes, and it would not have restrained their subsequent growth. I cannot say that half per cent. carbolic would not have restrained their subsequent growth. I cannot say one way or the other. I know that it would not have affected tetanus spores and would not have restrained the growth of many other microbes.

I am unable to say whether a bottle filled in the usual way with plague fluid is favourable or not to tetanus growth. I would, for growth of tetanus, endeavour to establish anærobic conditions. The tetanus microbe is not strictly anærobic.

In November I did return to the antiseptic plan as a substitute for heating after bottling. It was to meet an objection based on our having changed; and also the necessity for the other plan has ceased as soon as we were in a position to give up the water-agar process.

It may have been an imaginary objection, but the whole outcry was against our having "changed." I did not think there was much difference between the two plans.

It was not because I thought the antiseptic plan *safer* that I returned to it. The method of working is and must be such as to make the risk of contaminating with extraneous microbes practically worthless.

Even if I had added the half per cent. carbolic to the water-agar, there is no reason to think that, taking the operations as a whole, the proportion of contaminations would have been less. As a matter of fact, I know that that would not have been the case. I have actual facts showing this.

Even assuming for the sake of argument that the tetanus in the Malkowal bottle had been introduced in this Laboratory, I do not think the addition of a half per cent. carbolic lotion would have made a difference in the results, because to cause tetanus an inappreciable quantity of microbes is required. Dangerous microbes do not float about singly. A particle of dirt is required to contaminate a bottle with dangerous microbes, not a microbe floating in the air.

Half per cent. solution of carbolic may tend to check the tetanus *growth*, but its practical effects would be *nil*. I cannot accept as a general proposition that length of time would increase its effect.

Tetanus not being a strict anærobe does not suffer much from the admission of a limited quantity of air. I would not regard the presence of half per cent. of carbolic lotion as *favourable* to the growth of tetanus bacilli. It is on the contrary likely that the growth would be restrained.

If reasoning of this kind, in which account is not taken of the degrees was to decide as to what is admissible or not in practice, then there should be no bacteriological product issued for hypodermic injection without containing half per cent. carbolic lotion, or some equivalent antiseptic; as a matter of fact, bacteriological products are largely issued without antiseptics.

Calmette does not carbolise his antivenene.

Looking at it as a practical question, the new prophylactic without its carbolic acid, but heated after bottling, is not more liable to contamination than the old.

The general principles and the methods of sterilization in regard to apparatus, media, etc., in connection with the new prophylactic were the same as those applied to the old prophylactic; and where there was deviation, as for instance the ultimate sterilisation by heating the bottles in collars, without carbolising, we had our previous experience in the preparation of anti-typhoid vaccine which was not contaminated. The difference between the amount of contamination in the anti-typhoid and anti-plague prophylactics is to be attributed only to the difference in the workers.

The prophylactic issued was contaminated * and to a considerable extent. Putting Malkowal aside, that non-sterility was harmless as proved by the results, I myself was party only to recalling one brew. Major Bannerman can probably tell as to the recalling of the rest, and can tell the special reasons in each case.

* Should be "non-sterile," in the bacteriological sense.
W. M. H.
2nd February 1903.

I determined in consultation with the staff to adopt the broth-agar prophylactic. Major Bannerman and I generally decided as to the *purity* of the brews, assisted sometimes by Captain Greig, I.M.S., and Major Bannerman assisted Kapadia, but never Kapadia alone decided and testified as to *sterility*. The general technique was prescribed by me.

I never passed brews for sterility, but it was always an officer of the superior staff appointed specially for that duty.

The Government of Bombay was not told of the water-agar, which was intended only as a temporary substitute, but only of the broth-agar; this was for the reasons I have already stated. So far as the Punjab Government is concerned, Wilkinson has seen the water-agar process a week after it had been started in preparation, and before it was sent out or they had begun operations in the Punjab.

26th January.—It was suggested by the Indian Plague Commission that the plague prophylactic should be re-sterilized at a temperature of 60° C. after it has been sealed up in the bottle for issue.

This was published in the *Bombay Government Gazette Extraordinary* of 13th March 1900, as a summary of the Commission's opinions, and forwarded to me, for information, with the Government Resolution no. 1714-P. of 14th March 1900.

This perhaps serves as an additional justification for heating the material after it was bottled. Immersion in cold water is an essential step. In the same paragraph of the Commission's Report there is a recommendation to reduce the dose; there or in another place, they insist that the dose should be reduced as much as possible.

It must be borne in mind that "contaminated" as used by a bacteriologist has not its popular meaning of being tainted with harmful elements; but means "not sterile." I may summarise my remarks by stating that what our staff was adequate to do in September and October was to prepare prophylactic *free from contamination*, but not a sterile product. I maintain that we did not issue a bottle which was contaminated, in the meaning of being tainted with harmful elements.

At the same time it is certain that it is desirable not to issue a single non-sterile bottle, for the following reasons, first, non-sterility is likely to impair to a certain extent the immunising properties of the material; and, secondly, by using that misleading term of the bacteriologists, it is possible to frighten those not aware of its specialised meaning, and this is illustrated, if I may be permitted to say so, in the present case. Whether I was justified, under the circumstances of September—October last, in issuing this prophylactic, I would refer to paragraph 43, page 16 of the same *Bombay Government Gazette*. The Commission will see that this reference is of much importance. My letter referred to in that paragraph is printed in Volume III, page 645 of the Plague Commission's Report.

At a time when very great pressure of work was caused at the Laboratory, by the outbreak in the Southern Maratha country, in 1898, and the brews issued, though carbolised, were to the extent of 22·5 per cent. of the bottles, non-sterile, the Indian Plague Commission recorded, on page 17 of the above *Government Gazette*, after an enquiry made throughout the whole of India: "We have not had any evidence laid before us which goes to show that any "serious ill-consequences have resulted from the defect in sterility spoken of "above."

I would, in this connection, refer also to Dr. Hornabrook's evidence as contained in an article by him published in the *Australasian Medical Gazette* of 20th December 1902, a copy of which I will furnish. (We have seen the original.)

In the present case at least 100,000 injections with the new fluid have been made in the Punjab and 20,000 elsewhere in India. A large number of bottles were non-sterile. Yet here was not a brew contaminated in the sense of tainted with harmful elements.

Question.—Can you say how far the absence of harmful results was due to rejection, or in other words to the vigilance of the inoculating officers?

Answer.—The following is against this:—

(1) A large number of non-sterile brews do not physically reveal themselves as by emitting smell or altering the appearance of the prophylactic.

(2) In the case of actually "rejectible" brews, there was inoculation done without harmful results, as appears in the evidence.

(3) The officers rejected a smaller proportion of brews than on investigation here were found to be non-sterile, for we found non-sterility in up to 50 per cent. of bottles.

In no instance were harmful contaminations discovered in the Laboratory. We always tested vigorously for sterility, and rejected *all* non-sterile brews without reference to the harmfulness or harmlessness of the contaminating microbe. We tested only ærobically.

Extract from a contribution on "The Advantages of Inoculation with Professor Haffkine's Plague Prophylactic" given by R.W. Hornabrook, M.B. M.R.C.S., Adelaide, S.A., late Special Medical Plague Officer, Government of Bombay, and Health Officer to the Chamber of Mines, Johannesburg, in the Australasian Medical Gazette *of 20th December 1902, no. 255, Vol. XXI, no. 12, page 619.*

"During my plague work, I have done over 15,000 inoculations; in one case only did an abscess follow; this was in a woman who immediately after the operation went home and applied a cowdung poultice to her arm. I have never seen a patient seriously ill from inoculation, and in Dharwar we used to inoculate all ages from infants of one month to old people of 80 years."

"Dr. Alice Corthorn, who worked with me in Dharwar, in that town alone did some 14,000 inoculations with only one abscess; since then she has done tens of thousands of inoculations with the same amount of success. The late Captain Leumann, I.M.S., who worked at Hubli, a town a few miles from Dharwar, performed over 30,000 inoculations without any serious results to the health of the inoculated."

There might have been anærobic growth without our discovering it. Anærobic tests are however applied in no Laboratory, so far at any rate. In this Laboratory we used to inseminate in deep test tubes of broth, where certain possibility of anærobic microbes growing exists.

I would ask Major Semple whether he anærobically tests the spinal cords used for antirabic fluid.

(Major Semple says he tests every cord, but not anærobically, because the conditions practically exclude the possibility of tetanus being present.)

No brew was sent out which was non-sterile to our knowledge: whenever non-sterility was discovered we immediately recalled. Information received from the Punjab led us to institute a searching investigation and to test every bottle: it involved a complete cessation of the work in the Laboratory.

We thereby discovered that to test one bottle out of a brew, as approved by the Plague Commission, or even the far more rigorous test which we actually applied, was not sufficient. The Plague Commission referred to brews containing 60 to 70 bottles each. The water-agar brews contained 3 or 4 bottles each. We applied therefore a test 15 times more complete and still failed to effectively eliminate spoilt brews. That pointed to the untrained workers failing, from the bacteriological point of view, in all departments.

Carbolic solution was not added to the anti-typhoid fluid to which I referred above as being successfully prepared by sterilizing in water tubs *after* bottling.

I have never discovered tetanus in any of my cultivations, either here, in Paris, or elsewhere.

As between the use of the syphon and of the pipette for removing the fluid from the agar flasks, I think there are advantages on both sides.

In fact we adopted the pipette as a result of satisfactory observations in the course of our former operations, and of a direct experiment by Dr. Maynard.

At first I was in favour of the syphon; but subsequently, on demonstration by the staff, I modified my view. The decision to adopt the pipette was arrived at jointly by Major Bannerman, Dr. Gibson, and myself, after our having inspected the result of Dr. Maynard's work.

It was demonstrated that the flow could be regulated with certainty in the pipette. Experience in the Laboratory shows that the pipette required no more skill than the syphon If experience had shown otherwise, I would have used the syphon.

I mentioned on Saturday that I had not told the Bombay Government of my change to the water-agar process for reasons already stated; those reasons are briefly these:

Our deliberate plan was to issue bodies of microbes as grown on agar, mixed with the "supernatant fluid" for obtaining the requisite supernatant fluid, as described in my letter to the Government of India, no. 260 (*a*), of 7th September 1898, two to four months was required According to the broth-agar method, as adapted to the Punjab demand of June last, at least 10 days to a fortnight of manufacture alone was required. In this I do not include 10 days to a fortnight for testing. The inoculations in the Punjab were to begin on the 1st October, the material was to be sent from here not later than 28th September. The ultimate testing was to commence on the 18th; and by that time we had only a small quantity of supernatant fluid prepared.

As a temporary measure, one of those which are constantly employed in laboratories to meet emergencies, we decided to do, in a portion of the brews, without supernatant fluid, considering the disputed significance of it. In antirabic operations the prophylactic is ordinarily prepared from partially desiccated spinal cords, and made up from these the day the requisite desiccation is accomplished and the material is used; but to meet emergencies a reserve of glycerinised cords is kept, and recourse is had to this in case of necessity if the animal which is to furnish the cord dies from a mist infection. It would not be considered necessary to tell the applicant about the substitute used or the reason for it. Moreover, Wilkinson was here a week after preparation began, and he saw what he was to use before the material was ready for despatch.

Question.—Where do you suggest the specific contamination which caused the deaths at Malkowal was introduced into the fluid used for inoculation?

Answer.—I would like at the outset to separate in the Government of India's Camp, no. 6, of 1st January 1903, the last two issues from the preceding 12, by pointing out that it is only in those that it is proper to speak of contamination in its ordinary sense, the other paragraphs refer to non-sterility in the bacteriological meaning of the word, which has no reference to harmfulness.

All the information in my possession at present points to the fact that the tetanus contamination was introduced *after* issue. I refer to the following facts:—

(1) Major Semple observed that when he examined the remnants of the fluid microscopically he found a couple of microbes in a field, in another none, in another a few, this was a satisfactory culture, seeing that the microscopic slide was prepared from a fluid culture. In such slides, under the best circumstances, only few microbes are seen. In such a satisfactory culture you would expect the characteristic smell, and that was observed by Major Semple. Dr. Elliot says when *he* opened the bottle there was no smell. If it had been contaminated in Bombay, by the time it reached Malkowal the culture was complete, because it is generally complete in a few days. There was the whole mass of contaminated fluid when Dr. Elliot smelt it, and only a few drops when Major Semple detected the smell.

(2) Perhaps, however, Dr. Elliot had a cold, which was not the case; and for that reason that test failed.

In view of this it becomes instructive to observe that his syringe apparently was not contaminated.

This seems probable from the fac that he afterwards used his syringe without harm; he did so very shortly afterwards, according to his statement in the laboratory and none of his subsequent patients got tetanus. The carbolic treatment to which he subjected his syringe was not enough to ensure the removal of the tetanus contamination if it existed in the bottle to the extent to which it did when Major Semple saw it.

I take his procedure as described in his evidence, *viz.*, the rinsing of the syringe with 5 per cent. carbolic lotion; I will further assume that a second measure is applied, *viz.*, filling the syringe with carbolic lotion and leaving it filled until the syringe has again to be used.

Squirting out a sterile fluid, not a real antiseptic, will not remove contamination from a syringe.

Spores of tetanus require 10 to 15 hours of the action of the solution of carbolic, 1 in 20, for depriving them of the power of cultivating, without speaking of depriving them of their power of causing disease, which in some cases is obtained only after further action.

His syringe could not have failed to be badly contaminated if the bottle was contaminated to the extent to which Major Semple saw it to be; and, if so, the procedure of sterilisation was not enough to ensure the latter.

(3) Also if there had been a tetanus growth, it is probable that the cork on opening the bottle would have come out with a pop and attracted attention. And lastly (4) though on this point I am not so certain; if the growth had been going on for five or six weeks a considerable amount of tetanus toxin should have been developed in the fluid, and we might have expected the tetanus symptoms earlier.

The above refers to the possibility of tetanus having been introduced in Bombay in September 1902.

When you ask me to suggest the actual source of the tetanus poisoning, I can only give you hypothetical conjectures, and should rather have liked to abstain from making any.

However, the needle may have been contaminated. As making this possible, I refer to Major Semple's tetanus nib. The tetanus might have remained in the needle, though it was put into hot oil as described by Dr. Elliot.

Question.—Do you think there could have been on the needle a sufficient quantity of tetanus microbes to affect all the 19 people ?

Answer.—It is admissible ; no experiment has been made on man, but man is probably as susceptible to tetanus as a guinea pig is to anthrax ; and I have been taught that it has been found by experiment that one bacillus of anthrax injected into a guinea pig is sufficient to give the disease.

Question.—Do you think the microbe would have resisted hot oil ?

Answer.—There is a temperature at which water would splutter on hot oil and yet not be sufficient to kill dry tetanus spores immerged in the oil.

I said that had tetanus microbes been in the bottle, in the proportion in which Major Semple found them subsequently, the microbes would remain in the syringe though the syringe was squirted out with a 5 per cent. carbolic lotion.

At least 10 hours are required to deprive the tetanus of its power of growth in artificial media. After 10 hours of submersion in 5 per cent. carbolic, Kitasato found, however, that the spores retained their virulence when injected into animals.

Therefore the use of carbolic for the purpose of rinsing a tetanus-infected syringe would, so far as sterilization goes, be equivalent to the use of sterile water or broth.

If a bacteriologist were offered a tetanus-infected syringe, and it was suggested to him to make it safe by rinsing it out with sterile broth, there would be a universal consensus of opinion that it would be impossible to do so.

If there were numerous plague microbes in the bottle they were brought into the syringe from it. Some would necessarily adhere to the interior walls of the syringe.

I would refer to the experiments mentioned at page 15 of Volume 1 of the Indian Plague Commission.

There is reason to believe that man is at least as susceptible to tetanus as rats are to plague

To judge of the extent of the theoretical or practical possibility of the tetanus contamination being introduced into the fluid in the course of the laboratory manipulations, one must have regard not to the manipulations alone, or to the abstract possibilities which they may present, but also to the tens of hundreds of thousands of doses issued from the Laboratory and to the present one being the first instance in which tetanus occurrence could be imputed to the Laboratory ; and in this imputed case there are the strong grounds to which I have referred for not attributing the tetanus to the Laboratory.

Question.—Supposing no precaution of any kind were taken, would there be the chance of tetanus appearing in the fluid ?

Answer.—Theoretically it would appear as if there would be the greatest possibilities of tetanus; and all our manipulations are calculated to obviate this. Nevertheless in examining actual facts the surprising result might have appeared as found in the history of the application of small-pox vaccine, in which bacteriological sterility does not exist, and, one may say, is practically even not aimed at. If I want to be absolutely certain, I cannot give any other answer.

The fact that Major Semple found tetanus microbes in the bottle does not qualify my opinion as to the probability of its introduction in the Laboratory, because the reasons I have given seem to me to exclude the possibility of this.

I, of course, cannot say how the tetanus microbe can have got into the bottle so as to be in it when examined by Major Semple. If I pursue the same hypothetical guess, I might say it may have come from the needle.

Just now I cannot account for the fact that only those, and at the same time all those inoculated from the same bottle were attacked except by referring it to the needle. But of course other guesses may be forthcoming.

If the needle was changed, it would overthrow my theory to that extent.

As to my answer above I wish to make it clear that the microbe, having been placed into the fluid by the needle, would develop in the remnants of that fluid.

The micrococci found by Major Semple using up the oxygen, create conditions favourable for growth of anærobes. I would refer, for instance, to the experiments related in the "Centralblatt fuer Bacteriologie," Volume XXXII, nos. 8-9, page 572 But this is a known fact.

27th January.—The history of 53-N. as given in my letter of 29th November is correct

Question.—Paragraph 9 contemplates the Laboratory as a possible source from which contamination may have occurred; do you recede from that position?

Answer.—I meant to enumerate the items under which the question was to be examined. When I first heard of the 19 deaths my first thought was, the whole responsibility falls on me!

I did not consider it to be my part to search for the fault elsewhere.

I thought it possible, and analysed the matter from that point.

Question.—Does not paragraph 13 point to a practical possibility?

Answer.—That was a practical possibility.

I do not say that the hypotheses presented in paragraph 9 were idle or absurd.

Either (2) or (3) were practical possibilities.

I could not say that hypothesis (1) was impossible.

But in saying "practical possibilities" it seems to me, one must take into account to what extent they actually *occur* in practice and in this, as I said, I appeal to the millions of doses that have been issued, and to the absence of tetanus throughout.

The precautions for sterilising the syringe by carbolic acid taken by Dr. Elliot between every two brews, would not have ensured subsequent freedom from tetanus microbes if these were present in such a considerable proportion in the first brew.

Precautions that would ensure complete sterilisation of a syringe are to keep the syringe filled with carbolic lotion, 1 in 20, for 24 hours, the needle being kept wrapped in a wet cotton pad for the same period, or fill the syringe three or four times with smoking hot oil having a temperature of 170° to 180° C.; and to keep needles submerged in oil for a similar period. Of course only the hot oil method would be applicable for sterilising syringes in the interval between various brews while inoculation is going on.

The reason I gave yesterday, based on the impossibility of disinfecting the syringe with carbolic, was not mentioned in my letter of 29th November, as, excepting the absence of smell in the bottle, the details of the operation were not accurately known to me.

My statement in paragraph 14 "this conjecture has only the following on its side," referred to the possibility of contamination at Malkowal; and I thought it right to make the statement with as little assertion as possible.

It was not because the reason as to the syringe was improbable, but because I had not the complete series of facts before me, that I omitted to analyse what happened in Malkowal.

Equally with the possible sources enumerated in paragraph 9 of my letter of the 29th November, possible defective original sterilisation of the issuing bottle deserves investigation; the probability of the cork becoming loose in hot water is deserving of investigation; together with the fact that the bottle was afterwards immersed in cold unsterilised water. It is admissible that tetanus may be found in ordinary water, but I am not aware that it has been so found. It is not a medium in which you would seek for it, as you would for typhoid or cholera. However this may be, the objection to the tetanus contamination having been introduced in the Malkowal bottle in the Laboratory stands independent of these possibilities.

Having regard to the fact that the dosage is in my writing, I do not think the Malkowal bottle was the tested sample bottle, though I originally thought the reverse. On enquiry I find that the arrangement of sending up, for marking doses, the sample bottles only began on 2nd October 1902. If not the sample bottle, it could not have come into the hands of DeSouza.

Stephens did not pipette; he syphoned.

Question.—Do you think a fortnight was a sufficient training?

Answer.—We did not rely on subjective observations alone, but we put men on to decanting sterile broth, and observed whether they did not spoil it in handling. I think Stephen had still to be taught, but his deficiencies were not serious.

I would like to revert for a moment to the possibility of the tetanus microbe being in the cold water, and to point out the following:—

We use lake water from the tap, which is of course open, theoretically, to tetanus contamination; but it is not water, but dung and garden soil, that are the natural habitat of the tetanus microbe; I do not know of instances of tetanus bacilli having been discovered in water; with the method we prepared in September and October, at least 150,000 doses of prophylactic were prepared, and at least 120,000 were actually injected; and out of all that number the only suggestion of tetanus is in respect of the Malkowal bottle, and that is the case under investigation.

MAJOR BANNERMAN, I.M.S.

I am the Superintendent of the Laboratory, and have been so since February 1900; I had been in charge from some time previously. I have been connected with the Laboratory since February 1897.

By the Government of India's letter of 8th February 1900, it was intimated that I was to be styled Superintendent of the Laboratory, and that the details of our management would be left as far as possible to me.

I was responsible for the discipline of the Laboratory, and superintended the work.

I superintended the training of the new workers in the decanting department and other departments of that class.

As a result of the Punjab scheme, it became necessary to employ a much larger agency; both the superior and subordinate staff had to be increased. We asked for 35 soldiers, 2 non-commissioned officers, and 5 doctors.

I was not here when the Punjab scheme was started: I arrived on the 28th of June.

I was concerned with training of the subordinate staff; the rest was supposed to be trained, but they had to be shown many things.

The soldiers and non-commissioned officers did not begin to come here till the 17th October.

The superior staff, too, did not arrive as soon as they were expected.

In the absence of the staff requisitioned, we engaged a number of clerks as decanters; since the Laboratory was started that is the class of men that has been employed for decanting. These clerks were also employed on transferring and testing sterility.

The new clerks were subjected to the same training as the old hands, and I think for the same length before they began to operate on the fluid sent out. It takes 10 days or a fortnight to train one of these men to decant properly; I think at the end of that time a man can decant with safety; in fact he must be for since 1899, that process has been in use, and the percentage of contaminated brews has been very small; the exact percentage is stated in my pamphlet.

In the Punjab scheme the percentage of contamination rose very considerably. I do not think that this rise in the percentage of contamination was due to the new staff that was engaged; a large number of the old staff was employed on this very process.

The contamination prior to the Punjab scheme was one in every 500, and that was discovered in the Laboratory.

We are now preparing two kinds of fluid, one the standard fluid, and the other broth and agar mixed, we have been supplying the standard to the Punjab since November. I think the present percentage is 3 per cent.; it is improving; you can't fairly compare the two periods, by reason of the change of the method of testing. I think the soldiers are better than the old agency; they learn quicker, and they do what they are told, and are more reliable.

A soldier would learn to decant in a couple of days.

I was present when the letter no. 1 (Confidential), dated 31st October 1902, was written; I helped Mr. Haffkine to write no. 4 (Confidential), dated 8th November.

The letter of the 31st October points to the defective agency as being responsible for contaminations.

I don't agree with this view; I did not protest against it at the time. I believe I told Mr. Haffkine I did not agree, but I could not swear to that. I agree with the statement in no. 4 (Confidential), dated 8th November, as to a lack of skilled workers.

I do not agree with the statement that the proportion of contamination was due to the insufficiently trained workers.

I helped Mr. Haffkine to write that letter, and I remember that part being written; I may have helped to write that part. I did not represent my view at the time. I don't think I protested against using those words. I don't think I told him I did not agree with him. The draft of the letter of the 8th of November is largely in my writing. The corrections are in Mr. Haffkine's handwriting; the words insufficiently trained workers are in his handwriting. I never saw the letter of the 11th September; though the clerks are not highly educated, they are the same as we have had throughout.

Before a new worker is put on work which is to be supplied outside, his work is examined, and according as it is good or bad he is selected. I saw the work done myself; I examined the bottles; I was constantly in the room. Pansare expressed an opinion on these men.

In my opinion the staff was qualified to carry out the work according to the old method.

Question.—Were they qualified to carry out the method adopted in September and October?

Answer.—That is a difficult question to answer; I trained them to carry out the old method; I began to train them at the beginning of August; the batch in which Stephen was, was engaged in September.

I don't think I helped in writing the letter no. 1642, dated 31st July.

The departure from the standard process was arranged in June; Mr. Haffkine told me when I came out.

I did not train the clerks for this transferring process of manufacture as I depended on the soldiers. I trained them to decant by syphoning; ultimately we trained them to transfer. I think they were qualified, but the process was objectionable; and in the end it was given up, only a small proportion was sent out.

We used so much time in experimenting that we were driven to use the water-agar to supply the Punjab at all. There is no transference in this process, so that objection was removed.

The water-agar process was open to the objection—the omission of the carbolic; but owing to the magnitude of the work it was considered impossible to add this. Mr. Haffkine proposed the water-agar; I expressed surprise to him when I found that carbolic was to be omitted, but he argued that we had the sterilizing process of heat. I did not express any opinion to Haffkine at the time as to what should be done.

So far as the consumer was concerned the staff would have been qualified had the fluid been carbolized. I do not think that any staff would have been qualified to carry out any process on the scale we worked here without carbolic. It could not have been done as we worked before the Punjab scheme. When I came here first no carbolic was used, but Mr. Haffkine was working alone in a closed room. Working with a big staff, it is in my opinion impossible to work safely without carbolic.

I think carbolic would have controlled the amount of contamination.

We used half per cent. solution, and on the grounds of experience I think it controls contamination.

I have not been able to form an opinion as to whether half per cent. solution would control tetanus microbe.

I do not think the ultimate heating in the issuing bottles is a sufficient substitute. In my letter of the 15th September, I was referring to broth agar. I believe in the supernatant fluid, but my chief objection to the water-agar is the difficulty of non-sterile manufacture.

I have formed no opinion as to whether carbolic would control the growth of tetanus more than heating.

I remember Wilkinson's visit in September. I think both processes were going on, and that Dr. Venis and Dr. Maynard and some of the decanters were working at the transferring method. I am certain he was shown it; I think he was told that this was the process under which the prophylactic would be supplied; the other being a makeshift.

I am not certain whether he was told the water-agar was being manufactured temporarily, but I believe he was.

If Captain Wilkinson saw decanting he must have seen the water-agar. Nothing was kept back from Wilkinson. I think the heating in issuing bottles and subsequent immersion in water involves the risk of the suction of the cold water with any microbe it may contain into the bottle. I am going to experiment on this to-morrow.

I am aware of recalls of brews; most of these arose from errors in the office, *e.g.*, uncertainty as to brews to which test tubes referred; one was despatched before the test was complete through an error of despatching department; lately one was recalled because it was a brew not intended for the Punjab.

Tetanus has never been discovered in this Laboratory in fluid sent out. We now test for anærobes, but did not do so before.

Such a thing as tetanus never entered into our heads.

A bottle might have escaped being put into the steriliser, but that was very unlikely, and so the tetanus might have been introduced. It might have

been at the decanting that it got in, if the cork was dropped; I have seen that done, and at once dismissed the man, but I don't think Stephens would have done it as he was an intelligent boy. I think it was not a sample bottle, but Kapadia would know. DeSouza would not handle it unless it was a sample. If it was a sample bottle there would be the risk there, but DeSouza is a very steady worker.

If there had been toxin the tetanus might have been expected to set in earlier, but it is doubtful whether in such a fluid there would be much toxin.

I believe Dr. Gibson manufactured an agar and broth fluid for the Punjab on a former occasion, but he will be able to tell you.

If the door is open to harmless microbes it is also open to harmful ones; the only difference is that there are less harmful microbes than harmless ones.

It is not a fair comparison to compare small-pox vaccine and plague prophylactic. It is not possible to compare the presence of microbes in plague prophylactic and in food.

I think the change to water-agar ought to have been notified, though there are changes which need not be notified; I do not think changes in technique need be notified. This was a change in principle. By the removal of the supernatant fluid I think there was a change in principle. I think as Director I probably would have notified.

I did not know Mr. Haffkine had not notified the change to the water, nor did I know he had. This was a matter that did not fall within my province. One man might notify and another might not; it was a matter of individual opinion.

I do not think Mr. Haffkine had any object in keeping back the use of the water-agar fluid.

If we had kept to the old process we could have met the Punjab demand.

I think the agar process is more economical.

I think the change was a mistake under the circumstances.

28th January.—Assuming that the syringe was filled with prophylactic containing tetanus germs in such quantity as to cause the 19 deaths, I do not think mere rinsing with 5 per cent. carbolic would make the syringe safe to use again. If the syringe were used immediately I do not think it would be possible that some of those subsequently inoculated should not also be attacked.

Though I do not wish to express any positive opinion, as I have not made any experiment, still in my opinion the fact that those subsequently inoculated escaped does point to the possibility that the syringe did not contain fluid contaminated with tetanus. I would not like to say that the rinsing would remove all trace of tetanus: no one could express a positive opinion on this without experiment, but in the absence of experiments my opinion would be that the rinsing would not remove all trace of tetanus, and that enough would remain to manifest itself in some of those subsequently inoculated.

I myself have had no experience in experimenting with tetanus on animals. I believe from what I have read that the smallest trace of tetanus is not sufficient in all cases to produce tetanus. Taking this fact I suppose it is possible that though the tetanus was not all washed out it would be washed out to such an extent as that persons subsequently inoculated would not be affected. I think washing with carbolic 5 per cent. would be much more effective, if the carbolic were to remain in for such a length of time as to affect the tetanus microbe; short of that, it would be of no more use than sterile water. If it takes 15 hours to affect tetanus microbe it would be of no use if the carbolic remained in only half an hour or for a whole morning.

I cannot form an opinion as to whether you could rinse out the syringe so as to avoid affecting with tetanus persons subsequently inoculated.

It is theorising and I do not think it would be safe to decide a point of that kind except by experiment.

If tetanus were on the needle, putting it through the man's skin, would tend to wipe it clean.

I think it would be impossible for the tetanus to remain on the needle and deal out tetanus to 19 people: this opinion is not based on experiment. It is common knowledge that the second animal might not be affected: I do not know that I have discussed it with any one.

We have discussed this point.

Perhaps I had better say it is improbable and not impossible.

If the needle were merely washed with carbolic, it would not remove the tetanus microbe, but it would if it were put into hot oil, that is, oil at 160° C.

The result of our experiments was to show that contaminated water-agar fluid had been issued to a considerable extent. We found a microbe which looks like Pyocyaneous: it is commonly found in water; it might have effected an entrance during the cooling process. I do not remember its being found before. It would be the result of expansion and contraction acting on bottles with ill-fitting stoppers.

We thought India rubber corks the best method.

L. JENKINS.

W. B. BANNERMAN.

CAPTAIN W. G. LISTON, M.D.

I have considerable experience in bacteriology at Netley, Glasgow, and here for nearly three years. I was here six months before going home. I was away from the 11th of January 1902 to the 5th January of this year. I think a prophylactic liable to contamination by germs should not be sent out without carbolic acid or some other antiseptic to inhibit the growth of these contaminating germs. I am not aware of any dead bacterial vaccine sent out on a large scale which does not contain a certain amount of carbolic or other antiseptic. I believe if tetanus spores were introduced into a carbolised vaccine, their development would be inhibited although the spores might not be destroyed.

I was surprised when I heard that prophylactic had been sent out without carbolic.

I don't see how you can heat after finally bottling and add carbolic, unless it were done through a rubber cap, or by removal of the cork of each bottle. I would abandon the final heating rather than the carbolic acid.

If the syringe at Malkowal was filled with fluid containing so much tetanus as to have caused the deaths of the 19 people, the question how subsequent rinsing with carbolic would complete the sterility of the syringe would depend first on the number of rinsings and second on the time the carbolic remained in contact with the spores before the syringe was again used.

If there were a very large number of rinsings, it is conceivable that the spores might be washed out. The second condition depends on whether the carbolic had time to kill the microbe. If mere rinsing were done without allowing time for the carbolic to act, I do not think carbolic would have more effect than sterile water. Though the rinsing after the 19 people were inoculated was only with carbolic solution, I do not think those inoculated subsequently to the rinsing would necessarily manifest symptoms of tetanus poisoning. Experiments show that tetanus spores washed free from toxin can be injected into susceptible animals without producing any symptoms.

I can refer you to the text-book in which this experiment is quoted.

I have seen experiments of this class done by Major Semple at Netley and by Professor Wright.

I have not formed a definite opinion as to whether tetanus on the outside of the needle could have affected with tetanus 19 consecutive persons; but I am inclined to believe it would be unlikely that there would be so many spores on the outside that 19 would be affected. I think the spores would have been mechanically removed by insertion in the skin. If the needle was wiped on a contaminated cloth between each separate insertion, the tetanus might have been picked up in that way.

I think the contamination must have come in here. I think it extremely unlikely it should have happened at Malkowal. I think it a striking coincidence that all the persons inoculated from one bottle and no others contracted tetanus.

The door which is open to harmless germs is also open to harmful ones.

L. JENKINS.
W. G. LISTON.

CAPTAIN E. D. W. GREIG, M.B., C.M., ED.; B. SC., ED.

I was assistant in bacteriology and pathology for nearly nine months in University College, London. I have worked here since 10th February last. I was here when the Punjab scheme was undertaken. Gibson, Lamb, and I were called in to his room by Mr. Haffkine and we made our calculations on the basis of the standard fluid and we practically multiplied everything in the Laboratory by 7. Then Mr. Haffkine saw that under the standard process it would take a long time to put out the 70,000 a day in the time, so on the following day we met again and then Gibson brought forward a scheme he had written out by which a uniform dose of 1.c.c. would be provided, whereby he hoped to supply the required amount.

When Dr. Gibson laid before us his scheme, Captain Lamb and I pointed out the difficulty of doing it in a sterile manner. Mr. Haffkine thought the risk we imagined was exaggerated. Captain Lamb also criticised the immunising power of the new vaccine as no supernatant fluid had been made. It was the process described in Column 4. I was not consulted after this officially.

This process was experimentally tried during July and August, and it was found we could not obtain sufficient sterile material; and then about the middle of September I heard of the water-agar process. I do not think at the time any opinion was expressed. I was not consulted.

I thought the amount of handling the material was subjected to increased liability to contamination. I will furnish a written statement showing this.

Besides that, it is not so easy to see impurities in the agar which is unfiltered, as in the broth. Moreover, it was an uncarbolised medium.

I think the absence of carbolic materially increased the risk of contamination for carbolic would have inhibited the growth of a single organism which might have fallen in at any of its stages.

There always is a risk of organisms falling in, both harmful and harmless; the same door is open to both.

I think carbolic might inhibit the growth of tetanus, though it would not destroy it.

I once asked Mr. Haffkine about the absence of carbolic, and he said that in his earlier days he had used uncarbolized material.

He did not consult me.

I do not think the staff in September and October was qualified to carry out the water-agar process, or the Wilkinson process; I think they could have

carried out the old. I am thinking of the decanting stage particularly when I draw this difference.

I told Major Bannerman that the staff was insufficiently trained for the water-agar process: he held the same opinion.

I held this opinion apart from the absence of carbolic.

I do not think the water-agar process without carbolic can be carried out in this Laboratory under aseptic conditions.

I cannot account for Mr. Haffkine following this course.

I am of opinion that the water-agar process should have been notified to the Government.

I do not think it is impossible that the contamination with tetanus should have entered here: you can have no absolute proof of that.

At the same time it may have occurred at Malkowal.

I do not think Stephens could be regarded as fully trained for the process of decanting. I have no particular recollection of 53-N; I always follow the same technique and have no doubt I did so on this occasion.

I think that if the fluid containing spores got into the syringe and was afterwards injected into those inoculated, rinsing with 5 per cent. carbolic would not destroy spores.

I think that any one inoculated after such rinsing would manifest tetanus symptoms; it would not be a certainty. he might or might not.

I do not think it would be right to express an opinion without experiment.

A good deal of the water-agar issued was contaminated.

I think it very unlikely that the needle alone could have been contaminated with tetanus (unless re-infected between the acts) so as to introduce tetanus into 19 successive persons. I would illustrate this by the common experiment for diluting germs by successive stabs into agar; after the second or third nothing would remain.

The microbe might have been in the bottle originally: it might have got in at the watering, the decanting or on the immersion after heating. The cork might be loosened.

I think the decanting or immersion stage is most likely.

L. JENKINS.
E. D. W. GREIG.

DR. GIBSON, M.B., C.M., B.SC., IN EXPERIMENTAL SCIENCES; B.SC. IN PUBLIC HEALTH, ED.

I have had considerable experience in bacteriology. I have been working at it more or less since 1889. I have been in this Laboratory since May 1898.

I recollect the bacteriology of the Punjab; the superior staff was consulted.

The broth-agar was suggested by me between the 14th and 17th June, a variation of it having been already largely used.

About the middle of September it was found we could not carry out this process as originally planned: the agency had something to do with it. We could not devise an apparatus which would be worked sufficiently rapidly and yet be kept sterilized. It was accordingly determined to have recourse temporarily to the water-agar process.

I think it was Professor Haffkine who proposed it.

I had never used it before for plague.

I knew of its being used for typhoid, and plague in Formosa.

I was not consulted as to the water-agar. I approved of it; I was a little surprised because we had always held the supernatant fluid to be of value.

The staff was familiar with the process except the decanting: it was a little more difficult: more labour was involved; the staff could not be regarded as trained, though tested.

I do not think, balancing up the necessities of the case, it was imprudent to change.

I would prefer more training than a fortnight's. I think in previous times an operator was only trained till he could decant a series of non-carbolized broth in an uncontaminated manner.

Prior to this our percentage of contamination was very slight.

The increase of contamination was in part due to the insufficiently trained workers.

The staff was not satisfactory for the operations we had to carry out.

I think, however, regard must be had to the subsequent processes designed to mitigate mistake.

The chief safeguard was heating up to 65° or 70° for an hour, and a larger percentage of the bottles was examined.

The heating I have named would not destroy sporing microbes; therefore their was no absolute safeguard against them in the heating; some of the sporing microbes are harmful and likely to cause death.

The examination of bottles would not show that sporing microbes had not entered those not examined.

Carbolic is a means of mitigating mistake. Carbolic is better than heating to 65° or 70° so far as spore-bearing or any microbes are concerned in so far as it limits or retards the growth.

I do not think the staff was so qualified as we should have liked to have.

It was not qualified to carry out the process with safety from harmless contamination, but it was to carry out with safety from harmful contamination.

The door that is open to harmless contamination is also theoretically open to harmful.

I have no personal knowledge of a Laboratory where carbolic is not used, except that it is never used for small-pox vaccine.

Except in the water-agar carbolic has throughout been used in this Laboratory when the operations have been entrusted to the staff.

I think it was prudent to adopt a process which compelled us to abandon carbolic.

It did not strike me as undesirable: I thought we could carry it out safely.

With the agar process there is a greater risk of not securing sterility.

I do not think we realised that then.

We have no figures to show whether the water-agar process was as efficacious.

I think the water-agar was more liable to contamination than the old: this (apart from the workers) arose from the extra difficulty of sterilizing the agar.

The heating and subsequent immersion might be a source of contamination, but a similar process had been carried out sterilely. I think we would have notified the change to water-agar if it had been permanent.

I think the tetanus must have been introduced after it left the Laboratory for these reasons: the bottle did not smell; the delay in the onset of the symptoms so that it could not have been a rich culture; the syringe used would have been very badly infected and so would have infected other people inoculated. This would exclude the fluid from being the vehicle unless recently contaminated. If it were contaminated within five minutes, there might be no spores.

The tetanus might have been in the carbolic acid; water certainly might have tetanus in it. I think that can be excluded.

The syringe might have been contaminated from the previous time: that is probably inadmissible.

The contamination might have got lodged between the stopper and the neck of the bottle.

The needle might have been contaminated.

I think, if contaminated on the outside, it might have contaminated 19 people. Running the needle into a number of people in succession might not clean the needle of tetanus.

I think the human skin is more effective to clean a contaminated needle than agar. I think the fact by "stabbing" into agar contamination is removed from a needle is not an appropriate comparison, because there the contamination is not dry.

If the same needle had been used subsequently and not put in hot oil and no tetanus appeared, I should say it was not the needle.

If a richly contaminated syringe was used afterwards without harm, I should say it was not the syringe.

If inside the needle, it would be sucked into the syringe.

If the tetanus had been in the fluid, some of the tetanus would adhere to the interior of the syringe.

If the contamination was a small amount, it might be washed out by rinsing, but if a large amount, it would not.

I think the amount must have been small, therefore it might have been washed out by the rinsing.

If the syringe is contaminated with a large amount, though newly, I do not think rinsing would wash out contamination. I have never done experiments with tetanus.

I believe spores alone do not produce tetanus; the rinsing would get rid of the toxin, but there would be something that would take its place.

It is not impossible that the contamination was in the Laboratory, but not probable having regard to the amount of growth.

MAITLAND GIBSON.

DR. N. F. SURVEYOR, M.D., BOMBAY; M.R.C.P., LONDON; D.P.H., CAMB.

I was trained at University College, London, in bacteriology: I have had 10 years' experience.

I have worked with Mr. Haffkine since 1896 off and on.

In this Parel Laboratory, I have only worked from the 19th September 1902.

I then was engaged in the sowing and transferring department. I also tested for sterility.

The water-agar process was then being employed.

Transplanting includes emulsifying.

I am familiar with the standard process. When I came into the Laboratory in September and found the water-agar process, I thought it a change in the right direction on the assumption that it diminished the dose and increased the efficacy.

I thought the subordinate staff at that time was not up to the mark and that it ought not to be employed: it was inferior to what I had seen when I was here before; at that time the decanting was done by medical men.

The staff was certainly not qualified to carry out the work safely: it was most dangerous.

I may point out the danger I refer to: in the decanting department they had to make cultures for testing the flask and to decant cultures still alive; decanting from agar is much more difficult than decanting broth; agar gets into the syphon and there was a pump to drive it out or suck it in I never used.

The flask had to be frequently shaken and the syphon handled and in a room with germs this involved additional risk; there would be no such risk with the broth.

The rooms would contain germs harmful as well as harmless, more particularly as the rooms were heated.

I do not think the men I saw in September could be relied on. I do not think they were men who ever could be thoroughly relied on; though accidents may not have occurred in the past, I attribute that to good fortune; there is the additional circumstance that the risk was less in the standard fluid.

I think if you want to carry out the process safely, you must have trained medical men; you can get medical men at about Rs. 100, and even they ought to be trained for three months.

Unless you can have trained men of the proper stamp, it is better not to attempt bacteriological work at all; if you attempt to work without these conditions you cannot be surprised if accidents and disasters happen.

I think the relative efficaciousness can only be determined by experiments and results.

The water-agar process was more liable to contamination than the standard. First, I think the use of plaster of Paris though mixed with a strong antiseptic was a source of danger, and it was found in actual experience that in the cotton wool placed beneath the plaster there was mould; if there was mould there might of course have been harmful contamination; secondly, the serving was through the tube that ran through the plaster, and this would get loose and sometimes cracked, and this might lead to contamination; thirdly, the method of syphoning from the agar was a danger.

At first I thought the omission of carbolic was wrong, but yesterday Mr. Haffkine pointed out to me that out of six bottles tested by me only one was sterile, though they had all been carbolized.

Half per cent. carbolic would inhibit the growth of several pathogenic germs, but not of tetanus; it would produce a very slight deleterious effect on sporing microbes, but it would be negligible.

My observation of the six bottles leads me to doubt whether the half per cent. carbolic has the beneficial effect I had previously supposed.

I am aware that with the standard process the contamination was only 1 in every 200 or 300 or 500, and that with the water process the contamination rises to 50 or even 90 per cent. I, however, attribute the difference to the quality of the staff and relative difficulties of the two processes rather than to the absence of carbolic.

I have examined 235 bottles returned from the Punjab; 25·53 per cent. were sterile, 72·77 per cent. were contaminated ærobically, while in 1·70 per cent. very probably was anærobic contamination; I have not yet finished my observations on these.

I think the specific contamination that caused the deaths might have been introduced before or after the fluid left the Laboratory; the probabilities are about equal.

A large number of agar flasks bearing the denoting letter N (including 53 N) were inseminated from seed flask bearing the same letter; I have tested two N bottles ærobically and anærobically and found them sterile; therefore the seed flask cannot have been contaminated.

Each of these N flasks was tested for purity and incidentally for sterility from other microbes and that was passed.

Then a sample bottle from each agar flask was tested, but only ærobically. 53 N had other things besides the spore-bearing bacilli, *i.e.*, micrococci, which are ærobic and easily grown; they would have been discovered in this Laboratory.

Therefore 53 N flask probably was not contaminated.

The contamination may have been in the individual bottle: if it was introduced at this stage, then it might be due to the fact that the issuing bottle was insufficiently sterilized or not sterilized at all, or to the faulty decanting or at the process of heating and immersion, though this is less likely.

From what I saw of the decanting I could not say that the technique was so carefully followed as to exclude the possibility of contamination at that stage.

If the corking has been insufficiently done, then the contamination might have got in at the heating and immersion, but in that case detection would have been easier and must have been made by the inoculating staff with ordinary care in the Punjab.

I assume the uncorking was done by the inoculating doctor because it is a most critical part of the whole process and should never he entrusted to the compounder: I would rather trust the compounder with the inoculating than with the opening of the bottle.

Tetanus spore might get in just at that time.

Tetanus contamination getting in at this stage might have so permeated the whole bottle as to affect all inoculated from it; I think this is most consistent with the fact that tetanus did not manifest itself in any case for several days.

This I think points to an absence of a large amount of toxin, and had the tetanus contamination been in the bottle for five or six weeks, I think there would have been a considerable amount of toxin, for though the conditions were not strictly anærobic, oxygen must have been largely excluded and, at any rate, so far excluded as to permit of the development of tetanus bacillus. I say there was not much oxygen because the plague bacillus takes it up.

As a bacteriologist, I consider that the amount of oxygen that there was in the bottle would not have prevented a fairly good growth of tetanus bacillus and that would have produced enough toxins to cause more immediate toxic results.

I cannot accept the assumption that water-agar with a little oxygen is a less nutritive medium for producing a large quantity of toxin as distinct from growth.

It may be you can have a large amount of toxin without luxuriant growth.

I have not experimented to prove this.

I may, however, refer to the fact that tetanus will produce a more vigorous toxin in a medium where a former generation of these bacilli has grown.

Question.—Can you cite authority for this?

Answer.—I would refer you to page 407 of *Technique Microbiologique* by Besson.

I would only say that in questions of this kind you must not assume anything.

There may have been tetanus at the juncture of the cork and glass and that may have dropped in; that would account for the presence of enough tetanus to kill 19 persons.

If tetanus-contaminated fluid got inside the syringe, it is very difficult to say whether all effective trace of it would be removed by rinsing with 5 per cent. carbolic; it is not probable, but it might: the microbes might stick inside the syringe and not affect anybody.

It is possible that the contamination might be on the needle and affect 19 persons, but I do not think it probable.

I have some experience of tetanus.

I have no clinical experience that enables me to say the period of incubation might have been shorter than six days.

I have never done experiments on animals with tetanus. I imagine the amount you inject is important.

I think the change from the standard to the water-agar essential.

I think it so important that it ought to be notified to the Government.

I would not introduce such a change at such a critical time.

L. JENKINS.

N. F. SURVEYOR.

DR. J. S. C. ELKINGTON, M.D., D.P.H., L.R.C.S., L.R.C.P.

I produce a statement which is correct.

I have had a good deal of bacteriological experience.

Theoretically, I would say that half per cent. carbolic would inhibit growth of tetanus, but for how long I cannot say.

I do not think tetanus spores would be expelled from a syringe or needle by a single carbolic rinsing.

Theoretically they might be expelled.

It would not necessarily follow that those subsequently inoculated would manifest tetanus symptoms, but in the great majority of cases I think it would.

I think if tetanus contamination were on the outside of a needle, it probably would not affect 19 persons in succession; it would probably be cleaned by the elasticity of the skin. That would not apply to the inside.

I think tetanus would develop in one of the issuing bottles if it were corked tightly, and the fluid came up to the cork.

It would be a moderate growth, depending greatly on the temperature.

I think it very unlikely that the tetanus could have got in at Malkowal so as to permeate the whole bottle unless the bottle had been opened two or three days before.

The quantity of tetanus that will produce an effect, depends on the bacteriological or chemical or mechanical medium introduced with it.

From the fact that tetanus did not appear for four days, I think there would not be a large amount of tetanus toxin, but there might be a large amount of tetanus that does not produce toxin.

If the tetanus only affected 19 people consecutively, in a series of more than 19, I would say the tetanus was not inside the needle.

I think it is more difficult to convey tetanus if it is washed.

J. S. C. ELKINGTON.

Abstract of Evidence for Commission appointed to enquire into effects, etc., of Plague Prophylactic.

12th January 1903.

J. S. C. ELKINGTON, M.D., D.P.H., INOCULATING MEDICAL OFFICER, PUNJAB GOVERNMENT, ON SPECIAL DUTY, IMPERIAL LABORATORY, PAREL.

1. " First, whether prophylactic lately used in Punjab was as effective as the old." (Telegram from Judicial, Punjab, January 5th, 1903).

(*a*) *As regards reaction produced.*—All cases in which temperatures were recorded by me in connection with inoculation performed in the Punjab during September and October 1903, are embodied in a report forwarded to Captain Wilkinson, I.M.S., Chief Plague Medical Officer, November 21st, 1902. A telegram from Captain Wilkinson informs me that a copy is in process of preparation and will be forwarded to me.

Certain previous experience with the old prophylactic in Victoria during 1900 and 1901 : I have no records with me, but took observations on about 500 of the inoculated. The temperatures attained in these cases averaged about 100° F.

(*b*) *As regards protection conferred.*—The small number of observations made up to the date of my departure from Umballa district, and the comparatively slight extension of plague at that time, prevent me from expressing a definite opinion in this connection.

2. "Second, whether the prophylactic as issued was contaminated, and, if so, to what extent." (*ibid.*)

The number of contaminated bottles rejected by me on account of smell after opening, or occasionally on account of peculiar appearance, excluding cracked or otherwise damaged bottles, increased rapidly towards the end of October. This refers to the date of their receipt by me. The increase was not evenly progressive, but the total rejections were roughly so. Of one consignment some 70 per cent. were rejected. The bottles of dosage of 1 c. c. were most frequently rejected, but they were in greater numbers; 0·5 c. c. dosage also required many rejections. The old prophylactic never, in my experience either in Australia or India, was contaminated in such a way as to give off an unpleasant smell, although I have obtained staphylococci from one* of the original bottles forwarded to Victoria in 1900. The greater part of this bottle was used on applicants for inoculation subsequently to obtaining the sample for bacteriological analysis, and no bad effects were produced.

*This was the only bottle so infected out of fifteen examined.

No records of rejected bottles were kept by me beyond rough notes, which have since been mislaid. For this reason no definite percentage of contamination can be given. I do not believe that, except in one instance, any prophylactic possessing a bad smell was injected by me. In this instance no bad effects were noted (three cases). The smell was slight but quite perceptible. From a very early date every bottle was handed to me for smelling by the compounder before filling the syringe.

J. S. C. ELKINGTON.

DR. A. M. ELLIOT.

At Malkowal I had two syringes and four needles in use.

I had used one of the syringes the previous evening; I had used both on the 27th. I cannot tell which of the two I had used first at Malkowal. I had used these four needles on the 27th and 29th. I disinfected the four needles every day, and used two out of the other.

At the close of the 27th operation, I gave both the syringes and the four needles to the compounder, who was supposed to clean them out. I did not see him clean them out. When we first started inoculating on the 10th of October I saw him clean them out. I had to teach him the routine. I wished to be observed, and I did the cleaning at first myself.

My procedure was as follows:—

I removed the needle from the syringe, and put it in the carbolic lotion which had been prepared that day; it was different from that used to swab the patients' arms.

This carbolic lotion had only been used during the day to dip the lint in for putting on the seat of inoculation, placing the spare needles in it, and rinsing the syringe.

Then I filled my syringe with carbolic lotion, and put the needle I had just been using on the syringe again, and I squirted the lotion through the needle once.

Both syringes were treated in the same way and the needles.

Then the needle was removed from the nozzle of the syringe, and it was placed in its case. I removed the needle with my hand. I then took the needles from the lotion with my hand, and placed them in the case.

The syringe was also placed in the case. This is how I taught the compounder to do the work.

The cases containing the syringes and needles were replaced in the box.

I distinguished the needles I used by a bit of lint, of which there was a supply in the box.

On the 30th of October I got syringes and needles which on the previous day of use had been presumably treated in that manner by the compounder.

I have a distinct recollection of the 30th. I did my work then in the open under trees on the outskirt; it was surrounded by houses on three sides; it was about 30 feet by 40 feet; the backs of the houses looked over it; there were cattle on the other side.

There were no animals excepting my horse which was being walked about; I had ridden up, the compounder had walked across; the square was hard ground; I don't remember seeing droppings of animals.

My bottles and instruments were placed on a table brought over from my camp; it was carried by coolies; one coolie carried it. By the time I arrived everything was ready; this was done by the compounder.

Everything was lying on the table, the syringes and needles in their cases ready for me to take out; the cases were not open. The oil was in a small metal vessel, and a spirit lamp, and probably one or two bottles of the lotion. The lotion would be poured out into the vessels which had previously been in the box in a special partition.

When I arrived the lamp was lit and the oil was placed over it; then I took a case with a syringe, took out the syringe, filled it with carbolic which had been prepared by the compounder, then I took my case of needles and placed them in the oil; I did not wait until the oil was heated. The syringe with the lotion was in the bowl or leaning against it, and it so remained until I put the needle on. The other needles and syringe were treated in the same way.

I squirted out each syringe twice, once with and once without the needle. After the second rinsing out, the syringes with the needles on them were placed in the bowl.

There were people there, and as soon as they were ready I filled syringe No. 1 with prophylactic.

For that purpose I told the compounder to give me a bottle; I looked at it and gave the brew number and dose to the clerk. I passed it back to the compounder who opened it with forceps which were lying in the same bowl of carbolic; the forceps had before that been placed in the hot oil to remove the needles.

I remember looking at the stopper and paper; both were intact; there was no sign of leakage; before that I had noticed bottles with the stoppers prised out.

When the compounder opened the bottle he handed it to me to smell; I am sure it was the compounder and not a villager; a villager has never assisted me to open the bottle; I would not trust him; I would not trust the compounder without his being under my eye.

I remember smelling this bottle; I perceived nothing; my sense of smell is acute; prior to the 30th October I had discarded a bottle on the ground of bad smell.

(We test Dr. Elliot with certain bottles, including the Malkowal bottle.)

I cannot specialise the smell.

I did not perceive a smell like any of these. Prior to this the compounder had shaken the bottle before opening. He did not drop the cork. He did not shake the bottle with his finger on the mouth; I was watching him.

I never told him to put the mouth of the bottle in a flame, or in hot oil, or carbolic lotion before removing the stopper. I cannot tell whether on this occasion he put the mouth in carbolic.

After smelling I passed the bottle back to him and I took my syringe out of the lotion and filled it with the fluid. Then he re-stoppered the bottle,—whether he had previously swished the stopper through carbolic or not I cannot tell,—then placed the bottle on the table and the forceps in the carbolic.

I then operated on the first man almost immediately and he was followed by 30 or 40 persons without any substantial break. With the first syringeful I must have inoculated about 12 people, I did them with the same needle. I probably dipped my needle into the carbolic after each inoculation. When the syringe was empty I went on continuously; I told him to open the bottle. He did so and I filled my syringe with the same needle on; I did not change my needle between each syringeful.

Between the syringefuls I did not draw any carbolic into the syringe.

I filled the syringe a second time in the same way and followed the same procedure. I cannot account for the compounder giving a different version; at Shadiwal some days before owing to pressure of work the Deputy Commissioner suggested that the compounder should fill a syringe; I allowed him to do so, but it was done so badly that I squirted it out. On no other occasion did the compounder fill the syringe.

The second syringeful exhausted practically all that remained in the bottle.

When I finished it I filled my syringe with carbolic from the basin and put it down leaving it full; it remained full until the second bottle was finished.

That would be about three or four minutes.

At the third bottle I took up syringe No. 1 again; I squirted the lotion on the ground and filled my syringe from bottle No. 3, using the same needle; I am positive I used the same needle. I then used the whole of bottle No. 3 with syringe No. 1; there would be about 16 people so inoculated. Of these 16 none

exhibited tetanus. Some inoculated with bottle 2 exhibited hysterical tetanus; it was fright that caused these symptoms.

I was told there had been no tetanus in the village. I did not wipe the needle with a piece of lint before each inoculation; I swished it in the lotion.

The arm of each patient was washed by the chaprassi with lint dipped in carbolic 1 in 20; he used the same piece of lint, probably the whole day.

A villager may have placed the lint on the arm after inoculation.

I think the tetanus contamination must have been in the prophylactic.

I think the carbolic which was in the syringe for three or four minutes would sufficiently wash out the syringe to account for the freedom from attack of those inoculated with the third bottle. I attribute this to the mechanical action of the rinsing; for this purpose it would be equally efficacious to rinse out with sterile water.

My syringes had been in use since the 10th of October. I used my Malkowal needles on the 27th; none of the persons inoculated on the 27th showed tetanus symptoms.

The needles were in the oil about one minute after it began to smoke. It begins to smoke at about 150° C. It was olive oil; a new lot.

I found loose stoppers at Shadiwal; I discarded the bottles.

I think looking after the syringe and needle is the most important.

I have often seen the compounder swish the mouth of the bottle in carbolic.

I saw all the cases but three; there is no doubt it was tetanus.

I got the Malkowal needles about the 20th; they were not rusty.

It was by the restriction on the cork that I judged they had been prised out.

I have never heard a stopper come out with a pop.

ALEX. M. ELLIOT.

NARINDAR SINGH.

Note.—He adhered to the version given by him and showed us what he actually did. He repeatedly stated that he often filled the syringe.

The needle never fell. I never opened a bottle without Dr. Elliot's orders. I never smelt the bottle; Dr. Elliot always did so.

I never noticed a stopper come out with a pop.

I noticed loose corks. Dr. Elliot used to see them.

The prophylactic in those bottles was used.

The cork at Malkowal was not loose.

I remember it was a very tight cork and the forceps fell out of my hand on to the ground.

I cannot say whether Dr. Elliot saw it.

I swished the forceps in the lotion and then pulled out the cork with it.

I never mentioned this to any one before.

The circumstance was recalled when I was asked whether the cork was tight.

I am certain it happened to the first bottle at Malkowal.

I never gave it a thought before.

I am certain I dropped the forceps; the forceps also fell on to the ground in Gujarat itself; it was at the fourth bottle.

The forceps has fallen down on many other occasions.

I do not remember being asked whether the cork was dropped.

The cork used to fall very often ; and it was put in the antiseptic.

I did not drop it at Malkowal.

Forceps may have fallen at other places besides Malkowal and Gujarat, but I have no recollection. I do not know any one now alive who saw the forceps drop.

The cork had begun to move when the forceps dropped.

No. 258, dated the 4th February 1903.

From—W. M. HAFFKINE, Esq , C. I. E., Director-in-Chief, Plague Research Laboratory, Parel, Bombay,

To—The Secretary, Commission of Enquiry into the Malkowal tetanus cases.

In connection with my evidence to the Commission on the case under consideration, I have the honour to forward attached papers, and to summarise their contents as follows:—

Up to the 17th September we were expecting the assistants asked for, were trying to get them, as will be seen from the correspondence attached, and were endeavouring to do what we could without. On the 29th August I informed Government that unless help was forthcoming immediately, only some 15,000 does instead of 70,000 could be got ready. With the workers at our disposal even that calculation failed, the broth-agar plan could be carried on only to a very small extent, and when there was no possibility of waiting any longer, *viz.*, on the 17th to 19th September, some 10 days before the date when the Punjab expected to get the first despatches, an attempt was made to supplement the amount at our disposal by a temporary substitute, and the "water-agar" prophylactic was adopted. I beg to attach Exhibit no. 6 showing the urgency of the demands from the Punjab. The water-agar prophylactic was as absolutely safe as the others. It promised results differing in the following from the standard material.

It was likely to cause a lesser or no reduction in the case mortality, but at least the same, and most probably a greater, reduction in the number of cases. The Indian Plague Commission held that the results would be the same as from the old prophylactic, and recommended to get the requisite material, *viz.*, the bodies of microbes out of the old standard prophylactic by syphoning away its supernatant fluid.

Although the process was simplified as compared with the broth-agar method, the workers were not sufficient to ensure bacteriological sterility.

We did our best to eliminate the non-sterile brews, by testing one bottle out of three or four instead of the old testing of one out of 60 or 70, and by rejecting every brew in which a suspicion of non-sterility arose and recalling brews inadvertently sent out, of the sterility of which we were not certain.

Still, a number of non-sterile brews went out. I refer to my letter to the Indian Plague Commission printed on page 645 of their Report, Volume III, to show how the matter stands in regard to such brews. The Indian Plague Commission endorsed that view (*vide* paragraph 46, page 16, of the *Bombay Government Gazette*, containing the Commission's Report.)

If the Indian Plague Commission had any hesitation on the point, the present Commission, in their enquiry in Jullundur, obtained facts to support that endorsement. Out of at least one hundred thousand inoculations done in the Punjab, apart from the Malkowal case, not a single mishap attributable to inoculation occurred. I beg to attach documents certifying to the same result and received from the rest of India (Exhibit no. 7).

In the same file (Exhibit no. 7) will be found reports showing that my expectations as to the protective effect of the water-agar and as to the character of that protection, were correct. The Commission was kind enough to inform

me that they had similar information from the Punjab. As there was no possibility for me of getting standard material ready, these reports will, I trust, be considered as justifying my having supplied the Punjab, under very difficult conditions, with a material which reduced the mortality to a fraction of that in non-inoculated. The new prophylactic caused also lesser reaction symptoms and facilitated the work of the inoculations in other respects.

Referring to the Malkowal misfortune, I enumerated in my evidence the facts which go against attributing the tetanus contamination to the Laboratory.

As to what was the real origin of the tetanus there, it is not possible for me to say for certain. Speaking in the abstract, it might be a needle contaminated on the outside, or having a contaminated nozzle, and which escaped effective sterilization and was used for those 19 persons alone; or a contaminated portion of carbolic lotion used for washing the needle in; or a particular pad which was contaminated, and used only on those persons. Contamination might have got into the bottle, either from the needle, or by a gust of wind suddenly raising a heavy dust or by an assistant stoppering the bottle with a contaminated finger for shaking it, etc. The objection I mentioned against a tetanus culture having been drawn into the syringe is maintainable in regard to such a large culture as found by Major Semple. If, on the other hand, contamination was introduced just before the syringe was filled, the amount of it may have been such as to admit of the rinsing of the syringe rendering it innocuous; and so on.

It is impossible, I think, to make more than guesses on all these points. It would be very important, if that be possible, to find out which of the enumerated or other possibilities actually occurred, or to think out, as we are always trying to, which of such possibilities may occur, so as to add to the *technique* of the operators such precautions as may obviate similar occurrences. At the same time the objections to admitting that the tetanus contamination occurred in the Laboratory, as mentioned in my evidence, must stand independent of our ability or otherwise to find out how it actually occurred.

The absence of smell at the time of testing the bottle in Malkowal, and the presence of that smell when examined in Kasauli, points to the contamination having occurred after the bottle was opened in Malkowal. It seems to me that there is no possibility of getting over this fact.

Regarding the possibility of conferring tetanus by minute quantities of tetanus virus, I beg to refer to Vaillard and Rouget's experiments published in the *Annales de l'Institut Pasteur*, 1902, pages 406 and 417; cultures made of tetanus producing earth, reveal the presence of some two or three tetanus microbes in a particle of earth sufficient to cause tetanus to a guinea-pig.

From the same publication (pages 415 and 416), it will be seen that several animals infected with such contaminated earth may exhibit a disease of *equal* severity. The fact, therefore, that in the cases in Malkowal the incubation period did not differ more than it did, does not render necessary the conclusion that the disease was caused in them by absolutely equal doses of virus or toxine.

No. 447, dated the 20th February 1903.

From—W. M. HAFFKINE, Esq., C.I.E., Director-in-Chief, Plague Research Laboratory, Bombay,

To—H. H. RISLEY, Esq, C.I.E., Officiating Secretary to the Government of India, Home Department.

In his evidence to the Malkowal Commission Major Bannerman stated:—

"I expressed surprise to him (Mr. Haffkine) when I found that carbolic was to be omitted." "I do not think the ultimate heating in the issuing bottles is a sufficient substitute."

Captain Liston said :—

"I was surprised when I heard that prophylactic had been sent out without carbolic. I would abandon the final heating rather than the carbolic acid."

Dr. Gibson also said :—

"I have no personal knowledge of a laboratory where carbolic is not used."

In my note on the evidence of the officers, I stated that, of the vaccines prepared for active immunisation, antiseptic is added only in two methods, both of which emanated from me; that in none of the six other active immunisation treatments is antiseptic used; and that in the sera used for passive immunisation, some laboratories add antiseptic, others not. I quoted Calmette who does not antisepticise his antivenene. I beg to forward now letter, dated 7th February 1903, just received from Professor Terni, Messina, whose anti-plague serum is now applied by us in Bombay under the orders of the Government of India, conveyed with their letter no. 1651 of 29th August 1901, to the Secretary to the Government of Bombay, General Department (Plague).

Herewith the translation of section 1 of his letter :—

"I was unable to reply earlier owing to my absence. The serum sent to India does not contain antiseptic substances for the purpose of preservation. After having ascertained that these are completely useless, while they might often cause inconvenience, particularly regarding children, we gave up using them, and apply only intermittent sterilisation."

Intermittent sterilisation (stérilisation fractionnée) consists in heating several times at a low temperature. Serum is generally heated at 55° to 58° C. as at higher temperatures it begins to coagulate.

The water-agar plague prophylactic was heated for an hour at 65° to 70° C.

I send you on this information as I consider it useful as a supplement to what I stated on this matter in paragraph 6 of my note on Captain Greig's letter to the President, Commission of Enquiry, on Malkowal tetanus cases, dated 26th January 1903.

---

7 Février 1903.

Cher Confrère,

A cause d'absence, je n'ai pu vous répondre plus tôt. Le sérum envoyé aux Indes ne contient pas de substances antiseptiques pour bout de conservation. Après avoir verifié qu'elles sont complètement inutiles, tandisque souvent elles peuvent causer des inconvenients surtout dans les enfants, nous avons cessé de nous en servir en pourvoyant seulement avec la stérilisation fractionnée.

S'il est possible, je vous prierais d'établir aussi une preuve de cure avec le seule méthode chirurgique en opérant l'extirpation total des bonbons, pour a la confronter avec le resultat des divers sérums.

J'espérais de vous trouver au Congrès du Caire où j'ai communiqué mes observations sur la cure de la peste en confrontant le serumthérapie et l'intervention chirurgique immédiate et radicale.

Pour toute événience je vous communiqué que je suis appelé à la direction de l'hôpital des maladies infectives à Milan, et à la fin de ce mois je quitte Messine. L'Institut sérumthérapique locale sera mis à celui de Milan.

Agréez, Monsieur le Professeur, l'expression de ma haute considération.

POUR COMILLO GERIN.

CAPTAIN GREIG'S LETTER TO THE PRESIDENT, WITH MR. HAFFKINE'S COMMENT ON SAME.

Dated the 28th January 1903.

From Captain E. D. W. Greig, M.B., B.Sc., I.M.S., to the President, Commission of Enquiry on Malkowal Tetanus Cases.

In reference to your request that I should compare the "Standard Method" of making plague vaccine and the "Water-agar Method" as to the relative amounts of "handling" in each, I have the honour to report as follows :—

Up to the stage of decanting the amount of "handling" is about the same in the two methods. At this stage there is a difference as may be shown by the following example. In the "Standard Method" if you wish to bottle 2,000 c. c. of vaccine it is only necessary to *introduce* a sterile syphon *once*, whilst by the Water-agar Method if the same amount of fluid, *viz.*, 2,000 c c., is wanted, 20 flasks must be employed because each only contains 100 c.c. If pipettes are employed to decant, it is necessary to introduce *and* extract the long pipette 20 times, or 40 operations in all, in order to obtain the same results, and further, the pipettes have to be held by hand near the mouth of the flasks. If syphons were used, 20 connections with flasks would require to be made by the hands of the operators. Of course the dose might be smaller in the "Water Method" but the handling would still be in excess in case of "Water-agar Method" at this stage.

The bottles are now finished with in the case of the "Standard Mehod." In the "Water-agar Method" a metal band has to be applied and the bottles are put in a bag. The bottles are immersed first in water at 65° to 70° and then in cold water and the bands have to be removed. In the removal of the band a certain amount of loosening of the cork is likely to take place in a certain number of cases. Against these in the "Standard Method" the only other handling, which is very short, is the introduction of half per cent. carbolic before bottling, and, as the pipette contains carbolic acid solution, the risks are very small. Further in the "Water-agar Method" one bottle in three has to be tested for sterility, whilst in the "Standard Method" one bottle in 70 *only* has to be opened to be tested for sterility and the fluid is a carbolised one.

Accompaniments :—

5. *British Medical Journal*, 4th January 1897.

W. M. HAFFKINE.

Note on Captain Greig's letter to the President, Commission of Enquiry on Malkowal Tetanus Cases, dated 26th January 1903.

Captain Greig compares the 2,000 c.c. in a broth flask with the 100 c.c. in an agar flask, and mentions the figures 20 and 40 as an index of the difficulties in the last case.

The agar flask contains 100 c.c. of fluid because we want to make the dose 1 c.c. If we desired to have 5 and 7·5 c.c. doses, as in the broth prophylactic case we would put into it 500 c.c. and 750 c.c. of water. Captain Greig would then,

have had to compare the taking out of this amount of fluid from one agar flask with the taking out of 2,000 c.c. from one broth flask. His figures 20 and 40 would then be reduced to 2·7 and 4, and to 5·4 and 8. The conclusion would therefore be that by giving the decanter more water to transfer from the agar flask, we give him less work to do.

No. 2,000 c.c. must be compared with 100 c.c., but the number of doses to be got from a broth-prophylactic flask with that from a water-agar flask, a point which Captain Greig alludes to at the end of the calculations by the remark, "of course the dose might be smaller in the water method."

2. When a 2,000 c.c. brew can be kept growing *for two months full*, the dose will be mostly 5 c.c.; there will be very rarely a brew of 2½ c c. the dose; and in many cases it will be 7·5 c.c., a certain number of brews will be rejected as too weak. On the average some 300 doses are got from such a flask.

There was no possibility of keeping cultures *growing for two months* for the Punjab. When the growth is to be got in a shorter time, within a month only 1 000 c.c. is put in a flask, as the growth is much retarded when overcrowded. The dose in 1,000 c.c. flasks after one month growth, is mostly 7·5 and partly 5 c.c.; and a few brews are of 2 5 c.c. dosages. Thus, in the cold weather of 1901-02, between the 23rd January and 14th March, when we were working under pressure, it will be found in our books:—

12 flasks containing 1,000 c.c. each, grown for a month, marked at 2·5 c.c. the dose;

232 flasks containing 1,000 c.c. each, grown for a month, marked at 5 c.c. the dose;

517 flasks containing 1,000 c.c. each, grown for a month, marked at 7·5. c.c. the dose;

giving an average of 158 doses per flask. When working under pressure we get from two flasks in one month a number of doses equivalent to that from one flask grown for two months. More workers are of course required for the two flasks.

An agar flask, with 100 c.c. of water, gives 75 to 100 doses,

It will appear therefore that, whereas in the water-agar plan a decanter had to get at the material once for every 75—100 doses, in the broth-prophylactic plan, he would have had to do so once for every 158 doses.

[" Pipetting " does not at all multiply the difficulties by 2 (it reduces them) but the matter need perhaps not be considered just now, as no pipetting was done for the material used in the Punjab. The soldiers alone did pipetting, and they only arrived on 17th October 1902.]

3. If therefore manufacture operations are deliberately planned out on a certain date, the following are the data to consider:—

(1) If we can wait for the culture to grow for two months, we put 2,000 c.c. into a flask, and shall get 300 doses out of it.

(2) If the material is to be got ready for sterilization in a month, we must put the 2,000 c.c. into two flasks, shall get 150 doses per flask, and shall have to work harder.

(3) On the other hand, an agar growth will be ready in four days, and the decanters will find in each flask 75 to 100 doses.

In the first instance the flask will be locked up for 60 days; in the second, for 30, and in the third, for 4. An agar flask is therefore easily returned six times in the 30 days, and twelve times in the 60, and we get out of it 500 and 1,000 doses at the same time as we can get 150 and 300 in the other plan.

The latter remarks show which alternative will press itself upon the operator if his time and his number of flasks are limited.

It is true that for handling the broth flask once after one month, and getting 150 doses out of it, fewer workers are required than for handling the agar flask six times during that period, and getting 500 doses from it.

That was why we asked for an increase in the number of workers, and I maintain that in three weeks' time the soldiers can be taught to do that work to an absolute perfection.

4. For putting the corked bottles into the metal collars there is a correct manipulation which we taught the workers, and which not only does not lead to the loosening of the cork, but tightens it firmly without in the least disturbing it. The collar is removed in as safe a way. The manipulation is so simple or so easily teachable, that I do not know how to characterise that objection I cannot conceive of any one in earnest quoting as a bacteriological difficulty the placing, or the teaching of a man to place, a corked bottle into a metal collar, or removing that collar. It seems to me that when deciding whether we were able or not to meet the Punjab demand, I was entitled to consider that we could solve a problem of this kind.

5. Captain Greig compares the testing of one bottle out of every three in the agar plan, with that of one out of 70 in the broth plan, and the difficulty presents itself as 23 times greater in the first case. In itself the testing of one bottle in three is not only not a drawback, but a very great safeguard, being a test, for the given amount of fluid, just 23 times more rigorous than the other. If, however, an idea as to difficulty is to be got from the figures given, it is again essential not to omit to state that in one case we test one bottle for 75 to 100 doses, in the other one for 150 to 300. The amount of work is not 23 times greater, but only two to three times. In the Punjab case it would have been two times, as only 1,000 c.c cultures (equivalent to 35 bottles) were possible. And because the work was to that extent greater, we required more workers if we were to get ready for the Punjab in time.

6. The Malkowal mishap has occurred while the water-agar plan was in operation. The criticisms of that plan are now assertive and unhesitating, and one would think there is and must always have been a universal consensus of opinion that that is a very complicated and hazardous plan, and I was wrong in adopting it. As a matter of fact, up to the Malkowal case, and since the days of our publications on the cholera inoculations in India, there was and is a universal consensus of opinion that the water-agar plan is *the* plan for manufacturing the prophylactic. I refer to absolutely every scientific commission and bacteriologist who published reports and papers on the subject. I believe Major Semple also holds that view. The English and German laboratories, when devising plans for manufacturing typhoid vaccine, only thought of the water-agar plan. Apparently, the plan is feasible, and I might be considered justified in having thought that we were equal to it.

7. The plan of heating after bottling, and that of carbolizing before bottling are universally considered as equivalent and interchangeable plans. I quote in support of this the following :—

(I) My operations in the Pasteur Institute in Paris, 1892, on (*a*) carbolized vaccines, and (*b*) vaccines sterilized by heat alone. *Vide* attached papers by Tamamcheff, "Vaccins phéniqués de Haffkine," *Annales de l'Institut Pasteur*, 1892, p. 713; by Wright and Bruce, "On Vaccination against Asiatic Cholera," p. 9, reprint from *British Medical Journal*, 4th February 1903; and Iawein, "Immunisation par les vaccins anticholériques vivants," *Annales de l'Institut Pasteur*, 1892, p. 709; and

Accompaniment no. 2.

Accompaniment no. 3.

Accompaniment no. 2.

(II) In working out a plan of manufacturing anti-typhoid vaccine, according to the cholera inoculation plan, the bacteriologists of Koch's Institute in Berlin, *viz.*, Professor Pfeiffer and Dr. Kolle

devised sterilization by heat (*vide* attached Experimentelle Untersuchungen zur Frage der Schutzimpfung des Menschen gegen Typhus abdominalis," *Deutsche Medicinische Wochenschrift*, 1896, N. 46). Similarly, Professor Wright and Major Semple, devising the same plan, describe a method containing only heating after decanting. In 1898 the Indian Plague Commission observed 22·5 per cent. of non-sterile bottles in carbolised brews, and considered as a remedy to this heating after bottling which they actually suggested. (*Vide* Bombay Government Resolution no. 1435-P. of 3rd March 1900, paragraph 7, printed in *Bombay Government Gazette Extraordinary* of 13th March 1900.)

Accompaniment no. 4.

Accompaniment no. 5.

It is in the light of these facts that it is necessary to consider the present tendency to ascribe our difficulties to our having heated after bottling, and not carbolized before bottling, and of searching out all imaginable deficiencies in the first plan. I maintain the difficulty lay not where it is indicated; the suggestions are based on a mere *post hoc* reasoning, and the Superintendent's and the Laboratory Officers' remarks are an after-the-event wisdom.

W. M. HAFFKINE.

No. 268, BOMBAY.
PLAGUE RESEARCH LABORATORY.
6th February 1903.

Extracts from the Government of India's Despatch no. 8, Home Department, dated the 18th June 1903.

The next four issues are of a technical character, and we propose to discuss them together. Upon the two former, which relate to the efficacy of the new prophylactic, the finding is on the whole favourable. Paragraph 11 of the Report deals with the *à priori* reasons for expecting that the new prophylactic would be as efficacious as the old. The evidence *à posteriori* taken on the point by the Commission is of a statistical character, and does not lend itself readily to summary. But we accept their conclusion that, so far as it goes, the record indicates that the new fluid was not less efficacious than the old and that the reduced dose did not prove in practice a serious obstacle to the execution of the inoculation scheme.

The grounds for believing and the precautions taken to ensure that the new prophylactic would not be more liable to contamination than the old are stated in paragraph 14 of the Commission's Report. It is of importance to note with reference to the terms of paragraph 14(*e*) of the Report, that the Resolution of the 22nd February 1900, and the Report of the Indian Plague Commission to which Mr. Haffkine alludes in no way justify his procedure. His reference to the Resolution cannot perhaps be taken of itself as an attempt to defend the substitution of heating for the addition of carbolic acid as a safeguard ; but that this is his intention clearly appears from his statement in paragraph 7 of his note dated 6th February 1903, that heating after bottling and carbolising before bottling are universally recognized as equivalent and interchangeable methods of sterilization. The Plague Commission, however (*vide* paragraph 415 of their Report), recommended the re-sterilization by heat of the prophylactic fluid after the final bottling, as a precaution to be adopted in addition to the primary heating and the subsequent admixture of carbolic acid. But Mr. Haffkine omitted the first heating, and the admixture of carbolic acid, and resorted only to a final heating at a temperature of from 65° C. to 70° C. In other words he adopted as his sole precaution what the Plague Commission suggested merely as an additional precaution.

In paragraph 15 of their Report the Commission conclude that, looking at its essential constituents alone, the new prophylactic was not more liable to contamination than the old ; but that the final process of sterilization as carried out was open to objection, and that a further objection to the method of manufacture was the omission of the half per cent. of carbolic acid which had hitherto been employed. This point is a vital one, and we now deal with it in the light of the special evidence bearing upon it which Mr. Haffkine and Lieutenant-Colonel Semple have adduced Mr. Haffkine's letter of 20th February 1903 forwarded a letter dated the 7th February from Professor Terni of Messina, in which it is stated that the serum supplied by him to India does not contain antiseptic substances, the use of these having been abandoned in favour of fractional sterilization. The latter process is explained by Mr. Haffkine as consisting in heating the serum several times at a low temperature, usually to 55° or 58° C. We cannot regard this appeal to the authority of Professor Terni as otherwise than misleading. We understand that fractional sterilization is a method employed for sterilizing substances which would be injured by boiling, and consists in heating the substance several times to a temperature sufficient to kill bacteria but not to affect their spores. At the first heating all bacteria are killed; when the substance cools the spores develop a fresh crop of bacteria which are killed by a second application of heat. Finally, in case a few spores should have survived the second heating, the temperature is raised for a third time to the degree necessary to kill the resulting bacteria. Mr. Haffkine, however, heated his water-agar prophylactic only once—a precaution which would destroy all pathogenic bacteria, but would leave any spores that might be present to develop into fresh bacteria.

We regard the experiments conducted at Kasauli by Lieutenant-Colonel Semple as of the greatest importance in connection with the question which we

are discussing. We hope indeed to place beyond doubt the conclusions which have been drawn from them by causing them to be repeated as soon as arrangements can be made for the purpose. In the meantime we agree with the Commission (paragraph 15) in accepting those experiments as showing that the admixture of carbolic acid, which it had hitherto been usual to employ, prevents the growth in the prophylactic of the bacillus of tetanus. It appears to us that to this circumstance is to be attributed the immunity from serious accident which has attended the innumerable inoculations performed with the standard prophylactic. Assuming that further experiment endorses the results which Lieutenant-Colonel Semple has obtained, we regard them as wholly condemning Mr. Haffkine's action in omitting the carbolic acid, and, what is a matter of even greater importance, as demonstrating the very small degree of risk involved in inoculation if the fluid has been prepared with proper precautions. The views of the Commission are conveyed in their moderate statement that Mr. Haffkine chose an extremely inopportune moment to abandon what he had till then continued to employ as a safeguard.

Paragraphs 16 and 17 of the Report contain the conclusions of the Commission as to the extent to which the prophylactic issued from the Laboratory was actually contaminated (Issue no. 9). We accept what the Commission say with regard to the statement of fact made in our letter of reference. That statement was based upon information received from Captain Wilkinson, the Chief Plague Medical Officer to the Punjab Government, and of the four deaths to which it refers, it will be seen that Captain Harriss reported one, Captain Perry another, and Captain Scott-Moncrieff two more. From the evidence of these three gentlemen it is plain that the Commission were right in hesitating to endorse the statement of facts which Captain Wilkinson had made. Captain Harriss, who speaks of five deaths occurring among 1,912 cases inoculated, infers that they resulted from plague infection prior to inoculation, and not that they ensued in consequence of inoculation, as the report to us suggested. Captain Perry did not himself see the woman at Bagapurana who is reported to have died of tetanus. She was seen by a hospital assistant who is assured that the cause of the death was tetanus, but on the other hand, the same bottle was apparently used without ill-effects to inoculate other people. Captain Scott-Moncrieff's two cases are shown to be, one of a boy who was already ill with malaria, and the other of a pregnant woman who died in labour. The evidence as to the occurrence of abscess in consequence of inoculation is very vague. Mr. Montmorency says that inoculation was made from bad smelling bottles without evil results, and Captain Scott-Moncrieff adds that abscesses had occurred in cases where the bottles did not appear to be contaminated. Captain Harriss was inclined to ascribe the occurrence of two abscesses to the carelessness of his assistant surgeon. In short, we take paragraph 17 of the Commission's Report to be a finding that no deaths other than the 19 which occurred at Malkowal resulted from the use of contaminated fluid—a finding which we accept and regard with the greatest satisfaction. On the other hand, Dr. Surveyor's experiments go to show that the contents of, roughly speaking, three bottles out of four issued from the Laboratory were non-sterile. But if a prophylactic is issued in what is technically described as a contaminated condition, it is impossible either to foretell or to control the nature of the contamination. It may be innocuous; but it may equally well be deadly, and the only possibility of safety lies in complete sterilization. In these circumstances, it is impossible to ascribe this freedom from disaster to the sufficiency of the precautions adopted to ensure the issue of a safe prophylactic.

Extract from the Government of India's Despatch no. 18 (Home Department), dated the 12th November 1903.

In paragraph 25 of our previous despatch we mentioned that we hoped to be able to place beyond doubt the conclusions drawn from Lieutenant-Colonel

Semple's experiments regarding the effect of the omission of a proportion of carbolic acid from the new prophylactic, by causing those experiments to be repeated by an independent investigator. This has now been done. We attach, for your information, a copy of our letter no. 1105, dated 7th July 1903, to the Government of the United Provinces and of that Government's reply, with its enclosures. The result of Mr. Hankin's experiments establishes beyond question Lieutenant-Colonel Semple's conclusions.

No. 1105, dated the 7th July 1903.

From—W. S. MARRIS, Esq., Under Secretary to the Government of India, Home Department,

To—The Secretary to the Government of the United Provinces, Sanitation Department.

The Government of India have under consideration the results of an experiment recently performed by a competent person, which may be stated in the following terms :—

The bacillus of tetanus failed to grow, under anærobic conditions, in ordinary broth and in "glucose broth" to which 0·5 per cent. of carbolic acid had been added. This seems to show that the addition of ½ per cent. of carbolic acid prevents the growth of the bacillus of tetanus, under favourable conditions, in a medium or media in which it ordinarily grows well.

This conclusion is an important one, which the Government of India desire to have tested. They would accordingly be glad if, with the permission of His Honour the Lieutenant-Governor, instructions could be issued to Mr. Hankin, Chemical Examiner to the Government of the United Provinces, to perform such experiments as he may deem necessary to test its accuracy, and to furnish a detailed report at the earliest possible date on the subject for the information of the Government of India.

No. 559, dated the 8th August 1903.

From—S. H. BUTLER, Esq., C.I.E., Secretary to the Government of the United Provinces,

To—The Secretary to the Government of India, Home Department.

In reply to Mr. Marris' confidential letter no. 1105, dated 7th July 1903, I am directed to forward copy of a Report, dated 2nd August, by Mr. Hankin, Chemical Examiner.

No O-Confidential, dated the 2nd August 1903.

From—E. H. HANKIN, Esq., M.A., Chemical Examiner and Bacteriologist, United Provinces and Central Provinces,

To—Colonel JOUBERT, I.M.S., Inspector-General of Civil Hospitals, United Provinces.

I have the honour to acknowledge the receipt of your demi-official letter, dated the 10th July, together with letterno. 1105, dated the 7th July, from the Under Secretary to the Government of India, Home Department (Sanitary—Plague), to the Secretary to the Government of the United Provinces.

2. The question therein propounded is whether or not the tetanus bacillus can grow in bouillon or glucose bouillon to which 0·5 per cent. of carbolic acid has been added.

3. My experiments go to show that it is impossible to cultivate the tetanus bacillus in media containing the above proportion of carbolic acid. The details of my observations are as follows :—

4. *Experiment* (1).—Culture tubes containing media of the following composition were prepared :—

1. Bouillon.
2. Do.
3. Bouillon + ½ per cent. carbolic acid.
4. Do. do.
5. Bouillon + 1 per cent. glucose.
6. Do. do.
7. Bouillon + 1 per cent. glucose and ½ per cent. carbolic acid.
8. Do. do. do. do.
9. Bouillon + 1 per cent. sodium formate.
10. Do. do.
11. Bouillon + 1 per cent. sodium formate and ½ per cent. carbolic.
12. Do. do. do. do.

Both in this and in the succeeding experiments, the bouillon employed had been freshly prepared, in order to avoid the known detrimental effect of stale culture media on the tetanus microbe.

Each of the above twelve test tubes was inoculated with tetanus, and freed from oxygen by passage of a brisk stream of hydrogen bubbles for a quarter of an hour in each case. The hydrogen was prepared in a Kipp's apparatus. To free it from impurities that might possibly be harmful to the tetanus microbe it was washed by being passed successively through solutions of silver nitrate, lead nitrate, and pyrogallate of soda.

A typical tetanus growth occurred in each of the above six tubes that did not contain carbolic (except in one of the formate tubes which produced no apparent growth). In each case typical drumstick forms were seen on microscopical examination of the culture. In each case when inoculated into glucose agaragar, under anærobic conditions, a typical tetanus growth resulted. In each case when inoculated on agaragar ærobically no growth occurred, proving that no ærobic microbe was present as an impurity. One of each pair of tubes was inoculated into bouillon anærobically, and in each case a typical tetanus growth resulted. That the culture was virulent was found by the result of inoculation of a small quantity of a sub-culture from one of these cultures into a rat.

In none of the cases in which carbolic acid was present did any apparent growth result. A capillary pipette was introduced into each of these tubes under precautions to avoid shaking, and specimens of the liquid were taken from near the bottom, and subjected to microscopical examination. In no case could any sign of growth be observed. A specimen from one of the tubes inoculated into bouillon anærobically produced no growth. These observations were carried out four days after the original inoculations of the carbolic bouillon.

Experiment 2.—This was a repetition of experiment (1), but only one tube of each variety of bouillon was inoculated. The same results were obtained as in the former experiment.

Experiment 3.—This was a similar experiment. In both of these experiments only a scanty growth occurred in the tubes containing sodium formate.

Experiment 4.—In this experiment a fresh brew of bouillon was employed. The sodium formate bouillon was only ½ per cent. in strength, and now produced typical growths. Two tubes of each variety were inoculated. In each case in the absence of carbolic acid, a typical tetanus growth resulted, with typical

drumstick spore forms. In each case in the presence of ½ per cent. carbolic acid, no visible growth resulted.

Experiment 5.—Fresh bouillon was prepared to which 2 per cent. glucose was added. Carbolic acid was added to a portion of this bouillon in the proportion of 1 part in 600, that is to say, ⅙ per cent. Six tubes were inoculated of the glucose bouillon, of which three were without and three with carbolic acid. In the former case a typical tetanus growth resulted. In the latter case no visible growth could be observed three days from the commencement of the experiment. Although this single experiment is not of itself sufficient to prove that tetanus cannot grow in the presence of ⅙ per cent. carbolic acid, its result may fairly be regarded as substantiating the statement that tetanus is unable to grow in the presence of ½ per cent. of carbolic acid.

Dated the 24th November 1904.

From—DR. CHARLES J. MARTIN, M.B., D.SC., F.R.S., Director, Lister Institute,

To—The Under Secretary of State for India.

In accordance with the request contained in your favour of 17th October, to be informed of the Institute's conclusions so far as they may have been arrived at on the subject of Haffkine's prophylactic and the Report of Sir Lawrence Jenkins's Commission submitted to the Institute for experiment and report in your letter of 2nd February 1904, I am instructed by the Governing Body to say that while the whole investigation it was suggested the Institute should undertake in reference to this matter is not yet completed, owing to the unfortunate illness of Captain Stuart Douglas, I.M.S., the officer placed at the disposal of the Institute to assist in this investigation, they are in a position to present the accompanying interim report upon—

1. The efficiency of each process.
2. The question of contamination.
3. The probable origin of the tetanus virus in the Malkowal accident.

The investigation involved in the further reference to the Institute, *i.e.*, to submit the methods of preparing Haffkine's fluid to exhaustive tests under reliable conditions with a view to prescribing sufficient and suitable precautions against contamination, and to obtaining a standardised preparation which will give known and uniform results, is well in hand and will form the subject of a further report.

THE LISTER INSTITUTE OF PREVENTIVE MEDICINE.

Interim Report.

The questions which were submitted to the Institute for further examination and experiment in the letter from the Permanent Under Secretary for India, 2nd February 1904, were—

The conclusions of Sir Lawrence Jenkin's Commission relating to the processes adopted by Mr. Haffkine in manufacturing his prophylactic with regard to—

1. The efficiency of each process.

2. The ease with which freedom from contamination may be attained in each process.

3. The probable origin of the tetanus virus in the Malkowal cases.

The Institute was further requested to —

Submit the methods of preparing Haffkine's fluid to exhaustive, tests under reliable conditions with a view to prescribing sufficient and suitable precautions against contamination and to obtaining a standardised preparation which will give known and uniform results.

As material for its consideration, apart from its own experiments the Institute was supplied with Extracts from the Report and Evidence of the Punjab Plague Inoculation Commission which dealt with scientific matters.

The present report deals with items (1), (2) and (3) only, as the investigation is as yet incomplete. The details of the experiments made by the Institute appear as appendices attached to the report.

1. The efficiency of each process in the production of immunity.

The relative efficacy of the two processes is bound up with the question of the value of the supernatant fluid which is in the case of the "Standard" process (a broth culture of six to eight weeks' growth) injected along with the bodies of the bacteria. Such supernatant fluid will contain the more or less toxic products of the autolysis of the bacilli and possibly a toxin secreted by the bacillus. This Institute concurs in the opinion of the Commission that the essential constituent for immunisation is contained in the bodies of the bacilli. There is no evidence that in the case of plague that the fluid, after the bacilli are filtered off, is possessed of any immunising value whatever or indeed that it may not be actually disadvantageous.

The facts governing the answer to the question submitted are derivable from two sources:

1. Comparative experiments on animals.

2. Inoculation returns of the two methods.

The relative value of a vaccine prepared by a water-agar process and by Haffkine's standard broth method was the subject of an experimental investigation on animals by Kolle and Otto (1), Tavel Krunbein and Glucksmann (2), and the German Plague Commission (3). The results obtained showed that the protection obtained was about the same by either method.

Further experiments on animals to determine whether the supernatant fluid from broth cultures was possessed of any immunising properties were undertaken by Pfeiffer (4), Kolle (5), the German Plague Commission (3) and the Indian Plague Commission (6). The results in all cases led to the conclusion that this fluid played no part in the production of immunity. Similar experiments are at present in progress in this Institute, but are not yet sufficiently advanced for the formation of a judgment. Concerning the value of the inoculation returns quoted in the Commission's Report we have no means of judging, and it is not clear that the proportion of bacterial bodies in the doses by the two methods was the same, but the Institute sees no reason to differ from the conclusions of the Commission that the "New Prophylactic" is not less efficacious than the old.

2. The relative ease with which freedom from contamination may be attained by the employment of the "Standard" method and the water-agar method respectively.

Provided the two processes are carried out by an agency, in the technical skill of which complete reliance can be placed, there is no doubt that the preparation and bottling of plague vaccine may be accomplished by either method, so that the completed preparation shall be sterile.

In the hands, however, of more or less unskilled workers, and when a great bulk of material has to be dealt with, the "Standard" method, even apart from the introduction of ·5 per cent. carbolic acid, is in our opinion safer.

The advantages from this point of view of the "Standard" process over the water-agar method are—

1. The absence of the manipulation necessary for emulsifying the growth on agar.

2. The ease of syphoning a broth culture.

3. The opening of the flasks, after they have been sown, may be limited to two occasions—

(*a*) Before heating to withdraw a sample to ascertain the purity of the growth.

(*b*) After heating, to introduce carbolic acid and insert the syphon.

Regarding the value of ·5 per cent. carbolic acid as a second line of defence, we have made a series of experiments (Appendices A, B and C), the results of which demonstrate in an emphatic manner that of the organisms experimented with, the non-sporing ones are destroyed in a few days, and that in the case of those which possess spores, including tetanus, their growth is inhibited so that, if they should by accident find access to the vaccine, they do not multiply.

This restraining effect of ½ per cent. carbolic acid may, however, prove inadequate in the case of *gross* contamination by some organisms (Experiment 3, Appendix B). The experiments in Appendix F (*b*), Experiment 6, show that a considerable quantity of living tetanus spores together with Haffkine's fluid may be injected into an animal without producing the disease, provided that these spores are freed from toxin.

The Institute agrees entirely with the Commission in its finding that carbolic acid is a valuable agent in restraining tetanus growth when added to plague prophylactic, and its experiments further emphasize the importance of the addition of ·5 per cent. carbolic acid in preventing the growth and toxin formation in a vaccine which might be liable to the possibility of contamination with the spores of tetanus.

The method employed by Mr. Haffkine as a substitute for the addition of ·5 per cent. carbolic, *viz.*, one final heating to 65° to 70° Centigrade is, however, relied upon in some laboratories, *e.g.*, the Pasteur Institute of Paris, where the technique is unexceptionable.

Such a single heating to 70° Centigrade, as pointed out in the Government of India's despatch no. 8, Home Department, 18th June 1903 (pages 2589—2590 of Extracts) would only ensure freedom from non-sporing organisms and considering that the technique in the Laboratory at Parel under the conditions existing at the time of the accident at Malkowal was obviously defective, the fact that Mr. Haffkine found himself obliged to abandon a method in which the addition of ·5 per cent. carbolic was employed and therefore capable of minimieing the danger arising from an imperfect agency was extremely unfortunate.

3. Probable origin of the tetanus virus.

From consideration of the evidence and in the light of experiments (*vide* Appendix F) the Institute agrees with the Commission that in all probability the tetanus was at the time of the inoculation in the fluid contained in the bottle, but the fact that a bottle presumably tightly corked (*vide* Dr. Elliot's evidence) should contain enough tetanus growth to destroy nineteen people and yet not be accompanied by sufficient smell to arouse the suspicion of Dr. Elliot who, according to his evidence, remembers smelling this particular bottle is difficult to comprehend.

The Commission expresses itself (Extracts page 2546) as confirmed in the view that the tetanus contamination was in the fluid contained in the bottle 53-N, by the results of Colonel Semple's experiments to show that, although there were tetanus organisms in the ·5 c.c. remaining in the bottle when examined by him, the conditions obtaining were not such as to permit of growth.

We have made experiments to determine whether tetanus might not grow in a nearly empty bottle of water-agar emulsion *if associated with the growth of some ordinary saprophytic organisms.*

As may be seen from the results of the experiments (Appendix E, Experiments 1 to 8), although these conditions did not permit of the growth of a pure culture of tetanus, in those cases where it was sown in association with ærobic saprophytic organisms, growth occurred. We think, therefore, that Colonel Semple's experiments cannot be held to exclude the possibility of contamination at the time of the opening of the bottle.

Apart from the circumstances mentioned above we do not think that any other evidence discussed in the Commission's Report and including Mr. Haffkine's experiments, seriously militate against this view of the Commission. The precise concurrence of the incidence of the attack with the use of the one particular bottle of vaccine appears to us, as it did to the Commission, to suggest in the strongest way that the tetanus was derived from the bottle, and the argument that the specific contamination never entered the syringe, founded on the fact that those subsequently inoculated escaped from tetanus is, we consider, unsound. Whether inoculation of a fluid containing tetanus organisms into the body of an animal is or is not followed by the disease depends, as was shown by Semple, upon the number of organisms introduced under the particular circumstances.

Our own experiments (Appendix F(*a*), Experiments 1 and 2) show that $\frac{1}{100,00}$ of the quantity of a tetanus culture grown under imperfect ærobic conditions which is required to kill a guinea-pig could be detected by cultural methods.

An ordinary 20 c. c. syringe leaves about $\frac{1}{3}$ c. c. of content unexpelled at the end of the stroke of the piston.

Assuming $\frac{1}{3}$ c.c. to have been the dead space in the syringe used by Dr. Elliot and that the growth was a fairly uniform one, as must be supposed from the similarity and fatal issue of the disease in the nineteen cases, the individuals inoculated from a fresh bottle after the rinsing of the syringe with carbolic solution would only have received $\frac{1}{3,600}$th of the dose of tetanus virus injected into the persons who were inoculated from the contaminated bottle.

With regard to Mr. Haffkine's experiments (Appendix C of Extracts), we would remark that because a high dilution of a culture of a saprophytic organism still gives growth when sown upon an artificial nutrient medium, it does not follow that a similar dilution of tetanus will give rise to the disease when inoculated into a man possessing a considerable capacity of resistance to invasion.

Although of opinion that the evidence points strongly to the infection being in the bottle at the time of the inoculation, we agree with the Commission that it is quite impossible to determine at what stage in its history and in what way bottle 53-N became contaminated.

The main conclusions arrived at may be summarised as follows :—

(1) The Institute sees no reason to differ from the conclusions of the Commission that the new prophylactic is not less efficacious than the old.

(2) The Institute is of opinion that in the hands of more or less unskilled workers it is easier to ensure freedom from contamination by Mr. Haffkine's "Standard Method" of manufacturing plague vaccine than with the water-agar process as employed by him.

(3) The Institute is in entire agreement with the Commission as to the value of ·5 per cent. carbolic acid in restraining tetanus growth when added to plague prophylactic, and its experiments emphasize

still further the importance of this addition in preventing the growth and toxin formation in a vaccine which might be liable to the possibility of contamination with the spores of tetanus.

(4) The conclusions of the Institute coincide with those of the Commission that in all probability the tetanus was at the time of the inoculation in the fluid contained in the bottle, but that it is impossible to determine at what stage in its history or in what way bottle 53-N became contaminated.

CHARLES J. MARTIN,

Director.

APPENDIX.

A. Experiments showing the influence of carbolic acid on the growth of non-sporing organisms.

B. Experiments showing the influence of carbolic acid on the growth of sporing organisms.

C. Experiments showing the influence of carbolic acid on the growth of tetanus :—

(*a*) With favourable media.

(*b*) With Haffkine's prophylactic fluid.

D. Experiments to show that water-agar is a suitable medium for the growth of the tetanus bacillus.

E. Experiments on the growth of tetanus in bottles containing small quantities of water-agar emulsion.

F. Experiments :—

(*a*) To show the relation between the quantity of tetanus organisms necessary to kill to the amount capable of giving a growth on artificial media.

(*b*) To show the pathogenic characteristics of the bacillus used.

G. Experiments with a syringe contaminated with tetanus.

A.—EXPERIMENTS

Showing the influence of carbolic acid on the growth of non-sporing organisms.

A.—EXPERIMENT 1.

Cholera vibrio, 24 hours' agar-culture was planted out into:—

Tube I $\frac{1}{3}$% carbolic acid broth,
II $\frac{1}{2}$% carbolic acid broth,
III $\frac{1}{5}$% carbolic acid broth,
IV ordinary peptone broth,
and these tubes were incubated at 37° C.

11 days after:—

Tube IV shows abundant microscopically pure growth,
I shows no growth,
II shows no growth,
III shows no growth.

10 c.mm. of I, II and III were planted into 3 tubes of ordinary broth.

2 days after:—

These tubes show no growth.

A.—EXPERIMENT 2.

Plague bacillus planted from 24 hours' agar-culture into:—

Tube I $\frac{1}{3}$% carbolic acid broth,
II $\frac{1}{2}$% carbolic acid broth,
III $\frac{1}{5}$% carbolic acid broth,
IV ordinary broth.

Incubated at 37° C.

11 days after:—

Tube IV shows abundant microscopically pure growth,
I, II and III—no visible growth.

10 c.mm. of I, II and III planted out into 3 tubes of ordinary broth after well shaking the tubes.

2 days after:—

No growth in any of the sub-cultures.

A.—EXPERIMENT 3.

Pyocyaneus planted out from 24 hours' agar-culture into:—

Tube I $\frac{1}{3}$% carbolic acid broth,
II $\frac{1}{2}$% carbolic acid broth,
III $\frac{1}{5}$% carbolic acid broth,
IV ordinary broth.

11 days after:—

Tube IV shows abundant microscopically pure growth, with well-marked colour production,
Tubes I, II and III apparently slight growth.

10 c.mm. from each of I, II and III planted into 3 tubes of ordinary broth.

2 days after:—

No growth in any of the sub-cultures.

A.—Experiment 4.

Pyocyaneus from a 20 hours' old broth culture 10 c.mm. were in each case planted in the following :—

Tube I ½% carbolic acid broth,
II ½% carbolic acid broth,
III ½% carbolic acid broth,
IV ordinary broth (as control).
Incubated at 37°C.

1 day after :—

Tube IV shows abundant growth of pure pyocyaneus.
Tubes I, II and III show no growth.

25 c.mm. from each of I, II and III planted out in 3 tubes of sterile broth and incubated at 37°C.

1 day after :—

No growth visible in tubes planted or in ½% carbolic acid broth. Tubes labelled I, II and III.

3 days after :—

No growth in tubes I, II or III, or in the sub-cultures made from them.

A.—Experiment 5.

Plague from a broth culture 20 hours old. 10 c.mm. were in each case planted into the following tubes :—

Tube I ½% carbolic acid broth,
II ½% carbolic acid broth,
III ½% carbolic acid broth,
IV ordinary broth as control.

1 day after :—

Tube IV shows slight growth.
Tubes I, II and III no growth.

1 day after :—

Growth in Tube IV thicker; microscopically pure growth of plague.
From Tubes I, II and III 25 c.mm. in each case planted in broth tubes.
No growth visible in I, II and III.

3 days after :—

No growth in Tube I, II or III or in any of the sub-cultures made from them.

A.—Experiment 6.

Staphylococcus Aureus from a 7 days' old broth culture; 10 c.mm. were in each case planted out into the following tubes :—

Tube I ½% carbolic acid broth,
II ½% carbolic acid broth,

Tube III ½% carbolic acid broth,
IV ½% carbolic acid hroth,
V ordinary broth as control.

1 day after:—

Tube V shows an abundant growth (microscopically pure) of staphylococcus.

Tubes I, II, III and IV show no signs of growth; 25 c.mm. of each planted out into a broth tube.

2 days after:—

No growth in Tubes I, II, III and IV or in any of the sub-cultures made from them.

B.—EXPERIMENTS

Showing the influence of carbolic acid on the growth of sporing organisms.

B.—Experiment 1.

Anthrax from agar-culture 24 hours old : the following tubes were planted with a large quantity :—

Tube I ½ % carbolic acid broth,
II ½ % carbolic acid broth,
III ½ % carbolic acid broth,
IV ordinary broth.

11 days after :—

Tube IV shows abundant microscopically pure growth,
I—no visible growth,
II—no visible growth,
III—no visible growth.

From I, II and III, after shaking thoroughly, 3 ordinary broths were planted with 10 c.mm. in each case.

2 days after :—

Very slight growth in all these sub-cultures.

B.—Experiment 2.

B. Subtilis, planted from 24 hours' agar-culture into :—

Tube I ½ % carbolic acid broth,
II ½ % carbolic acid broth,
III ½ % carbolic acid broth,
IV ordinary broth.

11 days after :—

Tube IV shows abundant microscopically pure growth.
Tubes I, II and III shows slight pellets of growth.
After well shaking 10 c.mm. from I, II and III planted out into 3 ordinary broth tubes.

2 days after :—

Growth in all sub-cultures.

B.—Experiment 3.

A flask of 22 cc. capacity containing Haffkine's prophylactic fluid with 0·5 per cent. carbolic added and 3 months old was inoculated with a 2 mgrm. loopful of B. Megatherium. In 3 days a growth had occurred.

Microscopically: large bacillus agreeing morphologically with the B. Megatherium.

This experiment shows that where very gross contamination of Haffkine's prophylactic fluid by certain organisms occurs the addition of 0·5 per cent. carbolic will not completely stop their growth.

Results of experiments on pure cultures of various non-sporing and sporing organisms.

These experiments show that 0·5 per cent. carbolic acid has an inhibitory action on the growth of all the organisms, but that in the case of the sporing organisms the spores are not destroyed and are capable of growth when transferred to a suitable medium.

C.—EXPERIMENTS

Showing the influence of carbolic acid on the growth of tetanus—

(*a*) With favourable Media.

C.—EXPERIMENT 1.

Tetanus planted from an old broth culture in tubes of freshly prepared broth (ordinary peptone), and grown under anærobic conditions.

Tube I ½ % carbolic acid.
II ½ % carbolic acid.
III ½ % carbolic acid.
IV Ordinary broth.
V Ordinary broth.
VI Ordinary broth.

5 days after :—
Tubes IV, V and VI all give growth.
Tube I shows no signs of growth.
Tubes II and III broken.
Tube IV examined microscopically shows a pure culture of tetanus.

2 days after :—
Tube I shows no growth either visible to naked eye or under the microscope.
Tube V examined microscopically shows a pure culture of tetanus, a large proportion of which shows spores.

C.—EXPERIMENT 2.

Tetanus; the following tubes were each planted with a platinum loopful of an eight days' old glucose broth culture of B. Tetani and were placed under anærobic conditions in a hydrogen atmosphere :—

Tube I—	Bouillon with 0·1 %	Sulphindigotate of Soda;	½ %	carbolic acid.
II—	"	"	"	"
III—	"	"	"	"
IV—	"	"	(control).	

In 2 days growth visible in tube IV (control). Examined microscopically after 5 days typical tetanus bacilli.

Tubes I, II and III no growth.

Sub-cultures with 25 c. mm. being planted on the same medium from I, II and III remained sterile.

Sub-culture from Tube IV; good growth on 3rd day.

The whole of Tube I, after 5 days under anærobic conditions, was pipetted into 150 c. c. of Sulphindigotate broth and incubated anærobically. Growth took place; microscopically tetanus bacilli.

This experiment shows that while growth of the B. Tetani is completely inhibited by 0·5 per cent. carbolic acid, the spores are not destroyed for on the addition of a tube to sufficient volume of a suitable medium growth takes place under appropriate conditions.

C.—EXPERIMENT 3.

Tetanus. The following tubes were each planted with a platinum loopful of an eight days' old glucose broth culture of B. Tetani and were placed under anærobic conditions in a hydrogen atmosphere :—

Tube I	Bouillon with 0·1 %	Sulphindigotate of Soda;	0·2	carbolic acid.
II	"	"	"	"
III	"	"	"	"
IV	"	"	" do. (control).	

In 2 days growth visible in Tube IV (control); examined microscopically after 5 days typical tetanus bacilli.

Tubes I, II and III no growth.

Sub-cultures with 25 c. mm. being planted on the same medium from I, II and III remained sterile.

Sub-culture from Tube IV; good growth on the 3rd day.

C.—EXPERIMENT 4.

Tetanus. The following tubes were each planted with a platinum loopful of an eight days' old glucose broth culture of B. Tetani and were placed under anærobic conditions in a hydrogen atmosphere :—

Tube I Bouillon with 2 % glucose; ½ % carbolic acid.
II " " " "
III " " " "
IV " " (control).

In 2 days growth visible in Tube IV (control); examined microscopically after 5 days typical tetanus bacilli.

Tubes I, II and III no growth.

Sub-cultures with 25 c. mm. being planted on the same medium from I, II and III remained sterile.

Sub-culture from Tube IV; good growth on the 3rd day.

The whole of Tube I was pipetted into 150 c.c. of Sulphindigotate broth and incubated anærobically; no growth took place in this case.

C.—EXPERIMENT 5.

Tetanus. The following tubes were each planted with a platinum loopful of an eight days' old glucose broth culture of B. Tetani and were placed under anærobic conditions in a hydrogen atmosphere :—

Tube I Bouillon with 2 % glucose; 0·2 % carbolic acid.
II " " " "
III " " " "
IV " " (control).

In 2 days growth visible in Tube IV (control); examined microscopically after 5 days typical tetanus bacilli.

Tubes I, II and III no growth.

Sub-cultures with 25 c. mm. being planted in the same medium from I, II and III remained sterile.

Sub-culture from Tube IV; good growth on the 3rd day.

C.—EXPERIMENTS

Showing the influence of carbolic acid on the growth of tetanus—

(*b*) With Haffkine's Prophylactic Fluid.

C. (*b*) ***Experiment 1.***—Bottles of a capacity of 22 c.c. containing Haffkine's Fluid were inoculated with 50 c. mm. of a three days' old broth culture of B. Tetani, and were placed at a temperature of 37° C. under varying conditions. Certain tubes in the Series contained 0·5 per cent. carbolic acid. The result is shown in the table.

No. of bottle.	Carbolised = +. Not carbolised = o. 0·5 per cent. carbolic.	Conditions under which kept.	Growth = +. No growth = o.	Number of sub-cultures.	Growth = +. No growth = o. Of sub-cultures.

This series of experiments shows that in a number of bottles containing Haffkine's Fluid prepared in series, some with 0·5 per cent. carbolic, others with no carbolic, and which were all inoculated with the B. Tetani Tetanus growth occurred in all the non-carbolised, but did not occur in the carbolised bottles. This was true whether the bottles were put under the best anærobic conditions or whether they were sealed full or three-quarters full.

The result of inoculation of material from certain of the bottles into mice is shown on the following Table.

C. (*b*) *Experiment 2.*—The following mice each received 0·5 c.c. from various of the before-mentioned bottles :—

No. of bottle.	Mouse No.	
1	1	Alive 14 days later.
2	2	" "
3	3	" "
4	4	" "
15	5	" "
18	6	" "
12	7	Found dead ; no trace of Tetanus observed.
11	8	" " " "
21	9	Characteristic Tetanus.

D.—EXPERIMENTS

To show that Water-Agar is a suitable medium for the growth of the Tetanus Bacillus.

D. Experiment 1.—Two bottles of 30 c.c. capacity were filled with Water-Agar Prophylactic Fluid. One was inoculated from a pure culture on Glucose Broth of B. Tetani, the other with a mixed growth of B. Tetani and B. Subtilis. They were stoppered with rubber corks and placed at 37° C. In three days both bottles had a growth. Both bottles had about equally the characteristic odour of Tetanus. Microscopical examination revealed Tetanus bacilli.

D. Experiment 2.—A bottle was half filled with Water-Agar Prophylactic Fluid and inoculated with B. Tetanus and B. Subtilis.

In three days a growth with characteristic odour. Microscopically Tetanus bacilli.

These experiments show that the Tetanus bacillus grows on Water-Agar Fluid either alone or in the presence of an ærobic organism such as the B. Subtilis, and that a full bottle is not necessary to obtain the growth.

E.—EXPERIMENTS

On the Growth of Tetanus in bottles containing small quantities of Water-Agar Emulsion.

E. Experiments 1 to 8.—To ascertain whether the Tetanus Bacillus is capable of growing in a small quantity of Water-Agar Prophylactic Emulsion in corked bottles of 30 c. c. capacity. The Series consisted of 8 bottles of 30 c.c. capacity. Each had 1 c. c. of Water-Agar Emulsion measured into it. A 4 days' old Glucose Broth culture of B. Tetani was employed as the inoculating material.

Experiment 1.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of undiluted culture. A sub-culture was then made with the same loop on Sulphindigotate broth. A microscopical examination was made immediately after the inoculation. Several microscopical fields showed no bacilli. The sub-culture made before corking showed no growth after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37°C.

After 4 days in the incubator the bottle was opened. It had no Tetanus smell. Microscopical examination showed no Tetanus bacilli. Sub-cultures did not grow.

E. Experiment 2.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of culture diluted to 1 in 10 in neutral broth. A sub-culture was then made with the same loop on Sulphindigotate broth. The sub-culture made before corking showed no growth after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37°C.

After 4 days in the incubator the bottle was opened. It had no Tetanus smell. Microscopical examination showed no Tetanus bacilli. Sub-cultures did not grow.

E. Experiment 3.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of culture diluted to 1 in 100 in neutral broth. A sub-culture was then made with the same loop on Sulphindigotate broth. The sub-culture made before corking showed no growth after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37°C.

After 4 days in the incubator the bottle was opened. It had no Tetanus smell. Microscopical examination showed no Tetanus bacilli. Sub-cultures did not grow.

E. Experiment 4.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of culture diluted to 1 in 1,000 in neutral broth. A sub-culture was then made with the same loop on Sulphindigotate broth. The sub-culture made before corking showed no growth after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37° C.

After 4 days in the incubator the bottle was opened. It had no Tetanus smell. Microscopical examination showed no Tetanus bacilli. Sub-cultures did not grow.

E. Experiment 5.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of undiluted culture. It was then inoculated with the Hay bacillus and a Staphylococcus Aureus. A sub-culture was then made with the same loop on Sulphindigotate broth. A microscopical examination was made immediately after the inoculation. Several microscopical fields showed no Tetanus bacilli. The sub-culture made before corking showed no growth of Tetanus bacilli after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37° C.

After 4 days in the incubator the bottle was opened. It had a marked Tetanus smell. Microscopical examination showed numerous typical Tetanus bacilli. The sub-culture gave a growth of the Tetanus bacillus.

E. Experiment 6.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of culture diluted to 1 in 10 in neutral broth. It was then inoculated with the Hay bacillus and a Staphylococcus Aureus. A sub-culture was then made with the same loop on Sulphindigotate broth. The sub-culture made before corking showed no growth of the Tetanus bacillus after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37° C.

After 4 days in the incubator the bottle was opened. It had a marked Tetanus smell. Microscopical examination showed numerous typical Tetanus bacilli. The sub-culture gave a growth of the Tetanus bacillus.

E. Experiment 7.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of culture diluted to 1 in 100 in neutral broth. It was then inoculated with the Hay bacillus and a Staphylococcus Aureus. A sub-culture was then made with the same loop on Sulphindigotate broth. The sub-culture made before corking showed no growth of the Tetanus bacillus after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37° C.

After 4 days in the incubator the bottle was opened. It had a marked Tetanus smell. Microscopical examination showed numerous typical Tetanus bacilli. The sub-culture gave a growth of the Tetanus bacillus.

E. Experiment 8.—A bottle containing 1 c. c. of Water-Agar Emulsion was inoculated with a 2 mgrm. loopful of culture diluted to 1 in 1,000 in neutral broth. It was then inoculated with the Hay bacillus and a Staphylococcus Aureus. A sub-culture was then made with the same loop on Sulphindigotate broth. The sub-culture made before corking showed no growth after 4 days in the incubator under anærobic conditions.

The bottle was corked with a rubber cork and incubated at 37° C.

After 4 days in the incubator the bottle was opened. It had a marked Tetanus smell. Microscopical examination showed numerous typical Tetanus bacilli. The sub-culture gave a growth of the Tetanus bacillus.

This Series of experiments, nos. 1 to 8, shows that growth of the Tetanus bacillus can take place in a corked bottle containing a very small quantity of a water-agar prophylactic emulsion if other ærobic organisms such as B. Subtilis and Staphylococcus Aureus are associated with it.

F.—(a) EXPERIMENTS

To show the relation between the quantity of Tetanus Organism necessary to kill to the amount capable of giving a growth on Artificial Media.

F. (*a*) *Experiment 1.*—Dilutions were made of a culture grown under imperfect anaerobic conditions (for 7 days in Sulphindigotate of Soda broth) such as would exist in a bottle of vaccine. This accounts for the low toxicity of the culture for the same bacillus was that employed in Experiments F, (*b*) 2 and 7 where an average toxin formation occurred.

The dilutions made were :—

1 in 10	growth.
1 in 100	„
1 in 1,000	„
1 in 10,000	„
1 in 100,000	„
1 in 1,000,000	„
1 in 10,000,000	no growth.

Cultivation made with these dilutions showed growth of the Tetanus bacillus up to 1 in 1 million.

F. (*a*) *Experiment 2.*—The same quantities as used in the previous experiment for cultures, and from the same dilutions, were mixed with 1 c. c. of Haffkine's Fluid and injected into guinea pigs of about 400 grams weight.

Guinea Pig No. 1	1/10 c. c. + 1 c. c. Haffkine's Prophylactic,	death 6th day Tetanus.
2	1/100 Slight local Tetanus.	
3	1/1,000 „	
4	1/10,000 No Tetanus.	
5	1/100,000 „	
6	1/1,000,000 „	
7	1/10,000,000 „	

Experiments 1 and 2 F. show that 1/100,000 of the quantity required to kill a guinea pig could be detected by cultivial methods,

—

F.—(b) EXPERIMENTS

To show the Pathogenic Characteristics of the Bacillus used.

F. (*b*) *Experiment 1.*—To show the Toxicity of a Filtrate from the Culture employed in these experiments on mice. In this case the bouillon medium was deprived of free oxygen by the passage of hydrogen through it, *i.e.*, the anærobic conditions were good.

Mouse No. 1.	1/1,000 c.c.	dead of Tetanus on the	3rd day.
2.	1/2,000	" " "	5th day.
3.	1/4,000	" " "	7th day.
4.	1/8,000	lived; no Tetanus.	

F. (*b*) *Experiment 2.*—To show the Toxicity of a Filtrate from the Culture used in the experiments on guinea pigs under similar conditions to previous experiment.

Guinea Pig No. 1.	1/100 c.c.	dead on the	4th day	of Tetanus.
2.	1/200	" "	4th day	"
3.	1/300	" "	5th day	"
4.	1/400	" "	6th day	"
5.	1/500	" "	7th day	"
6.	1/600	recovered.		

F. (*b*) *Experiment 3.*—To show that Tetanus Spores alone will not produce Tetanus.

A month old broth culture was heated to 80° C. for 1 hour to destroy all or nearly all, the toxin.

A guinea pig received subcutaneously 1 c. c. of this. No Tetanus.

F. (*b*) *Experiment 4.*—To show that Tetanus spores and 1 c. c. of Haffkine's Fluid may not in certain doses be enough to produce Tetanus.

A guinea pig received subcutaneously 1 c. c. of the above heated culture + 1 c. c of Haffkine's Fluid. No Tetanus.

Experiments made from the heated culture gave abundant growth of Tetanus in 4 days.

F. (*b*) *Experiment 6.*—A one month old culture of the same batch as that used in the previous experiment, had all the supernatant fluid filtered off from the bacillary deposit. It was made up to its original volume with fresh broth. A series of guinea pigs were inoculated with quantities of this and 1 c. c. of Haffkine's fluid.

Guinea Pig 1.	1 c.c.	+ 1 c.c. Haffkine's fluid.	Slight Tetanus;	recovery.
2.	1/10	"	"	"
3.	1/100	"	"	"
4.	1/1,000	"	No Tetanus.	"
5.	1/10,000	"	"	"
6.	1/100,000	"	"	"
7.	1/1,000,000	"	"	"

This experiment shows that Tetanus spores and Haffkine's Fluid may not when injected together in certain doses, produce Tetanus.

F. (*b*) *Experiment 7.*—An emulsion of sporing Tetanus bacilli, which had been grown on agar, was made with sterile broth, a piece of straw, 3 × 10 m. m. in length, which was picked up outside the Laboratory, was then soaked in this emulsion, placed in a sterile tube and allowed to dry in the 37° C. incubator for 120 minutes. This piece of straw was then added to 21 c. c. of carbolised

Haffkine's Fluid, well shaken for 2 or 3 minutes, and the following mice injected with ½ c. c. of this contaminated Haffkine :—

Mouse No.	X	Alive 14 days later.
	XI	(Not whole of ½ c. c.) found dead day after.
	XII	Found dead.
	XIII	Died 3 days after ; no sign of Tetanus.
	XIV	Alive 14 days later.
	XV	"
	XVI	"
	XVII	"
	XVIII	"
	XIX	Not inoculated ; found dead following day.
	XX	Died 2 days after ; no sign of Tetanus.

The experiment shows that a series of susceptible animals inoculated with Haffkine's Fluid which has been seriously contaminated immediately before injection with sporing Tetanus do not necessarily all contract Tetanus. Of the animals that died none showed the symptoms of Tetanus which are so characteristic in the mouse. Of 11 mice in the Series 5 died, but 2 of these had not been inoculated. A number of cases of Mouse Diphtheria occurred at this time.

G.—EXPERIMENTS.

With a Syringe contaminated with Tetanus.

G. Experiment 1.—A syringe of 20 c. c. capacity was filled with an 8 days' old broth culture of B. Tetani. The contents were syringed out gently in quantities of 1 c.c. Cultures were made from the first and last c.c. of the 20. The syringe was then filled with 1 : 20 carbolic acid, which remained in the syringe for 4 minutes. The carbolic solution was then ejected and the syringe filled with Haffkine's Fluid. This was injected by separate c.cs. into a series of Sulphindigotate broth tubes. All the tubes were put under anærobic conditions at 37°C. In 4 days the tubes inoculated during the first syringing before the carbolic solution was drawn into the syringe all gave good growth. The series of tubes inoculated after the carbolic solution showed a certain irregularity of growth.

I, V, VI, VIII, XI, XII, XVI showed growth.

II, XVIII and XX showed no growth.

The numbers refer to the sequence of quantities of 1 c.c. each expelled from the syringe, the numbers missing are those which were discarded and not used to inoculate tubes of media.

G. Experiment 2.—The needle of a syringe of 20 c.c. capacity was dipped in a sporing broth culture of Tetanus and allowed to dry for 3 hours in the incubator. It was filled with Haffkine's Prophylactic Fluid and successive doses of 1 c.c. ejected. Some of these were injected into guinea pigs and others into test tubes as shown in the schedule.

1st c.c. into	Guinea pig	... Slight tetanus.
2nd	Test tube	... Growth tetanus.
3rd	—	... —
4th	Guinea pig	... Slight tetanus.
5th	Test tube	... Growth tetanus.
6th	—	... —
7th	—	... —
8th	Guinea pig	... Well.
9th	Test tube	... —
10th	—	... —
11th	—	... —
12th	Guinea pig	... Well.
13th	—	... —
14th	—	... —
15th	—	... —
16th	Guinea pig	... Well.
17th	Test tube	... Tetanus growth.
18th	—	... —
19th	—	... —
20th	Test tube	... No tetanus.

The syringe was then filled with carbolic solution of 1 : 20 for 3 minutes which was then ejected, and the syringe was again filled with Haffkine's Prophylactic Fluid. This was ejected in the same way into tubes and guinea pigs.

(a)	Guinea pig	... No tetanus.
(b)	Test tube	... No growth of tetanus.
(c)	—	... —
(d)	Guinea pig	... Well.
(e)	Test tube	... No growth.
(f)	—	... —
(g)	—	... —
(h)	Guinea pig	... —
(i)	Test tube	... —

This experiment shows that a seriously contaminated needle (dried) under the test conditions does not give uniform infective results, either before or after the use of the carbolic solution. The infective material tends to disappear at the end of the ejection of the first syringeful and has disappeared after the carbolic washing.

COMMUNIQUÉ.

At the Health Exhibition organized by the Bombay Sanitary Association under the authority of the local Government in connection with the Industrial and Agricultural Exhibition about to be held in Bombay, a series of demonstrations will be given by the Director of the Plague Research Laboratory of the method by which the fluid used for inoculation against plague is now being manufactured. The primary object of these demonstrations is to enable the public to ascertain by personal observation and by inquiry from the experts in charge of the manufacture, the precise nature of the precautions which are now taken to guard against the contamination of the fluid by disease bearing germs. The Director has been instructed to give full explanations of the process to any one who is interested in the subject.

The system of inoculation against plague with a fluid prepared from the sterilised virus of the disease was introduced in India by Mr. Haffkine early in 1897. The composition of this fluid was subjected to searching inquiry by the Indian Plague Commission who pronounced its employment to be free from danger; and it was used on a large scale in various parts of India without producing injurious effects. In September 1902 the "standard method" of manufacturing this fluid was changed by the Director of the Plague Institute on his own authority with the object of expediting the process and thus meeting the heavy demand then being made by the Punjab Government in connexion with a large scheme of inoculation. The change involved the omission of a small proportion of carbolic acid which had up till then been added to the original fluid as a further precaution against contamination. The new fluid or "water-agar process" contained no carbolic acid, other methods being relied upon to ensure its purity.

On the 6th November 1902, nineteen persons who had been inoculated on the 30th October in the village of Malkowal from a single bottle (labelled 53-N) of the new fluid were found to be suffering from tetanus and all of them subsequently died. A Commission consisting of Sir Lawrence Jenkins, K.C.I.E., Chief Justice of Bombay, Lieutenant-Colonel Bomford, M.D., C.I.E., Principal of the Medical College, Calcutta, and Major Semple, M.D., R.A.M.C., Director of the Pasteur Institute, Kasauli, was appointed by the Government of India to inquire into the disaster. They found that the germ of tetanus had been introduced into the fluid before the bottle was opened at Malkowal, and they thought it probable that this might have occurred owing either to insufficient sterilisation, or to the process of filling the bottle from a larger flask having been performed with defective precautions. They also expressed the opinion that carbolic acid was a valuable agent in restraining tetanus growth when added to plague prophylactic and they therefore thought that its omission was a grave mistake. Experiments undertaken in India by two independent inquirers appeared to confirm this view and their conclusions, together with the data on which they were based, were submitted, with the report of the Commission, for examination and further experiment to the Lister Institute in London. With reference to the findings of the Malkowal Commission, the Institute were asked to report (1) on the comparative efficacy of the standard and new fluids as a protection against plague; (2) on the comparative liability of each fluid to contamination; (3) on the probable origin of the tetanus virus in the Malkowal cases. Their report on these points was received by last mail. They summarise their conclusions as follows:—

"(1) The Institute sees no reason to differ from the conclusions of the Commission that the new prophylactic is not less efficacious than the old.

(2) The Institute is of opinion that in the hands of more or less unskilled workers, it is easier to ensure freedom from contamination by Mr. Haffkine's 'standard method' of manufacturing plague vaccine than with the 'water-agar process' as employed by him.

(3) The Institute is in entire agreement with the Commission as to the value of ·5 per cent. carbolic acid in restraining tetanus growth when added to plague prophylactic and its experiments emphasize still further the importance of this addition in preventing the growth and toxin formation in a vaccine which might be liable to the possibility of contamination with the spores of tetanus.

M

(4) The conclusions of the Institute coincide with those of the Commission that in all probability the tetanus was at the time of the inoculation, in the fluid contained in the bottle, but that it is impossible to determine at what stage in its history or in what way bottle 53-N became contaminated."

Some months ago the Government decided, on the advice of the Director, that only the standard fluid should be manufactured at the Plague Institute. This fluid is sterilised by methods approved by the Indian Plague Commission and contains the requisite proportion of carbolic acid. It is now bottled by a new method, recently patented by Dr. E. Maynard, who was brought out by the Government of India last year for the purpose of perfecting his invention on the spot. It is claimed for this system that it renders it impossible for any germ to enter the fluid from outside. Its efficacy depends not upon chemical or bacteriological considerations but upon a mechanical device, the working of which will be publicly demonstrated at the Exhibition.

HOME DEPARTMENT,
(SANITARY);
Calcutta, the 13th December 1904.

(Sd.) W. S. MARRIS,
Dy. Secy. to the Govt. of India.

The Lister Institute of Preventive Medicine to India Office.

Dated Chelsea Gardens, Chelsea Bridge Road, London, S. W., the 9th November 1905.

From—Dr. CHARLES J. MARTIN, M.B., D.Sc., F.R.S., Director,

To—The Under Secretary of State for India.

In reply to your letter of the 2nd November 1905 (R. and S. 2658), I am directed to state that the Institute is of opinion that the fluid used at Malkowal probably became contaminated with tetanus before the time of opening the bottle at Malkowal, but it also agrees with the Commission (Extracts from the Report of the Punjab Plague Inoculation Commission, page 2547, 5th line) that the possibility of the contamination having effected an entrance at Malkowal cannot be excluded.

Dated Pasteur Institute, Paris, the 14th February 1906.

From—W. M. HAFFKINE, Esq., C.I.E.,

To—The Under Secretary of State for India.

I have the honour to submit the following remarks on the Malkowal tetanus accident, and the reports thereon by Sir L. Jenkins' Investigation Commission and the Lister Institute.

2. The Commission's enquiry brought to light certain facts which pointed to the conclusion that a bottle contaminated with tetanus germs, at, or very shortly before, the time of its use, was the cause of the accident. The details of the operation itself, at the time of opening the bottle, were further found to have been directly conducive to such an accident.

The Investigation Commission subordinated these facts to an *à priori* thesis according to which contamination of the bottle at Malkowal could not have affected 19 persons in the way it did. I make some remarks on this thesis in the appendix to this letter under (1*a*) and (1*b*).*

* *Vide* Appendix (*Ia*) and (*Ib*).

3. Surgeons are aware that man in extraordinarily susceptible to tetanus, that to cause an accident, an invisible impurity on the cleanest instrument may be sufficient, and that to obviate such accident efficacious processes of sterilization must be resorted to.

Similarly, a multiple infection with tetanus germs from an insignificant impurity or derived from one and the same apparently clean instrument can be realised experimentally.

The Lister Institute has, therefore, rightly reported, in their letter of November last, that the possibility of contamination having effected an entrance into the fluid at Malkowal could not be excluded.

This proposition sets aside the thesis which the Indian Commission had opposed to the facts above referred to, and upon which they condemned my laboratory.

I recapitulate here the facts in question, and believe it useful to state my remarks with a certain amount of detail; an abbreviated summary of them is, however, given on pages 5* and 6* below.

On pages 6† to 10† are mentioned the circumstances of the Malkowal operations.

Certain essential points, which I consider by themselves, are referred to, in the form of an appendix, on pages 11‡ to 20.‡

On pages 21§ to 28§ I examine the Indian Commission's report, and on pages 29|| to 32|| that of the Lister Institute.

A.

The first and the most direct indication regarding the origin of the Malkowal tetanus germs has been referred to in my letter to you of 6th December last. At the temperature of the Indian climate, when left for a day or two in the plague prophylactic, these germs develop a pungent disagreeable smell, which becomes the more accentuated as the culture gets more matured.

I refer to this subject in the Appendix under (2).¶

¶ *Vide* Appendix (2).

The Malkowal bottle, which had been prepared 41 days, and despatched from Bombay 26 days, prior to its opening, had, when opened, no odour of any description, but acquired the tetanus smell subsequent to that moment. The matter is dealt with in detail in the Appendix under (3).** The bottle, therefore, had not cultivated tetanus germs even for a few days prior to its opening.

** *Vide* Appendix (3).

The above refers to the only, but at the same time precise, method by which the origin of the tetanus germs could be indicated by an examination made at the time of the operations.

The facts elucidated subsequently and mentioned below have all proved the correctness of that examination, as well as the straightforwardness exhibited by the Malkowal operators in their depositions. To some of those facts I drew the Commission's attention in Bombay; others I was only able to mention hypothetically, as my information at that time was incomplete; others again appeared subsequently, in the course of laboratory experiments made by Sir L. Jenkins' Commission, the Lister Institute, and by myself. I quote in the lines below only the testimony derived from the experiments of the Commission and the Institute.

B.

While most of the microbes around us (the so-called saprophytic or harmless germs) require air for their propagation, the activity of the germ of tetanus is, on the contrary, inhibited by the oxygen of the air. The result of this particularity is that there exists a fundamental difference between the behaviour of tetanus germs which are corked up in a bottle full of fluid, and of those that may find themselves in a few drops let in a spacious receptacle full of air.

It has been found that in the "water-agar" plague prophylactic tetanus germs give a particularly abundant growth, and that in a bottle filled in the ordinary way, up to the top, and corked, a rich and very active culture develops in a few days.

Lieutenant-Colonel Semple of the Investigation Commission tested the actual specimen of tetanus bacilli obtained from Malkowal; and contaminated with it ordinary, *i. e.*, full, bottles of the Bombay water-agar prophylactic as used in the Punjab in 1902.

This contamination he effected sometimes with tetanus bacilli alone, at others, with these bacilli associated with harmless microbes, as they are always

* Pages 2634-5 of this Supplement.
† Pages 2635-8 of this Supplement.
‡ Pages 2639-47 of this Supplement.
§ Pages 2648-54 of this Supplement.
|| Pages 2655-8 of this Supplement.

found in nature. He examined his bottles after seven days and found under all circumstances a rich growth of tetanus, which affected animals when inoculated in very minute doses. His experiments show that the amount required for such an effect were many hundreds of times smaller than the doses of an ordinary tetanus culture essayed by him about the same time. The effect on the animals was also very much quicker, as is to be seen in the appendix to this letter under (4).* This represents about the condition in which a tetanus culture would have been found in the Malkowal bottle No. 53-N, had that bottle been contaminated in Bombay four to seven weeks previously, or even only seven days before its opening at Malkowal. For it must be mentioned that a culture of tetanus goes on maturing for about a fortnight, and its "toxicity" continues further to increase for another fortnight. A Bombay contaminated bottle would have been, therefore, in these two respects (abundance of germs and of toxic matter in the fluid), richer than the bottles experimented with by Lieutenant-Colonel Semple.

* *Vide* Appendix (4).

On the other hand, when a bottle of prophylactic, just contaminated with an impurity, is emptied of its contents, and only a few drops of fluid remain in it, the development of tetanus germs in such remnants is inhibited by the air, and either does not take place at all, as was the case in the experiment made on the subject by Lieutenant-Colonel Semple (Appendix B of the Commission's Report, Experiment 7) ; or else a culture does take place, but only in proportion in which other germs present use up the oxygen of the air (*vide* Lister Institute's Report, Section 3, and Appendix E, Experiments 5 to 8). Such a culture is always reduced, in a degree varying with the circumstances, as regards its abundance and toxicity.

A small sample of fluid remained in the bottle after the Malkowal operations and was examined by Lieutenant-Colonel Semple, at Kasauli, 15 days after the bottle had been used. In this sample he found an association of a common microbe with what in his view was "a poor growth of tetanus" in comparison with what should have been there had the culture been growing for only a week in a full bottle. (*Vide* the Indian Commission's Report ; also Appendix to this letter under 5*a*).† The effect of that fluid on animals was also several times weaker and slower in action than what he found in cultures grown in full bottles (Appendix to this letter under 5*b*).‡

† *Vide* Appendix (5*a*).

‡ *Vide* Appendix (5*b*).

The condition of the bottle on its examination at Kasauli corresponded, therefore, to that of a bottle in which tetanus had grown after it had been emptied, and not to that of a bottle in which the germs had resided while it was full ; and this finding corroborated the result of the primary examination made at Malkowal.

C.

The following details show the difference in the conditions under which accidental tetanus cases occur, and those in which the Malkowal patients would have been infected had bottle 53-N contained a several weeks' old tetanus growth.

In the ordinary course of events man can get into his tissues only a mere trace of tetanus virus ; for every visible impurity affecting him is immediately removed ; a splinter or thorn is pulled out ; an injured surface of the skin is washed and left to all appearances clean, etc. . . . .

But a tetanus bearing impurity, when effecting entrance into a cultivation medium, gets multiplied an infinity of times ; and, as stated, the plague prophylactic has shown itself to be a particularly rich medium for such a multiplication. An ordinary clinical case can never get infected with anything approaching in amount a measured volume of such a culture ; which volume in the Malkowal cases was that of 1½ c.c. Approximately a hazel-nutful of an extremely rich tetanus growth would have been left under the skin of every man inoculated, in place of what can remain after the withdrawal of a thorn, or the washing of an abrasion or wound.

Further, it most frequently happens that a man gets the germs of tetanus on to a superficial scratch or upon an open wound. If, on the other hand, they

are carried into deeper tissue, and the wound gets closed over them, this represents an important aggravation of the case.

In the Malkowal instance the infection was carried right under the skin by means of the hypodermic needle; and upon the withdrawal of the latter the puncture closed immediately, first by elasticity and then by healing.

The prophylactic produces, in the case of man, at the seat of injection, an inflammation which develops in a few hours and causes a swelling and induration of the tissue involved. The site so inflamed is comparable to a severe contusion, which, even in a slight form, is known to be an important determining factor in tetanus. (It may be remarked here that the skin of guinea pigs and mice on which tetanus experiments are generally made, is not so affected even by large doses of the plague prophylactic. In their case there are other agents by which it is possible to create a state corresponding to the above inflammation.) This circumstance should have placed the Malkowal cases in a great disadvantage.

Lastly, when the tetanus germ gets into animal tissue and the requisite predisposing conditions exist, such as a contusion, or more severe injuries, or the presence of impurities leading to local inflammation, etc., the germ starts manufacturing toxic substances which cause the clinical tetanus symptoms. A certain time is required for the elaboration of these substances; and then another period passes during which the tissues susceptible to this virus, notably the nervous centres, are gradually reached. The two periods make up the "incubation" interval between contamination and the appearance of first symptoms.

But these germs manufacture also toxin in artificial cultivation media. In the case of tetanus the toxin thus produced is of a potency unequalled by any other microbial toxin so far known. Various strains of the same species of microbes, and various media in which they are grown differ, however, in regard to the amount of toxin which they elaborate. Regarding the Malkowal microbe, it has already been mentioned that a bottle of prophylactic in which it had been growing only for seven days, appeared to contain a virus many hundreds of times more deadly than that found by Lieutenant-Colonel Semple in an ordinary tetanus culture. Its section was also several times quicker than that of the latter. (Appendix to this letter under (4)). Had, therefore, the Malkowal bottle been contaminated in Bombay, the patients would have received into their tissues 1½ c.c. of such a potent and rapidly acting toxin ready prepared, instead of, as is the case in accidental tetanus, benefiting by an interval required for the elaboration of toxin in their own tissues.

The large amount of germs that would have been present in a dose of 1½ c.c. of a Bombay contaminated prophylactic, as compared with the doses in accidental cases, the introduction of that dose deep under the skin, the predisposing inflammation created by the prophylactic and the presence of 1½ c.c. of ready made and rapidly acting toxin, should have caused the disease to manifest itself with a rapidity and gravity far above those observed in natural cases; but, whereas in ordinary practice cases may be met with of an incubation period of less than 24 hours ending fatally within another 24 hours, the patients infected at Malkowal took four and five days to develop the first symptoms, and the length of their illness—which in tetanus is usually fatal—varied from two to five days and in one case was of one day. (Some remarks on this matter are made in the appendix under (6).*)

* *Vide* Appendix (6).

The Commission had before them an important term of comparison in the isolated case of tetanus which they investigated together with the Malkowal case, and which had occurred at Ferozepore, Punjab, 11 days before the accident at Malkowal.

On this case the Commission reported as follows:—"We are satisfied that the isolated case of tetanus cannot be ascribed to contaminated fluid." The contamination was therefore conveyed through that natural dose of a tetanus impurity, unmultiplied by growth in a culture, as causes ordinary tetanus cases. The patient died 2½ days after the time when she was inoculated, the first symptoms appearing less than 24 hours after that time, and the illness lasting 36 hours. The details of the case are reproduced in the Appendix of this letter under (7).†

† *Vide* Appendix (7).

The Malkowal cases were less affected by the contamination which fell to

their lot. The character of their disease, when compared to that of the Ferozepore case, was such as to induce one almost to say that the amount of tetanus impurity which, in Ferozepore, affected a single person, was, in Malkowal, divided by an accident of procedure, into 19 shares, and weakened in its effect.

D.

Lastly, the following fact refers to the condition of the fluid at the time of using it at Malkowal.

The syringe with which contents of bottle 53-N were injected was dealt with afterwards as follows : it was filled with carbolic lotion 1 in 20, left so for a few (3 or 4) minutes ; then the lotion was squirted out and the instrument used for inoculating other people. None of the latter suffered. In a culture of 4 to 7 weeks, as it would have been had the bottle been contaminated in Bombay, and even in one of a much shorter duration, tetanus germs develop "spores" or special forms of resistance, made to withstand heat, desiccation, adverse chemical action, etc. For destroying such spores by carbolic lotion an action of some 15 hours is required. The procedure applied to the contaminated syringe thus amounted practically to an imperfect cleaning.

If spores of such an abundant culture as would have developed in a bottle of prophylactic had been drawn into the syringe, the above cleaning would have left the instrument very grossly contaminated (*vide* the Lister Institute's Report, Appendix G, Experiment 1; and the Indian Committee's Report, Appendix B, Experiment 2).

The fact that the passage through that instrument of one syringeful of lotion was sufficient to render it harmless, points to it having been in contact with only a small amount of impurity, such for instance as was experimented with by the Lister Institute in Appendix G, Experiment 2. The force of this argument is the greater that, as has been mentioned already, man is so sensitive to tetanus that an imperceptible trace of virus left on a surgical instrument, exposes him to the disease ; and in the Malkowal circumstances the subjects were made particularly susceptible by the inflammation from the prophylactic injection.

SUMMARY OF THE ABOVE.

The following facts indicate that the germs of tetanus had not effected an entrance into the Malkowal bottle even only a few days prior to its opening.

The bottle was odourless at the time of using it, whereas in less than three days a tetanus odour becomes unmistakeable in a contaminated bottle.

Tetanus germs generally and the Malkowal specimen in particular, when growing in a full bottle of prophylactic, give in a few days a rich and extremely active culture ; whereas in the sample left in the Malkowal bottle a poor culture was found of a much lesser activity, such as would develop in the remnants of prophylactic fluid, in a bottle emptied of its contents.

The character of the disease exhibited by the 19 patients was that observed in average clinical cases in India, of a not very severe description, *i.e.*, in cases due to minute accidental doses of virus, not multiplied by culture ; and that character is incompatible with the supposition that the Malkowal cases were injected with 1½ c. c. of a virus of such potency as was found in infected, full, bottles of prophylactic, after even only a few days' accumulation of virus in them.

And, lastly, the fact that contamination could be easily removed from the infected syringe and the latter rendered harmless indicates that it had been in contact with only a small amount of virus ; whereas when brought in contact with a seven days' old culture, it has been shown to retain, after rinsing, enough infection to affect 17 animals out of 19, *i.e.*, probably 13 out of 13 injected with a first syringeful, and four out of six injected after a further dilution.

The Indian Commission reported to have "*found that the germ of tetanus had been introduced into the fluid before the bottle was opened at Malkowal,*" *and attributed the accident to one of the laboratory operations* (*vide* the

Government of India's *communiqué* to the Press of December 1904). Not one of the facts of the case contains the slightest indication to this effect; everything brought out by the enquiry points in the opposite direction; and the Commission subordinated all direct indications to a thesis adopted *à priori* and negatived in the Lister Institute's statement of December last.

THE CIRCUMSTANCES IN WHICH THE MALKOWAL ACCIDENT TOOK PLACE.

The circumstances of the operation as carried out on the occasion in question were directly conducive to an accident; and the latter was rendered possible by the *technique* prescribed to the Punjab operators, which substituted a process of momentary submersion ("dipping") in carbolic lotion for sterilization by boiling and burning as prescribed by the Laboratory.

Tetanus germs are derived in nature from the soil and from manure of herbivorous animals, such as cattle and horses. The two schools of writers on the subject, the *telurists* and *equinists*, are only divided on the point as to whether the soil primarily infects forage and the intestinal tract of animals, or animal manure infects the soil. A culture of tetanus goes on however in both these media. The presence of tetanus germs has been detected in a certain number of instances also outside their breeding ground; but under the effect of light and oxygen, *e.g.*, when carried with dust into the air, pathogenic germs lose rapidly their specific properties; and one has to go to the particular medium or animal in which a microbe has its appropriated habitat, to find it in nature. Thus, glanders is practically never contracted outside stables or without contact with diseased animals; anthrax, outside wool and hide factories; the risks of tetanus, in common life, are only thought of when, in a riding, or bicycle, or motor-car accident, a wound is inflicted soiled with earth or stable manure, and a surgeon thinks of these risks when he is reduced to operating in the open or in a place exposed to gusts and to freshly raised earth particles.

The *technique* prescribed by the laboratory for guarding against accidents was contained in a set of printed instructions enclosed in each box of prophylactic bottles. The portion indicating how the latter must be opened without contaminating their contents was recapitulated again upon a strip of coloured paper pasted around each bottle in such a way as to render it necessary for the operator to deal with that strip before getting at the stopper.

I think it desirable to reproduce here the corresponding part of these instructions.

According to the latter the hypodermic needles are to be sterilized either together with the syringe, after being fixed on the body of that instrument, notably by means of hot oil, as recommended by the Government of India, or else separately from the syringe, by boiling in a cup of water or in a test-tube for 10 minutes befor use. The instructions prescribe that this—

> "Procedure is to be repeated every time a needle happens to fall on the ground during the operations, as the ground dust contains dangerous micro-organisms. After boiling the needle is not to be touched with the fingers, but taken out with a pair of forceps, the points of which have just been heated in a lamp."

> "Dissecting forceps are to be used for removing the stopper. The branches of the forceps are heated in the flame of a spirit lamp immediately before use and guarded from contact with any unsterilized object afterwards.

> "The stopper and neck of the bottle are then passed several times through the flame of a lamp, so as to cause very slight singeing of the stopper, and the latter is withdrawn with the heated forceps. After the bottle is opened any contact between its mouth and other unsterilized objects is to be carefully avoided, and if contact inadvertently occurs, the mouth is to be heated again in the flame to disinfect it. The contents, or part thereof, to be then absorbed

into the syringe. The bottle is kept as nearly horizontal as possible during the whole time the cork is out. During the time the stopper is withdrawn from the bottle it should be held in the sterilized forceps, and care taken not to let it touch the table or other unsterilized object. It may, however, be deposited in a dish of carbolic solution, if assistance is not to be had, until replaced in the bottle."

The "Punjab Plague Manual, 1902," issued to the operators shortly before commencing operations, and regarding which I was not consulted, entrusted the handling of the fluid to Indian compounders and partly to villagers, and substituted for the above laboratory instructions, notably for that portion which pertained to the manipulations entrusted to these assistants, the following simplification, in which, as stated, dipping in carbolic is prescribed in place of sterilization by burning:—

Instructions referring to the Inoculator.

"Having arranged his apparatus the inoculator sterilizes all the needles he intends to use by dropping them into oil heated to 160° C.

"After immersing his needles in the heated oil the operator should place them in carbolic lotion until required for use."

Instructions referring to the Compounder or Villager.

"The compounder, in proceeding to open a bottle, must shake it well, then dip its neck into carbolic lotion, 1 in 20, and then with a pair of dissecting forceps, which, when not in use, are to be kept in the carbolic lotion, remove the cork, holding the bottle as horizontally as possible without spilling its contents; the cork is to be kept in carbolic lotion while the syringe is being filled, and is to be replaced immediately after. If there is great stress of work the duty of actually opening the bottles may be entrusted to any intelligent person, care being taken to see that he observes the above instructions carefully." (*Report on plague and inoculation in the Punjab from 1st October 1902 to 30th September 1903,* by Major E. Wilkinson, I.M S., p. 32.)

Unfortunately, while microbial germs and their spores are devitalized by heat long before organic matter which constitutes their substance begins to get singed, not alone dipping in carbolic of 1 in 20, but a 10 hours' residence in that antiseptic, has been shown to leave the spores the faculty of causing tetanus when injected into animals.

The *technique* of the "Manual" appears to have been from the first corrected in actual practice by many of the inoculators, in some cases in essential, in others in less essential, details. In certain instances, however, even the "Manual's" prescriptions were considered superfluous (*Vide* the Punjab inoculator's evidence, Sir L. Jenkins's Commission.)

The circumstances in which the inoculations were done at Malkowal have been described by Dr. Elliot, the inoculating officer, and his assistant, in the following works:—

Dr. Elliot's evidence:—

"I did my work in the open, under trees on the outskirt; it was surrounded by houses on three sides; it was about 30 feet by 40 feet; the backs of the houses looked over it; there were cattle on the other side.

"There were no animals, excepting my horse, which was being walked about . . . . The square was hard ground; I do not remember seeing droppings of animals.

"My bottles and instruments were placed on a table brought over from my camp. By the time I arrived everything was ready; this was done by the compounder.

"When the compounder opened the bottle he handed it to me to smell. I am sure it was the compounder, and not a villager; a villager has never assisted me to open a bottle; I would not trust him; I would not trust the compounder without his being under my eye."

When Dr. Elliot was opening a bottle personally, he, in accordance with the prescriptions of the "Manual," "did not heat the neck of the bottle before opening. I placed it in carbolic solution."

The compounder, on his part, stated :—

"I opened it according to the instructions in the "Manual." I took off the label with a forceps; I always did so. I shook the bottle and put the neck into carbolic lotion. I then took out the cork with the forceps."

While he thus followed the "Manual's" *technique*, and was entrusted with the handling of the fluid (Chapter IV, paragraph 32 (8) of the "Manual": "the opening of the bottles of prophylactic and the filling of syringes are the chief duties of the compounder"), he showed his concern about the dangers of soil contamination in general, and described the occurrences at Malkowal, in the following words :—

"I noticed loose cork. Dr. Elliot used to see them.* The prophylactic in these bottles was used. The cork at Malkowal was not loose. I remember it was a very tight cork, and the forceps fell out of my hand on the ground. I cannot say whether Dr. Elliot saw it. I swished the forceps in the lotion and then pulled out the cork with it. I never mentioned it to anyone before. The circumstance was recalled when I was asked whether the cork was tight. I am certain it happened to the first bottle at Malkowal. I never gave it a thought before. I am certain I dropped the forceps; the forceps also fell on the ground in Gujarat itself: it was at the fourth bottle. The forceps has fallen down on many other occasions. † I do not remember having been asked whether the cork was dropped. The cork used to fall very often; and it was put in the antiseptic. I did not drop it at Malkowal. Forceps may have fallen at other places besides Malkowal and Gujarat, but I have no recollection.‡ I do not know any one alive who saw the forceps drop. § The cork had begun to move when the forceps dropped."

111,337 inoculations were done in the Punjab in October 1902 (besides some 20,000 in other parts of India); and Sir L. Jenkins's Commission ascertained that there had not been one accident throughout all those operations attributable to the fluid, barring the Malkowal case, which they pronounced to be so attributable. The immunizing effect and saving of life brought about by that fluid was also ascertained by them, and more fully later on. The details of the Punjab Government's Report referred to above indicate that 3,832 deaths from plague were averted by the use of the prophylactic in that month.

But besides the Malkowal accident, and prior to it, 10 instances of fatalities following close upon inoculation, and one of which, as already mentioned, was a death from tetanus, as well as a certain number of minor accidents, notably abscesses, attended the Punjab inoculations of that month and led to an order, issued before the Malkowal case had come to light, to cease the employment of the prophylactic then in use. (Letter of 9th November 1902 from Mr. C. J.

* Dr. Elliot judged, by the "restriction on the cork," that a certain cork "had been prised out." The restriction was seen when a cork from a bottle with a larger neck was used in one with a narrower neck.—W. M. H.

† The details of this reply were as follows :—On his having made the statement above the Commission asked him whether he was aware of the gravity of what he was saying, and knew that by having picked up the forceps from the ground and used it in the way he did he might have been the cause of the death of 19 people. To this he replied: "Why should I be the cause of the death of these people? The forceps fell on many other occasions and nobody died."

‡ The Commission pressed the witness to substantiate his statement by giving the names of the villages and the number in the order of bottles at which mishaps occurred, and he replied that these particulars he could not recall (not that he could not recall whether forceps had fallen at other places).

§ He said the lambardar (head villager) who assisted him at Malkowal was dead, and he did not know who else might have seen the forceps drop.

W. M. H.

Hallifax to the Secretary to the Government of India, Home Department, and *Report on Plague and Inoculation in the Punjab from 1st October 1902 to 30th September 1903*, by Major E. Wilkinson, Chief Plague Medical Officer, Punjab, page 50.)

These fatalities occurred in single individuals inoculated from different bottles of prophylactic; and for none of the cases could the Laboratory be made responsible. For, while it is possible to contaminate a bottle at the place and time of the injections so as to affect each dose of the fluid, a contamination of a bottle occurring previously and left to multiply in the fluid, at the Indian temperature, for several weeks or even only days, must unavoidably spread in the whole of that fluid. In none, however, of the cases of fatalities just referred to did any other person inoculated from the same bottle suffer.

Sir L. Jenkins's Commission went so far as to ascertain that it was impossible to connect these occurrences with the employment of fluid contaminated at the Laboratory; and regarding the abscesses they went a step further, and reported that it was "impossible to connect them with the fluid rather than with defective inoculation."

The Malkowal misfortune put the operators on their guard.

Dr. R. W. Gray, inoculator in the Jullunder district, said, amongst other witnesses, in regard to his operations :—

> "The compounder under my supervision removed the paper and cork with a forceps, but without putting the neck of the bottle into carbolic or flame . . . . My method of opening the bottles was not strictly antiseptic . . . After hearing of deaths I took additional precaution by sterilizing the neck of the bottle by the flame."

General measures were also taken :—

> "The necessity was impressed on all District Plague Medical Officers of bringing to light all defects and deficiencies in equipment, and for seeing that everybody was thoroughly instructed in his duties." (Major Wilkinson's "*Report on Plague and Inoculation*," page 46.)

I am aware that five of the ten fatal occurrences were subsequently mentioned by the operator with whom they had happened as due to plague contracted previous to inoculation, and that the Chief Plague Medical Officer, Punjab, in the Report above quoted, refers now to all of these 10 fatalities, excepting the tetanus death, as due to plague.*

But all these cases took place prior to the revision of the inoculation *technique*; and no fatality coincident with the injection, and at the same time, standing in no possible connection with the kind and quality of fluid † supplied from Bombay, came to light in the subsequent 370,000 inoculations of that season, though opportunities for such coincidences were multiplied many times over what they were in the October inoculations. To this extent the origin of the Malkowal accident necessarily derives elucidation from the other grave occurrences as far as they were investigated.

Of the abscesses (*vide* the Punjab Report, page 51), 23 occurred, in three groups of persons, in that same month of October. The date of the remainder, *viz.*, 14 abscesses, is not stated, but they all occurred in single individuals inoculated from different bottles, notably seven from bottles of "old" prophylactic and seven from those of "new."

* *Vide* "*Report on Plague and Inoculation, etc.*," page 51, paragraph 90. The following remarks are essential. Captain Perry, I.M.S., who had inoculated the tetanus case, did not say in his evidence before the Commission that the woman had fever at the time of inoculation nor did his assistant. Tetanus is not characterised by a febrile condition in the incubation stage, and often there is no rise of temperature throughout the whole course of the disease. The reference to another case in the same house differs notably from the evidence recorded by the Investigation Commission. [*Vide* Appendix to this letter under (7).] Tetanus is not taken from another case.

† Only a small number of inoculations was done in October with the so-called "old" or "Standard" prophylactic, and a very large proportion with the "new." Accordingly, of the 10 fatalities, nine fell to the operations with the "new" fluid and one to those with the "old."

APPENDIX TO PART I OF THIS LETTER.

I now submit remarks on certain points touched upon in the foregoing text and marked therein for reference by bracketed figures.

THE COMMISSION'S PERMEATION THESIS.

(1*a*) The following is the Thesis upon which the Commission reported to have found that the Malkowal bottle was contaminated prior to its opening, notably in the Laboratory:—

> "The specific contamination permeated the whole fluid in the bottle as is shown by the uniform results on the sufferers, and without a series of suppositions opposed to all reasonable probability, these results can only be attributed to a growth of some duration, though not necessarily of great vigour, a view strongly supported by the experiments mentioned above."

The experiments are referred to lower down, under (1*b*). The following concerns the rest of the proposition.

The Commission do not specify the suppositions involved in their thesis; but it embodies obviously the following one: an impurity having fallen into the fluid, the latter would afterwards be drawn into the syringe through the narrow lumen of the hypodermic needle. This must have caused a fair mixing up of the contents. The contamination though permeating every dose, even fraction of a dose of this fluid, as happened in Lieutenant-Colonel Semple's Experiment 8, Appendix B, and in mine, Appendix C, of the Commission's Report, could not, in the Commission's opinion, permeate it so uniformly as to correspond to the degree of uniformity exhibited by the Malkowal cases (incubation period of four and five days; length of illness varying from one to five days; issue, as is practically usual in tetanus, fatal).*

The Lister Institute refers to the above supposition thus: "That the growth was a fairly uniform one, as must be supposed from the similarity and fatal issue of the disease in the 19 cases."

Had an impurity fallen into the bottle at the time of using it, variation in the dose of tetanus virus contained in different portions of the fluid, should have caused variation of the disease, notably a greater variation than was observed at Malkowal; this is the supposition involved.

But this supposition is destructive of the one which the Commission adopted a few lines higher up, when they were dealing with a most decisive feature of the case.

Notably, they were confronted with the variation of dose as is exhibited, on the one side, by the unmeasurably small amount of virus which "clinical cases" get infected within nature; and, on the other, the dose of 1½ c.c. of a several weeks' accumulation of microbes and toxine which would have been injected into the Malkowal cases had tetanus been growing in the bottle since its preparation or its despatch from Bombay. In the presence of this extraordinary variation of dose the Commission laid it down that the Malkowal patients might have exhibited the same course of the disease as is exhibited by not very severe average clinical cases in India. (The matter is referred to in the text of this letter under C.) In this case the variation of dose was not considered by them as entailing a variation in the resulting disease.

The Commission showed that they were aware of the incompatibility of the two suppositions when they inserted in their thesis the words "though not of great vigour," which are obviously meant to mitigate the contradiction contained in their preceding passage. But this reservation is also inadmissible. For, had the bottle been contaminated in Bombay, the vigour of the growth that

* Report, dated 12th November 1902, from Captain C. James, I.M.S., Inspecting Inoculation Officer to the Chief Plague Medical Officer, Punjab.

would have developed in it, is now known—*vide* the text of this letter under B. It would have been *great*, and this is in the way of the Commission's conclusion.

The following seems to me the correct conception of the matter :—

(*a*) If the Malkowal cases exhibited the same course of illness as average clinical cases in India do, this is a decisive indication that the dose of virus which they received substantially corresponded to the natural dose, unmultiplied by culture, which clinical cases get in spontaneous infection.

(*b*) Whatever amount of uniformity the Malkowal cases exhibited, is intelligible in view of the common origin of the tetanus specimen injected, and of the common way in which the patients were contaminated, for in 19 *natural* cases the infecting microbe would have varied as to its origin, and consequently, its biological and toxic properties, and as to the accidental impurities which would have accompanied it; the mode of infection would have varied as to the part of the body involved (trunk, limb, or head), the depth of the wound and the kind of tissue in which the microbe had been deposited; as to the extent of contusion or mortification inflicted on that tissue at the time of infection and so forth. In the Malkowal cases all these conditions, which are known to be the direct determining factors in the character which this disease assumes, were the same in each patient, *viz.*, the same strain of microbes; the same accompanying impurities; the prophylactic as cause of the predisposing inflammation; the same part of body, the arm; the same subcutaneous tissue involved; the same closed wound, *viz.*, that from a puncture of a hypodermic needle, etc. With all this, their cases presented enough variety to be put on the account of the variation of dose and the variation of individual idiosyncrasies.

And, lastly, (*c*). There is reason to suppose that the virulence of toxic properties of the Malkowal germ were very considerable. For if the estimate given in this Appendix under (4) is correct, and approximately it is surely so, that germ, in doses of 1/2,400 c.c. and 1/43,200 c.c. (Lieutenant-Colonel Semple's Experiment 2, Appendix B), produced the same effect as an ordinary culture, used on the same Indian guinea pigs, did in doses of one 1/20 to 1/10 c.c. (his Experiments 3 and 4, Appendix A). It is difficult to put down this enormous difference to the difference of the cultivation medium alone; and the comparison gives a plausible idea of the active properties of the germ itself.

If it is true, and it is hardly doubtful that it is so, that the germ was of a very active variety, this, coupled with the subsidiary inflammation which the patients developed from the prophylactic, should have contributed in causing that germ, even in minimal doses, to take effect with each portion of the fluid with which it was injected.

(*1b*) The following refers to the experiments to which the Commission allude in their above thesis :—

The result of Experiment 5, Appendix B, is antagonistic to that thesis.

Its bearing would however appear somewhat diminished by Lieutenant-Colonel Semple having used for contaminating bottle no. 3 a large platinum loop.

The following is a platinum loop :—

A wire made of that metal, of the thinness of an ordinary thread, is bent so as to form a circle (loop) at one of its ends, thus :—

This is a *very fairly large loop*.

By means of such a wire samples are taken from fluids, etc., containing microbes; the bent end of the wire is dipped into the fluid and withdrawn; a thin film then remains stretched over the circle, and by this film another medium is contaminated when the wire is plunged into it.

When the loop is small, the film of fluid may attain some thickness and form a droplet.

The larger the loop the thinner is the film. Should the diameter exceed that in the above sketch, and generally even in one of that size, when the fluid is a watery one, the film is of a so-to-say inappreciable thinness; and with a further increase of size one finds, on withdrawing the wire from the fluid, that nothing at all remains in the circle—the film breaks.

So after a certain, generally fairly modest, size, the larger the hole of the loop, the poorer a carrier of water it is.

It was such a contaminated loop that Lieutenant-Colonel Semple introduced into bottle no. 3, and he found that every dose taken from the bottle immediately after that, gave tetanus to a guinea pig.

The experiment was a fundamental one, for it was undoing the thesis which was adopted by the Commission only *á priori* and upon which the laboratory was condemned. If the objection to the result was that the loop seemed to the Commission to have been large, it was interesting to repeat the experiment with a loop of a somewhat smaller size, and ascertain that in that case the fluid could in nowise be permeated.

To me, however, such a controlling experiment does not appear to have been necessary. For there existed no fluid cultures of tetanus in the environment of the Malkowal operators; bottle 53-N. is likely to have been contaminated with some solid bit of impurity, and it is certain that an agglomeration of microbes grown into what is called a "colony" on a solid substratum, such as a bit of vegetable, or dung, or cultivation soil, and packed together into a particle even of the smallest dimensions, would have contaminated Lieutenant-Colonel Semple's bottle no. 3 to a far greater extent than the largest, or, to say more correctly, *any* loop dipped into a fluid culture. All those who have made bacteriological analyses of garden earth, or who examined a microscopic slide made from a fluid culture on the one side and from a solid on the other, will agree with this.

In Experiments 6 and 8, Appendix B, Lieutenant-Colonel Semple (and subsequently also the Lister Institute) followed the plan of my Bombay experiment with a bit of straw. But my experiment was intended to show how easily and uniformly a bottle of fluid gets "permeated" with germs from the smallest amount of impurity dropped into it. Indeed, a very fairly even average of 50 colonies appeared in each of the 19 agar tubes which I inseminated from such a bottle immediately after. My experiment was not intended to show the *amount* of contamination which can easily get into a bottle. By moving a bit of straw in a fluid, as Lieutenant-Colonel Semple has done, only a relatively small number of germs will stick to its surface, as the latter, in the case of a straw, is smooth and slippery, and often not easily moistened by a watery fluid; nevertheless that operation appeared *thrice* more than sufficient to convey tetanus germs into each of the 1½ c. c. dose of prophylactic. But certainly the number of germs which could adhere to a straw under the above conditions must have been absolutely trivial when compared to what it might have been if even such a bit of straw had been allowed to reside for hours together in the intestinal tract of an animal harbouring tetanus germs, as would have been one of the natural origins of tetanus. Had I wished to give an idea of the amount of contamination which can get into a bottle handled without precaution, I would have taken not an impervious body as a straw, but the smallest particle of loose garden soil such as mentioned above, and of which, one may say, the whole substance is practically composed of one solid agglomeration of microbial germs. In such a particle of matter the number of microbes is so enormously great as to it being almost difficult to express it in figures.

There is, further, ample ground for saying that even the procedure adopted by Lieutenant-Colonel Semple was sufficient to convey to each fraction of a dose, in bottle no. 4, enough germs not only to be revealed by culture (his Experiment 8), but to give tetanus to an animal or man. For as I had mentioned to the Commission, *Vaillard* and *Rouget* have shown 14 years ago that two or three

tetanus germs, conveyed with a particle of earth, were sufficient to give tetanus to a guinea pig. In the Malkowal cases the inflammation caused by the prophylactic was there to act as a predisposing factor; and in each 1½ c.c. dose of Lieutenant-Colonel Semple's bottle no. 4, there were surely three tetanus germs, for one-third of that dose, *viz.*, ½ c.c., or perhaps even only a sample taken from this, gave a culture in Experiment 8. It contained therefore at least one bacillus, but most probably there were many more than one to start that culture with; for the latter did not take long to develop; "a typical growth of tetanus was present on the third day."

(2)

THE ODOUR OF A TETANUS CULTURE.

The French say about this odour, "Odeur infecte; tout- à-fait désagréable très caractéristique."

Lieutenant-Colonel Semple ascertained for Sir L. Jenkins's Commission whether, indeed, tetanus, notably the particular specimen received from Malkowal, growing in the Bombay water-agar prophylactic bottles (as distinct from usual laboratory cultivation media), gave out a smell. He examined his bottles *seven days* after contamination. The result of one of his trials is given in the Commission's Report, Appendix A, Experiment 5.

In the Malkowal bottle the tetanus bacillus was found together with a micrococcus. This condition was realised in another experiment of Lieutenant-Colonel Semple's, *viz.*, Experiment 6, same Appendix.

In another instance the air was rigorously excluded from the culture; Experiment 7, same Appendix.

In another, instead of associating with tetanus a micrococcus, a different variety of bacteria, a cocco-bacillus, was taken; Appendix B, bottle no. 1.

The Lister Institute ascertained whether the smell was present after *three days*; the result is stated in Appendix D to their Report, which refers to experiments with full bottles of prophylactic, so as to exclude air, the contamination being effected with tetanus alone. Then they made experiments with full and with half-full bottles, the contamination being done with tetanus microbes associated with another bacillus.

Then (Appendix E) they made experiments with 1 c.c. of prophylactic left as a remnant in a bottle of 30 c.c., so as to see whether the characteristic smell would develop in a bottle contaminated at the time of use and emptied directly afterwards of most of its contents, as would correspond to the Malkowal circumstances.

In every instance a contaminated bottle, opened seven, four, and three days after contamination exhibited the characteristic tetanus smell.

(3)

The compounder who assisted the inoculating officer at Malkowal said on evidence, when describing their procedure:—

"Dr. Elliot took out a bottle from the box and gave it to me; that was the first thing in the morning. I was to open the bottle. . . . . . I then took out the cork with the forceps. I kept the cork with the forceps in my hand, and Dr. Elliot smelt the bottle."

The Inspecting Inoculation Officer, in his report on the accident, says: "Dr. Elliot, European Inoculating officer, inoculated 107 persons at this village on 30th October in the forenoon. He seems to have taken great care in performing the operation, and even went so far as filling his syringe with

carbolic acid solution after using up each bottle. This is a precaution I have not known others resort to. He is also a bacteriologist and therefore is in every way a man who can be depended upon in performing prophylactic inoculations."

The Judicial and General Secretary to the Government of the Punjab, in reporting the accident to the Government of India in the Home Department, expressed himself as follows :—

> "Dr. Elliot, the inoculator, adopted every necessary precaution to guard against accident, and he had no reason to suspect the fluid on account of its smell or appearance, or on any other account whatsoever. He was so sure of its harmlessness that he, in a practical way, signified to the people his own readiness to be inoculated with it. . . . . The Lieutenant-Governor desires to place on record the admirable manner in which Dr. Elliot has conducted himself throughout."

The following was the Punjab Chief Plague Medical Officer's statement :—

> "Before commencing to inoculate at Malkowal on 30th October he (Dr. Elliot) offered to be inoculated himself in order to gain the confidence of the people, and had actually bared his arm for the operation when the people said they would be inoculated without this. . . . When the news of the catastrophe was received, Dr. Elliot did all in his power for the unfortunate sufferers, and his devotion has done much to convince the villagers that the calamity was the result of an accident only, and to prevent any outburst of feeling against the Government."

The details regarding the condition of the bottle at the time of using it were, in Dr. Elliot's description, the following :—

> "I went to Malkowal on Thursday, the 30th October. I took the precautions I had already described as being my general method. I am sure I did not omit any of them. I began my operations that morning with 53-N.; I smelt the bottle and noticed nothing; nothing interfered with my power of smelling. I was on the look out as I had discarded a bottle from the same box the previous week. . . . . I have a good sense of smell, and I am positive the bottle did not smell."

The above is from Dr. Elliot's evidence given by him in the Punjab. Subsequently, he and his compounder were asked to come down to Bombay and appear before the Commission again. I was present at their giving evidence, and I find in the records correctly recorded Dr. Elliot's saying :—

> "When the compounder opened the bottle he handed it to me to smell . . . . . I remember smelling the bottle; I perceived nothing; my sense of smell is acute; prior to 30th October I had discarded a bottle on the ground of bad smell."

But after this passage an abbreviation of the records follows, which seems to me to render possible a misunderstanding, and which, as a matter of fact, has led to one.

The lines which follow in the records Dr. Elliot's above declaration are these :—

> "(We test Dr. Elliot with certain bottles; including the Malkowal bottle).
>
> I cannot specialise the smell.
>
> I did not perceive a smell like any of these."

The words are authentic; but by the omission of detail this part of the record has acquired, I think, an effect divergent from that which it had; and this circumstance is reflected in the Commission's subsequent pronouncement on this matter.

I reproduce herewith the corresponding part of the evidence and vouch for the faithful accuracy of every portion of my narrative.

The following were the details :—

In answering questions put to him Dr. Elliot informed the Commission that he knew the slight odour * which the ordinary prophylactic had. When on plague duty in the Bombay Presidency and in Sind, prior to his engagement in the Punjab, he worked with that prophylactic and was well familiar with its properties. On the other hand, the new preparation used in the Punjab was odourless. The bottles he dealt with at Malkowal had no smell of any kind. He remembered the first bottle distinctly. He was going to be inoculated from it himself. He was in no way in a hurry at the time ; the work had not yet begun, and he made his preparations at leisure.

The Commission then placed before him three bottles and asked him to examine them and say what he thought of them.

He picked one up, smelt it, and did not say whether it was good or bad, but put it aside. Then he took up another and said he thought he might pass that bottle ; returned to the first, and said he was not sure of that one, as it had some sort of smell. Then he took up the third bottle, smelt it twice and said that was a bad bottle.

The President asked him whether he was sure of this ; would he reject a bottle of that kind ? and the reply was : He was sure he would. The further question was : Could he specialise the smell in that bottle? To this Dr. Elliot replied that he could not. The President then asked him whether he was familiar with the smell of a tetanus culture, and Dr. Elliot said that he was not. The further question was whether he could say that the Malkowal bottle did not smell like the one just before him ; and he replied that in the Malkowal bottle he found no smell of any kind, neither like that in the bottle he thought bad nor in the one which he was not quite sure about. Then he smelt the condemned bottle again, and said he was certain he would have never used on any man, nor on himself, a bottle like that one.

The President then told him that the bottle he thought bad was the Malkowal bottle ; to this Dr. Elliot made no reply ; and it appeared that the two other bottles were, one, of broth prophylactic : in this Dr. Elliot had indicated a slight odour ; and the other, of water-agar prophylactic.

It seems to me that the above part of the evidence has been inadequately rendered in the two sentences put on record, *viz.*:—

"I cannot specialise the smell.

"I did not perceive a smell like any of these."

It will be also seen that this portion of the evidence can be restituted by taking as witness any average person and making him go through the same examination with similar bottles, as gone through on the above occasion by Dr. Elliot.

The misunderstanding which I have alluded to above is this :—

Had the Commission preserved on record the above details the following two points would, amongst others, have been kept before their consideration :—

1. The missing details put in evidence the difference between perceiving—detecting the presence of—a disagreeable smell, on the one hand, and, on the other, "specializing" it, *i.e.*, defining the particular fermentation by which it is produced.

2. They indicate the difference between the water-agar prophylactic used in the Punjab and which has no smell, on the one hand ; and the ordinary peptone-broth prophylactic, in which the slight odour proper to the peptonized meat is mingled with that of a ½ per cent. carbolic acid added to that prophylactic. Dr. Elliot showed that had he been dealing with the latter variety, he

* Due to the carbolized peptone or broth medium.—W. M. H.

would have differentiated a tetanus contaminated bottle, such as bottle 53-N was at the time of his examining it in Bombay, from amongst normal bottles. But in reality, when working in the Punjab, notably at Malkowal, he was not dealing with that variety of prophylactic, and, as he said, expected a total absence of odour in every bottle which he was scrutinizing.

---

(4)

EFFECT ON ANIMALS OF TETANUS CONTAMINATED PROPHYLACTIC.

a. Vide Experiment 3, Appendix A, Indian Commission's Report:—$\frac{1}{20}$th part of a cubic centimetre of an *ordinary* tetanus culture failed to affect a guinea pig; whereas, in the case of a tetanus culture grown in prophylactic, $\frac{1}{20}$th part of a *droplet* gave tetanus to a guinea pig on the fourth day (Experiment 5, Appendix B).

b. A numerical comparison is possible from the following: *Vide* Experiment 2, Appendix B of the Commission's Report:—

According to the Lister Institute's calculation, the dose of $1\frac{1}{2}$ c c. injected, in the experiment just referred to, into the first 13 animals, corresponded to 1/3,600 of that amount of original fluid, *i.e.*, to 1/2,400 c.c. (*vide* Lister Institute's Report, section 3). These may have been the animals that were first and most severely affected. After the injection of these 13 doses, *i.e.*, of $19\frac{1}{2}$ c.c. of fluid, there should have remained in the 20 c.c. syringe, $\frac{1}{2}$ c.c. of that 3,600-fold diluted virus. This amount was then further diluted, to make up a volume of 9 c.c., by a second refilling of the syringe; and the dilution so effected brought the dose of original fluid, as given to each of the remaining six animals, down to 1/43,200 c.c. These six animals included probably those that manifested symptoms later, and of a milder type, as well as the two that escaped altogether. Now, in addition to being diluted, the doses of that virus were further reduced by the action of carbolic acid which preceded the dilutions and which, besides affecting the fluid itself, eliminated all those germs as had not yet formed spores. Of such, in a seven days' old culture, there is present still a considerable proportion.

The above specified doses are to be compared with the dose of 1/20 c.c. of the ordinary culture (Indian Commission's Report, Appendix A, Experiment 3) which failed to affect a guinea pig, and the dose of 1/10 c.c. which gave a guinea pig tetanus on the third day (same Appendix, Experiment 4). This ordinary culture had not been acted upon by carbolic acid.

The comparison shows an enormous difference, such as it is hard to ascribe to the media alone. Most probably the properties of the bacilli there played a part, and the Malkowal specimen was by far the more powerful of the two, being capable of acting, as well as enabling the culture to act, in extraordinarily small doses. This, of course, has reference to the fact that bottle 53-N contained enough tetanus germs for 19 cases, as has been pointed out above, in the Appendix under (1*a*).

c. The above comparisons refer to the *activity* of the Malkowal germ, grown in prophylactic, as revealed in the doses in which it was capable of taking effect.

The *rapidity* with which it is acted is shown in the following experiments:—From a dose of 1/20 c.c. ofsuch a culture, a guinea pig was found dead the next day (Appendix B, Experiment 1); while double the above dose of Lieutenant-Colonel Semple's ordinary culture only rendered a similar animal ill on the third day (Appendix A, Experiment 4). A culture of the Malkowal microbe, had such been developed in 53-N, should therefore have left to the Malkowal patients a very short incubation period, a matter which is considered in the text of this letter under C.

(5a)

THE CULTURE FOUND IN THE REMNANTS OF FLUID IN THE MALKOWAL BOTTLE.

The following was seen by Lieutenant-Colonel Semple in *full* bottles of prophylactic when they were contaminated with tetanus only seven days before, Experiment 5, Appendix A, Indian Commission's Report:—

"Numerous tetanus bacilli were present in stained specimens."

Experiment 6, same Appendix:—

"Numerous tetanus bacilli and also micrococci were present in stained specimens."

Bottle No. 1, Appendix B:—

"A rich growth of tetanus germs was found; also other bacilli."

On the other hand, when compared to the cultures just referred to, the sample of fluid found in the Malkowal bottle showed what in Lieutenant-Colonel Semple's view was only a poor growth of tetanus. (*Vide* the Commission's Report).

In his original report on that bottle, he says:—

"A preparation made direct from the contents and stained showed a few tetanus bacilli (also micrococci)." *Vide* also the description given by Lieutenant-Colonel Semple at the Commission's sitting in Bombay, on 26th January 1903, and incorporated by the Commission in the evidence which I was giving at that moment (the India Office print communicated to the Lister Institute, page 19)*: "Major Semple observed that when he examined the remnants of the fluid microscopically he found a couple of microbes in a field, in another none, in another a few."

(5b)

Notably, instead of a dose of 1/20 c.c. being fatal to a guinea pig in 24 hours (Appendix B, Experiment 1, Indian Commission's Report), as was the case with a culture from a full bottle; *double* the above dose taken from the Malkowal bottle rendered a guinea pig ill after 24 hours and caused death a day later as was reported by Colonel Semple upon his examination of the Malkowal bottle.

---

(6)

EXPERIMENTAL FACTS WHICH WERE NOT KNOWN WHEN I WAS GIVING EVIDENCE IN BOMBAY.

At the time of giving evidence I refer to the tardy manifestation of symptoms in the Malkowal patients, as well as to some other subjects, as a matter for the Commission's consideration and inquiry. My own information in connection with the point in question was incomplete, notably I did not know, 1°, whether the plague prophylactic, in its water-agar variety, being a vegetable medium, was as suitable for the development of tetanus bacilli as are the special media made for them in laboratories, and in which a virus of great potency is generally developed; and, 2°, whether the particular bacillus found at Malkowal came up to the ordinary standard of potency as observed in tetanus bacilli, or did not possibly fall short of this.

Subsequent experiments gave a very emphatic positive reply on these two points.

On the other hand, I was mistaken in admitting that the tetanus bacillus might secrete in that special vegetable medium as much gaseous matter as it

* Page 2562 of this Supplement.

secretes in other media, containing, *e.g.*, a trace of sugar. Consequently the pressure of gases, which in other instances may cause a stopper to come out with a noise, is not manifested in that way in tetanus contaminated prophylactic, as I thought it might be.

---

(7)

THE CHARACTER OF THE DISEASE EXHIBITED IN THE FEROZEPORE TETANUS CASE.

Hospital Assistant Maya Dass's evidence :—

"I recollect the case of a woman inoculated by Captain Perry and who afterwards died at 4 A.M. on the 22nd. I saw the woman. I think she died of tetanus. She had occasional cramp and her teeth were continuously closed. I could not put my fingers in. She had a temperature of 102°. She drank nothing; everything poured inside her lips she rejected.

"I saw her at noon on the 21st. I stayed with her and sent a clerk to get a tub from the bungalow to give her a warm bath; when we got the tub we put her into a warm bath.

"I saw her last at 5 P.M. on the 21st.

"I heard there had been another case six months before in a neighbouring house; the two houses had a common wall.

"I have seen tetanus at the Medical College. I am sure this was the same disease.

"There was nothing wrong with the arm, and I could not see the needle puncture.

"I made no examination of her person.

"I have seen two cases of tetanus.

"She was inoculated before 2 o'clock on the 19th. The relatives said she exhibited symptoms, *i.e.*, cramp, on the morning of the 20th.

"I saw her for the first time for an hour. The second time they would not let me examine her.

"The spasms were less when she was taken into a darker room."

II.

The Indian Commission's Report.

I find in this Report and in the Commission's Proceedings the following points to which I believe I am right in taking some exception.

I mention first those to which reference has already been made, *viz.*:—

1. The part of the Malkowal operator's evidence, when he examined before the Commission the Malkowal and other bottles, has been recorded in an abbreviated form, which gives it a bearing I believe to be different from the one it had actually. The matter has been referred to above in the Appendix under (2).

I find less important omissions, but in an essential part of the evidence, in the deposition of Dr. Elliot's compounder. This has been indicated in the text of this letter, in footnotes on page 9.*

(I have seen the above two records of evidence for the first time in the print communicated to me by the India Office)

2. The Commission, when discussing in their Report the fact that the bottle was free from odour at Malkowal, refer, in their argument, to specialisation of a smell instead of to detection of the existence of a smell. It is specialisation that requires, as the Commission say, an experienced person, *i.e.*, one acquainted with the nature of the smell which he is to specialise; and it is again specialisation that is facilitated by the process (fermentation or culture) producing the smell being pure, *i.e.*, unadulterated by the odour of some other concomitant culture But specialisation of an impurity was not and could not be the object at Malkowal. Even in the Laboratory, though provided with trained bacteriologists and the necessary apparatus, on no occasion is the task of specialising an impurity attempted, as that task in bacteriology generally requires days, and sometimes weeks, of investigation, and in many instances cannot be solved at all.

3. In the same discussion the Commission refers to the ordinary ("old" or "standard") carbolized broth prophylactic, in place of the water-agar variety. The first gives out a slight mixed odour of broth and carbolic; the Punjab operators were not dealing with this prophylactic at that time; the other has no odour, and it is with this material that Dr. Elliot was working at Malkowal.

The importance of this *quid pro quo* is apparent from the circumstances that the Commission have based on it their not taking account of one of the most essential facts brought out by their inquiry. They say:—

> "Our personal observation leads . . . to the conclusion that all bottles of prophylactic have a peculiar and not agreeable smell, so that Dr. Elliot, under the circumstances in which he was working, may well have failed to specialise a tetanus smell."

The difference between the two prophylactics was indicated by Dr. Elliot himself in his evidence referred to in the Appendix under (2) above; and he mentioned the absence of any odour in the water-agar prophylactic in further support of his statement that he could not have missed a bottle having an odour of any kind. At the same time he proved before the Commission that he would not have missed a tetanus contaminated bottle even amongst bottles of ordinary, *i.e.*, broth prophylactic.

4. In the passage just quoted the Commission refer to the circumstances under which Dr. Elliot was working; and a few lines higher up they say that the smell may no doubt be detected by one on the alert.

This may possibly suggest that there was something in the circumstances to prevent Dr. Elliot from detecting the smell, and that he was perhaps not on the alert; or that without being specially on the alert the smell given out by a tetanus culture cannot be felt.

* Page 2637 of this Supplement.

But every detail on record indicates an opposite condition of affairs. I beg to refer to the evidence quoted in the Appendix under (2) above.

I mention now the points to which I have not yet had an occasion of referring, and begin with a passage which attaches to the matter just treated.

5. The Commission say :—

> "The failure to perceive a smell is undoubtedly a fact that calls for consideration, but we do not regard it as so conclusive in favour of tetanus having been introduced at Malkowal as to outweigh all other considerations."

It must be noted that—

(*a*) A fact, the result of direct examination, would have to be outweighed by considerations; it is, indeed, an *à priori* thesis that the Commission opposes, lower down, to the facts brought out by the investigation.

(*b*) The result of the examination in question, *i.e.*, freedom of the bottle from tetanus odour at the time of opening it, has been confirmed by every one of the facts observed and found out subsequently, all of which will have to be rejected before an opposite conclusion is possible; and

(*c*) The Commission speak of "all other considerations" to be outweighed; whereas by this they refer to the only consideration which they adopted *à priori* and which has been negatived in the Lister Institute's declaration of November last.

6. The Commission broke up the facts opposing that consideration into two parts, and dealt with one part of them as being the whole.

I beg to refer to the two broad alternatives between which the Commission divided their discussion on the origin of the Malkowal tetanus.

What they had determined to be the argument on the first alternative (*vide* their text), should, I believe, have ended before the commencement of the following sentence :—

> "There is also the important circumstance that on the examination of the bottle at Kasauli it was found to contain tetanus bacilli; and though not absolutely conclusive on the point, we have always regarded this fact as strongly suggestive of the inference that the contamination was in the fluid."

My contention will be clear from the following. The above sentence, though containing a very definite and clearly expressed idea, obviously lacks verbal completeness; for as it stands it would seem to affirm that the circumstance that the bacilli were found in the fluid was not absolutely conclusive as to their being in the fluid; but that the Commission considered this circumstance as suggestive that the bacilli were in the fluid.

I believe I am right in saying that the Commission only omitted at the end of their sentence the words: "before it had been made use of," or some similar ones, and that they meant to say the following :—

"The fact that the bacilli were found in the bottle was not absolutely conclusive on the point as to when they had entered it, but the Commission have always regarded this fact as strongly suggestive of the inference that they had entered it before the fluid was made use of, *i.e.*, before it was drawn into the syringe."

By adding the missing words the Commission would have found themselves in the necessity of attaching the subject in question to the second portion of their argument; for that subject refers to the *time* when the bottle was contaminated, before its handling at Malkowal or during that handling.

I need, I think, hardly add that the passage quoted contains no explanation as to the reason why the Commission have considered the mere presence of the bacilli in the fluid as suggestive of the time when they had entered it.

Further: The sentence next to the above passage begins thus:—

"We are now confirmed in this view. . . ."

Obviously, not in the view that the bacilli were in the fluid, for these had been seen in it by direct examination, and the matter could not be treated as a view, but, as will be seen directly, the Commission were confirmed in the view that the bacilli were in the bottle before any fluid was drawn from it.

> "We are now confirmed in this view by the experiments set out in Appendix B (bottle no. 4, Experiments 7 and 8) which establish* that, though there were tetanus germs in the ⅓ c. c. of the fluid left in the bottle no. 4, the conditions in it, when thus emptied, did not permit of their growth, and this points to the conclusion that the bacilli found by Lieutenant-Colonel Semple in the Malkowal bottle were the result of a growth that had taken place in the fluid."

This sentence, as it stands, would seem again to affirm that the conditions in the bottle, when almost emptied, did not permit of the bacilli's growth and that this pointed to the conclusion that they were the result of a growth.

The sentence appears to lack at the end of it the words, "before the bottle was emptied." The reference to the time at which tetanus growth had taken place in the fluid transfers again the matter to the second portion of the Commission's argument, the one dealing with the time of the contamination of the bottle.

Similarly, the whole of the remaining text of that first, the ampler, half of the Commission's argument belongs to the second, the shorter, portion. The phraseology appears to me to betray this in the following sentence:—

> "We therefore are unable to accept the argument that the freedom from tetanus of those persons subsequently inoculated shows that the specific contamination could not have entered the syringe, and after full consideration we think that the contamination was in the fluid."

The connection between the two parts of the sentence, bound together by the "and," is not established; and the words "before the latter was drawn into the syringe" must be put at the end of the passage, to make at once clear the meaning of the whole. Moreover, the statement "after full consideration we think that the contamination was in the fluid," when a little while before it was stated that the bacilli had been seen in the fluid, is inexplicable without the omitted words. As the sentence meant not to affirm that the contamination was in the fluid, but that it was there before the fluid was drawn into the syringe, the matter belongs to the second half of the Commission's argument.

It will be seen from the Lister Institute's Report that, whereas the Indian Commission's plan of discussion was, not to refer to the time of contamination only in the first half of their argument, the Institute adopted that plan for the whole of their Report.

The first half of the Commission's argument calls further for the following, mostly technical, remarks:—

7. They say:—

> ". . . . . To deal first with the theory that the needle may have been the seat of the mischief, it is a remarkable circumstance that the contamination should have survived only so long as bottle 53-N was in use, and then have ceased to manifest itself."

The possibility of contamination by a needle has been verified in the Lister Institute's Experiment 2, Appendix G to their Report: a contaminated needle carried tetanus germs down to the 17th consecutive injection (and 18th and 19th to correspond to the Malkowal numbers, have not been tried.) After this, a syringeful of carbolic was drawn into the syringe as was done by Dr. Elliot at

* As is to be seen from the Lister Institute's Report, section 3, Lieutenant-Colonel Semple and the Commission were misled by the result of the experiments in question.—W. M. H.

Malkowal, and no more tetanus germs were got out of that needle. A susceptible animal having the seat of injection bruised or inflamed by a concomitant impurity, or prepared by a chemical reagent, would have taken tetanus after each of the above 17 injections. (*Vide*, indeed, *Vaillard and Rouget's* experiments in the Annales de l'Institut Pasteur, 1902, referred to above in the Appendix, under (1*b*).

8. The Commission say :—

"Then Lieutenant-Colonel Semple has made an experiment in which a similar needle dipped in a tetanus culture, and used immediately afterwards on a guineapig, failed to impart tetanus."

It is not stated, in the description of this experiment, whether the needle was not one sterilized by the hot oil method ; nothing would adhere to such an oiled needle momentarily dipped into a fluid culture. The matter is not essential for the same reason as mentioned on another occasion : there were no fluid cultures of tetanus in the operator's environment, at the moment of fixing the needle on the syringe, to contaminate it in the manner under consideration.

If, in place of that procedure, Lieutenant-Colonel Semple had taken a tetanus contaminated grain of earth and dropped such into the nozzle of the needle at the time of fixing the latter on to the body of the syringe, as might occur with a needle picked up from the ground ; or even if he had proceeded as the Lister Institute did in the experiment quoted above, in which tetanus germs were allowed the time to adhere to the needle (Experiment 2, Appendix G. of their Report), the result would have been greatly different. It must also be pointed out that both Lieutenant-Colonel Semple and the Lister Institute used "pure" cultures of tetanus. Such are never met with in nature. In bottle 53-N Lieutenant-Colonel Semple found a concomitant impurity as was inevitable ; and it is impurities, of which a number have now been pointed out by tetanus investigators, that help this bacillus to take effect. Moreover, as mentioned before, the prophylactic fluid cause in man a very considerable inflammation, and thus creates another "tetanus favouring" circumstance ; whereas the animals experimented upon by Lieutenant-Colonel Semple and the Lister Institute are hardly affected by the prophylactic at all.

9. The Commission say :—

"On this fact has been founded the argument that the freedom from tetanus of those subsequently inoculated is inconsistent with the theory that the specific contamination could ever have entered the syringe."

For adequately treating this matter, the sentence should have been completed by the addition of the words : "in such an amount as would be represented by a tetanus culture in a bottle of prophylactic." In my letter to the Commission's Secretary (Lieutenant-Colonel Semple), dated Bombay, 4th February 1903, I explained as follows : "The objection I mentioned against a tetanus culture having been drawn into the syringe is maintainable in regard to such a large culture as found* by Major Semple. If, on the other hand, contamination was introduced just before the syringe was filled, the amount of it may have been such as to admit of the rinsing of the syringe rendering it innocuous." I stated this in the above letter, as I thought that, in my verbal evidence, I had not presented that consideration with the fulness pertaining to it ; and I further took some pains to render the matter clear by a specially made experiment, and wrote about it to the Commission's Secretary on the 8th of the same month. (*Vide* the India Office print of the Commission's Report, page 9.)†

At the time of my giving evidence and writing these letters, in Bombay, I did not know the real abundance of a tetanus culture which develops in a full bottle of prophylactic. At present it is known that had tetanus been in such a bottle for a few days, the abundance of organisms would have been far above that which Lieutenant-Colonel Semple found in the sample of 53-N when it reached him at Kasauli.

10. The Commission say :—

"The experiments that have been made by Lieutenant-Colonel Semple appended to this Report, show, we think, that the argument is so

* In the Malkowal bottle.—W. M. H.

† Page 2552 of this Supplement.

far well founded, that, where a fluid containing a culture of tetanus is used, the syringe, even after it has been washed out with a 1 in 20 solution of carbolic acid, may retain enough contamination to affect fluid with which it is subsequently filled. The extent, however, of its influence varies according to the richness of the growth between fatal results and absence of all manifestations."

The culture which in Lieutenant-Colonel Semple's experiments gave fatal results (Experiment 2, Appendix B) had been made just in the conditions in which tetanus would have developed in bottle 53-N had the latter been contaminated in Bombay, or even only a few days before the Malkowal operations. It is such a culture that interests us in the present instance, and of which it is desirable to know whether it existed in the bottle at the time of inoculation.

That it did not so exist is indicated by two concrete results which mutually agree and explain each other, *viz.* :—

1. On examining the Malkowal bottle Lieutenant-Colonel Semple found in it no such culture ; and

2. After a mere rinsing of the syringe there was, at Malkowal, absence of all tetanus manifestations, which would have been paradoxical had Lieutenant-Colonel Semple been wrong in his above finding, and had bottle 53-N contained a Bombay infected fluid.

The Commission do not draw these conclusions, and explain as follows :—

There are no means of forming an opinion as to the precise richness of the growth in the bottle 53-N beyond Lieutenant-Colonel Semple's view that it was a poor growth in comparison with that which he used in his Experiments 1 and 2, Appendix B ; and they conclude : "after full consideration we think that the contamination was in the fluid."

In this explanation the Commission assume that the condition of the bottle as to tetanus development was the same when Lieutenant-Colonel Semple saw it as when it was first opened at Malkowal ; for, if not the same, an opinion on the precise richness of the growth found by Lieutenant-Colonel Semple would not advance us, in the present argument, in regard to the Malkowal events. The argument then (even after being completed with the words mentioned on page 53* above) appears affected by a double *petitio principii*. For the assumption that the growth seen by Lieutenant-Colonel Semple had already developed when the fluid was drawn into the Malkowal syringe cannot figure in an argument enquiring whether that growth ever entered the syringe, or ever was in the fluid ; and if it entered the syringe, it is impossible to consider as an unknown, and useless to examine by experiment, the question as to whether it was of a richness to be followed by fatal results or by an absence of all manifestations ; for it is known that none of those inoculated at Malkowal after the rinsing of the syringe suffered.

The assumption which figures in the above argument as a premise is itself founded upon an experiment by Lieutenant-Colonel Semple, as referred to by the Commission higher up. This experiment had not given a full reply on the point, as the Lister Institute has correctly ascertained, and had led the Commission to a premise which even when taken outside the above argument, is unwarranted.

Regarding the whole point, on which I have dwelt perhaps longer than I should have done, the Commission say : "We therefore are unable to accept the argument that the freedom of tetanus of those persons subsequently inoculated shows that the specific contamination could not have entered the syringe."

If the wording of the argument they refer to is completed, as it should have been, by the addition of the words "in such an amount as would be represented by a tetanus culture in a bottle of prophylactic," that argument is to be maintained.

* Page 2650 of this Supplement.

11. In the above reasoning the Commission refer to Lieutenant-Colonel Semple's Experiment 2, Appendix A, and 2, Appendix B, in the first of which the result was absence of all manifestations, and in the second, fatal incidents.

Regarding these experiments it must be remarked that :—

Experiment 2, Appendix A, was evidently only a preliminary one, and very much different, as to its circumstances, from the Malkowal case and from Experiment 2, Appendix B. I refer to the size of the syringe, the time during which the contaminated fluid was left in contact with that instrument, the number of animals on which the syringe was tried, the fluid—sterile broth—which was used, instead of a fluid causing inflammation. Then the syringe was "washed out" with carbolic, which procedure possibly differed from the one used in Experiment 2, Appendix B, and which corresponded to the Malkowal procedure ; and lastly, it is not certain whether the syringe used was not one usually sterilised by the hot oil method, as is practised in the Kasauli Laboratory, or had not its plunger oiled with vaseline ; neither of which conditions obtained in the Malkowal case. Contaminated fluid would not moisten and adhere to an oiled barrel.

Under the conditions in which that experiment was done it is impossible to draw from it conclusions regarding the Malkowal events, or to compare its result with that of Experiment 2, Appendix B, in which the Malkowal conditions were very much more approximated. In other words, the difference in result between these two experiments was prepared by a greater deviation of conditions than merely a difference in the richness of growth. (Even in the matter of growth, not the same strain of germs seems to have served in the two experiments).

It remains thus admissible that even with the poorer growth used in Experiment 2, Appendix A, the result might have been a positive one had the Malkowal conditions been more closely realised.

This experiment, however, lost its importance on account of Experiment 2, Appendix B, having given positive results, and it may only be pointed out again that even in the latter experiment the animals experimented upon differed from man by not getting the inflammation which he gets from the plague prophylactic. Further, for gathering an accurate idea of the state of infection of the syringe, information is wanted as to whether the two animals which escaped, out of the 19, as well as those that developed milder and more tardy symptoms were not injected after the second refilling of the instrument. A detail of lesser importance is that the syringe had not been filled with contaminated fluid twice as was the case in Malkowal. It was, however, left in contact with that fluid for two minutes.

In the second half of the Commission's argument, in addition to the remarks made already, the following is essential :—

12. The Commission mentions as an admissible premise—which they afterwards conclude to be inapplicable to the Malkowal case—that the contamination might have effected an entrance at Malkowal, and say :—

> "Thus, by way of illustration, the stopper or the forceps might have been dropped on the ground and applied to the mouth of the bottle with contamination adhering, or spores settled between the rubber stopper and the rim of the bottle might have dropped in as the stopper was pulled out."

It appears to me gravely prejudicial to the elucidation of the case that the Commission quote the above by way of illustration as a possibility, and omit bringing into line the following actual circumstances, *viz.*:—

That it came out on evidence that the forceps was dropped in opening the Malkowal bottle, notably when that opening was partly done, the operation being then completed with that forceps picked up from the ground ; and that such an occurrence, as well as the dropping of the cork, was a common one in the practice of the compounder who was dealing with the Malkowal fluid.

That the procedure by which danger should have been obviated, *viz.*, sterilizing the instrument in the spirit lamp, was abolished by the rules prescribed to and practised by the operators.

That the contents of the box in which bottle 53-N was carried, was exposed to dust, in the open, on successive occasions since at least the week before the opening of that bottle; that the latter itself was so exposed on the morning of the operation, at the time when a gathering of peasants were crowding around; and that the procedure of burning the dust on the cork and rim was equally abolished in the Punjab *technique* and substituted for by a manipulation which could not prevent danger.

13. The Commission's reasoning contained in the passage beginning with the sentence: "It must be conceded that . . . ." and ending with the sentence: "It is therefore clear, accepting all that this train of thought implies . . . ." will, I think I can venture to say, meet with a chorus of dissension from every bacteriological institution in the world.

Besides what I am bound, I fear, to designate as its intrinsic arbitrariness, it presents this particularity which distinguishes it from all the Commission's preceding mode of reasoning, that while up to that point they were taking for guidance the result of animal experiment, and this not only in principle, but even in degree, in the present instance they for the first time refuse to apply to man a rule which has no exception, whatever susceptible animal or whatever disease be taken, *viz.*, that a dose of ready manufactured toxin hastens the incubation of a disease and the development of fatal issue. On this subject other remarks are to be found in the text of this letter, under C.

14. While in the passage just referred to the Commission refuse to admit the influence of the dose of virus upon the symptoms of disease, in the *à priori* thesis on which they condemn the Laboratory they base themselves on a postulate requiring rigorous equality of dose to correspond to a *certain* similarity of symptoms. On this point further remarks are contained in the Appendix to this letter under (1*a*) and (1*b*).

In concluding the above remarks I do not know whether I need mention again that when I admitted in Bombay, before I could make actual experiments that the stopper of a bottle of prophylactic contaminated with tetanus might come out with a noise, I was mistaken, as I have already explained in the Appendix to this letter under (6). The Commission are therefore right in saying: "To the absence of explosive sound we attribute no importance."

III.

The Lister Institute's Report.

It has been mentioned above that the Indian Commission opposed to the facts brought out by the enquiry, an *à priori* thesis to the effect that contamination entering the fluid at Malkowal could not have affected 19 people in the way it did.

The position of the Lister Institute regarding this premise has been determined by experiments on the following two points:—

1. The first related to the question as to whether it was necessary, in the nature of things, for contamination to have entered the fluid at all; whether it could not have happened, as it used to happen in surgery, that tetanus was conveyed to the patients (and fluid) by a septic instrument, notably the syringe needle.

In my Bombay evidence I dealt with this eventuality as a possible one. Lieutenant-Colonel Semple's Experiment 1, Appendix A, led the Commission to the opposite conclusion. By a slight approximation to probable real circumstances, notably by using not a wet needle, fresh from a momentary dipping into a contaminated fluid, and which the operators were not likely to have had at hand, but one on which contaminated matter had been allowed time to dry, the Lister Institute obtained different results. They ejected with such a needle a syringeful of harmless fluid, in 20 doses of 1 c.c. each, and ascertained that tetanus germs were conveyed down to 17 consecutive ejections, the 18th and 19th not having been tried. After filling the syringe with carbolic lotion and emptying it in the way it was done at Malkowal, at the end of bottle 53-N there occurred what the Indian Commission has referred to as a remarkable circumstance, notably no tetanus germs were further obtained from that needle. (Appendix G to the Lister Institute's Report, Experiment 2.)

It is true that the framer of the report, in summing up the above result, used the following terms:—

"This experiment shows that a seriously contaminated needle (dried) under the test conditions does not give uniform infective results, either before or after the use of the carbolic solution. The infective material tends to disappear at the end of the ejection of the first syringeful and has disappeared after carbolic washing."

But the actual result was there; and it was obvious that the needle used was far from presenting the utmost limits of contamination. Also in the Malkowal circumstances there were conditions aggravating the case of the patients such as were not present in the laboratory experiment. (*Vide* notes on pages 53—55,* under 7 and 8 above.)

Consequently, in accordance with their experiments, *the Indian Commission had pronounced it as established that the tetanus impurity was primarily in the fluid;* whereas the Lister Institute was able to follow them only to the extent of accepting this as a probability.

I must add that when discussing the above matter in Bombay I did not know yet how Dr. Elliot had actually dealt with the needle, nor were the facts subsequently described by the compounder as to his procedure at Malkowal known to me.

2. The other point was the following:—

Contamination, whether it came from the needle, forceps, cork, or other source, was brought in contact with the fluid, and contaminated the latter. When examining the sample left in the bottle, 15 days after Malkowal, Lieutenant-Colonel Semple saw in it a poor growth of tetanus. That growth, when so developed, was sufficient to give the bottle an extremely marked odour.

The facts brought out by the inquiry had indicated that, at the time of using the bottle there was no such growth. Could it have developed since?

* Pages 2650-51 of this Supplement.

In my evidence in Bombay I stated that it could.

Lieutenant-Colonel Semple tested this in his Experiment 7, Appendix B, and concluded that it could not.

The experiments made by the officers of the Lister Institute have amended his result. They saw that the conditions described by Lieutenant-Colonel Semple "did not permit of the growth of a pure culture of tetanus," *i e.*, of a culture which is never met with in nature; but that, "in those cases where it was sown in association with ærobic saprophytic organisms, growth occurred." The Institute accordingly concluded: "We think therefore that Colonel Semple's experiments cannot be held to exclude the possibility of contamination at the time of the opening of the bottle."

The above may be summed up as follows :—

The Indian Commission had divided their discussion on the origin of the Malkowal tetanus into two portions, notably under two alternative heads :—

I. In the first they considered whether contamination had primarily penetrated into the fluid. They concluded that it did; the Lister Institute accepted this only as a probability.

II. In the second half the Commission considered the *time* when contamination penetrated into the fluid, and concluded, on the ground of their *à priori* thesis, that this occurred before the opening at Malkowal. In this the Lister Institute did not follow them. They negatived the Commission's thesis, and abstained from saying anything else.

The Institute's view was conveyed to you, by the writer of their report, in the following words :—

First wording—

"Although of opinion that the evidence points strongly to the infection being in the bottle at the time of the inoculation, we agree with the Commission that it is quite impossible to determine at what stage in its history and in what way bottle 53-N became contaminated."

Second wording—

"The conclusions of the Institute coincide with those of the Commission that in all probability the tetanus was at the time of the inoculation in the fluid contained in the bottle, but that it is impossible to determine at what stage in its history or in what way bottle 53-N became contaminated."

In the first passage, the initial portion, that beginning with the concessive conjunction "although," expresses what was the Institute's limit of agreement with the Commission; and seems to prepare the reader to find in the next portion the dissentient part.

There it actually is. The Commission had reported that the bottle was contaminated prior to its Malkowal opening and indicated three *laboratory* stages between which they thought it impossible to choose, but one of which was, in their opinion, the origin of the mischief.

The writer of the Institute's report, without drawing undue attention to the matter, included the Malkowal handling among the bottle's "stages of history;" and to render the pronouncement less obtrusive, prefaced it with the words "we agree."

In the second passage, which was to go forth as the Institute's conclusion, he transferred the words of agreement from the middle to the top, and embraced both statements, the one in which the Institute disagreed with the Commission in considering the subject matter as a fact, and admitted it only as a probability; and the other, in which they disagreed with the Commission fundamentally.

When the above was published to the world, everyone understood that two scientific bodies, the Indian Commission and the Lister Institute, had found

that tetanus contamination which caused the loss of 19 lives occurred in my Laboratory.

In November last, when the Director of the Institute was asked by you to explain more clearly the Institute's position, he went a step further than the report warranted him. For, on finding, as mentioned above, that the Malkowal accident was possible without contamination having ever reached the fluid, the Institute had abstained from dealing with the question as to *when* that contamination had probably reached it. Had it wished to do so, I presume that it would have proceeded not by speculation, but by examining in detail, and making a clear pronouncement on, the facts which bear on that question.

The Malkowal bottle had been in the Punjab for 26 days, and in possession of the Malkowal operators since at least the week before the accident (*vide* Dr. Elliot's evidence); and as the Director of the Lister Institute has now ventured the surmise that that bottle had probably been contaminated prior to its opening for use, I examined the Institute's report in order to see whether there are indicated in it any circumstances, occurring within a day or two of the accident, and which were more directly conducive to contamination than were the circumstances at the time of using the bottle (*vide* pages 13 * to 19 * above); or else to see whether the Institute negatives the facts indicating that the bottle had been free from tetanus up to a maximum of three days of the accident.

As was indeed likely, nothing is mentioned in the report on the first alternative.

Regarding the second, I find there the following references to the facts in question:—

1 and 2. Those detailed in the text of this letter under B and C on pages 2 † to 5 † above are not mentioned.

3. Regarding the condition of the bottle as examined at Malkowal (Section A, pages 1 ‡ and 2, ‡ and Appendix (2) of this letter), the Institute says:—

> "From consideration of the evidence, and in the light of experiments (*vide* Appendix F), the Institute agrees with the Commission that in all probability the tetanus was at the time of the inoculation in the fluid contained in the bottle; but the fact that a bottle presumably tightly corked (*vide* Dr. Elliot's evidence) should contain enough tetanus growth to destroy 19 people, and yet not be accompanied by sufficient smell to arouse the suspicion of Dr. Elliot, who, according to his evidence, remembers smelling this particular bottle, is difficult to comprehend."

From the Institute's declarations, it is patent that in this passage the word "fact" is put in in place of "suggestion." For the whole matter of inquiry, the question asked of the Institute, was as to whether it was a fact that bottle 53-N contained a "growth" (a culture) at the time of using it; and the Institute declared that it could not be considered as a fact. The first passage of the report contains, therefore, in reality, a refutation of the Indian Commission's pronouncement, but the writer of it mixed up the issues. The corresponding portion of the passage should have been worded approximately as follows: "But the suggestion that it had entered the fluid previously, and that there was a four to seven weeks old growth in the bottle, and yet not be accompanied by a sufficient smell," etc.

Further, whether a bottle may contain enough germs to cause 19 tetanus cases and yet not be accompanied by a smell, is evident from the Indian Commission's Experiment 5, Appendix B; one contaminated "loop," brought in contact with a bottle of prophylactic, gave it enough tetanus for affecting 30 animals; but that bottle most assuredly had not the slightest perceptible vestige of a smell. If "*growth*" had been allowed to take place in that bottle a smell would have rapidly developed, as it developed in bottle 53-N after its handling at Malkowal. At the latter moment bottle 53-N was in an analogous position to that of Lieutenant-Colonel Semple's bottle no. 3, in that there was no smell in it; in accordance with this, no "growth" had taken place in it; yet it contained enough tetanus to affect 19 (in Lieutenant-Colonel Semple's case 30) subjects.

* Pages 2655-56 of this Supplement.
† Pages 2631—34 of this Supplement.
‡ Page 2631 of this Supplement.

Lastly, 4. In connection with the matter considered above under D (page 5*) the report does not defer nor object to the Commission's decisive Experiment 2, Appendix B.

Instead, it makes certain remarks simulating some controversy with me. The remarks are irrelevant. In the experiments regarding the number of germs required to cause tetanus to a guinea pig, the report deals purposely with a culture artificially weakened in its effect on animals, instead of with a microbe of such activity as was found at Malkowal; then the culture is taken in a pure condition which is never encountered in nature; and the animals are not prepared as the men were prepared at Malkowal by the prophylactic inflammation. It is known, since the first discovery of this germ, that tetanus bacilli obtained in an ærobic or imperfect an ærobic culture do not affect animals, or affect them only feebly. In a number of cases an animal appears as an agent more susceptible to an impurity containing a trace of virus than cultivation media are. A guinea pig injected with suspicious sputum reveals in it tubercle bacilli when a culture fails to do so; a rat does the same in regard to mere traces of plague bacilli present in dust; and a guinea pig does the same in regard to the germ of tetanus in a minute grain of earth in which a culture fails to show the presence of a single bacillus, as evident from *Vaillard et Rouget's* experiments quoted several times above.

I abstain from other criticisms to which the text of the Institute's report and of its appendices is open.

Dated Pasteur Institute, Paris, the 10th March 1906.

From—W. M. HAFFKINE, Esq., C.I.E.,

To—The Under Secretary of State for India.

The Government of India's Despatch on the Malkowal tetanus accident, as reproduced in the print which you kindly allowed to be communicated to me, contains no pronouncement on the finding of Sir L. Jenkins's Commission which attributed the origin of tetanus to an operation at the Laboratory, and I venture to express the hope that my letter to you of the 14th ultimo has shown that the accident was not so attributable.

The Government agree in the Commission's finding that none of the other grave occurrences which attended the Punjab inoculations of October 1902 was imputable to the Laboratory; and they also accept their conclusion that the prophylactic used in those operations was not less efficacious, in checking the plague mortality, than the ordinary prophylactic is.

2. In the *communiqué* to the Indian Press issued by the Government in December 1904 it is, however, pointed out that I was open to reproach for having modified, in 1902, on my own authority, the method of preparing the prophylactic; and for having omitted in this process the 0·5 per cent. carbolic acid, which formerly I used to add as an ingredient.

In the lines which follow, notably in sections I and II, I endeavour to explain these points.

I

(*a*) I attach herewith a letter, and forward, under separate cover, a volume, which have reference to the character of the modification employed by me on the occasion in question, and which contain what, I hope, may be considered an authoritative pronouncement on this matter. That pronouncement will, I trust, not appear less impartial and pertinent because it was not intended to figure in the present explanation or in an official correspondence of any kind whatever.

---

* Page 2634 of this Supplement

The letter was written by the late M. Emile Duclaux, Pasteur's successor in the Directorship of the Paris Institute, to a physician doing practice in Paris. It refers to an enquiry, made at the time of the Oporto plague outbreak, as to whether my anti-plague prophylactic was available, in an emergency, at that Institute.

The reply shows that the Pasteur Institute was not prepared to endorse the system of inoculation in force in India as a method for combating the present plague pandemic; and that, had public authorities on their own responsibility asked, as they have since, for my prophylactic, the Institute was able, "in one week," to prepare for them vast supplies of that material. The process of manufacturing which would have permitted so prompt a supply, and which the Institute actually follows at present, is the one which I made use of in meeting the Punjab demand under the very urgent circumstances of the autumn of 1902. That process is to be found described on page 396 of the accompanying volume (*Traité de Technique Microbiologique*, by M. Nicolle and P. Remlinger, 1902), under the heading of "Vaccin Haffkine," where three modifications are cited. The one which has been in use in the Pasteur Institute since shortly after M. Duclaux's above letter, is described as the modification of Roux, the present Director of the Institute. M. Duclaux considered it right to stipulate that the responsibility for the effect of the material should rest with the authorities. This indicates the extent to which he held that preparation, and the prophylactic for which it was to be supplied, as equivalent. M. Duclaux was under a misapprehension in holding that view, as were also various scientific bodies who pronounced on the matter before and after him. The difference in the immunising properties of the two varieties is that which I explained to the Punjab authorities before the commencement of their campaign, and the reality of which was demonstrated for the first time in the course of the latter. (*Report on Plague and Inoculation in the Punjab from 1st October 1902 to 30th September 1903*, by Major E. Wilkinson, I.M.S., Chief Plague Medical Officer, Punjab, Lahore, 1904, page lxxxi.)

Nevertheless M. Duclaux's view and the Pasteur Institute's subsequent action indicate, I believe, that it may be considered to have been within the province of the Laboratory to have acted, in the autumn of 1902, as it actually did, when circumstances suddenly placed it in a position of exceptional difficulty and urgency.

(*b*) Further, since the first production of the plague prophylactic, on the 10th of January 1897, till a year subsequent to the Malkowal case, *i.e.*, till the 23rd October 1903, the Government, with the exception of one occasion, which I shall mention directly, did not ask me about the precise plan I followed in manufacturing the prophylactic, or object to my modifying that plan as I went on, or bind me to any given procedure. I was introducing modifications constantly, one of these being that at a certain period, about the second year of operation, I started employing 0·5 per cent. carbolic acid as an ingredient of that prophylactic. In 1898 I wrote to the Government of India (letter no. 260-A. of the 7th June 1898) dilating upon certain schemes of changes, which subsequently on various occasions were actually made, and which I endeavoured to realise also in meeting the Punjab demand of 1902. The Government did not refer to this matter either then or at any subsequent date, and I was under the impression that they continued their confidence in me as the author of that vaccination process, and left the subject in my jurisdiction. I believe this situation may still be seen in the details recounted to Sir L. Jenkins's Commission by Mr. C. J. Hallifax, I.C.S., and Major Wilkinson, I.M.S., when describing their interview with Sir Denzil Ibbetson and the Sanitary Commissioner before the commencement of the Punjab inoculation campaign.

(*c*) The only officially appointed body to whom I made a description of my method, *i.e.*, of that form of it as was in force at the time, was the "Indian Plague Commission" of 1898-1900, who declared themselves in favour of an alteration of process. The change they thought desirable was in the direction in which I made it as a temporary measure in September 1902, as stated by Lord Curzon in his telegraphic despatch to the Secretary of State of 8th December 1902.

And (*d*) before actually making that change in the autumn of 1902, I mentioned this to Government on two occasions, *viz.*, in my letters of 31st July, two months before the commencement of the Punjab inoculations, and of 11th September 1902.

II

The Punjab Government's investigation, embodied in the Chief Plague Medical Officer's Report on the plague of 1902-03, indicates that close upon 4,000 lives were saved by the prophylactic supplied to them in September—October 1902; and I referred above to the fact that not one instance of evil effect attributable to that fluid has been observed.

The second point which I wish to explain, notably my omitting carbolic acid, must, I believe, first of all, be considered in the light of the fact just referred to. For the material in question was prepared under circumstances of extraordinary difficulty, as I shall have to mention later on. Over 110,000 inoculations were done with it in the Punjab, and some 20,000 in other parts of India. The fact that that fluid was proved to be harmless in such an extensive trial must, I believe, be taken into consideration when estimating to what extent carbolic acid is necessary for producing a safe material.

(*b*) In estimating the possible usefulness of the 0·5 per cent. carbolic acid, it is further essential to take into account that it does not prevent the cultivation in the fluid of a number of harmless germs. The *bacillus megatherium* experimented upon by the Lister Institute (Experiment 3, Appendix B to their Report) is one of such instances. In 1898, during the extensive outbreak of plague in the Southern Maratha Country in India, important saving of life was obtained by means of our ordinary carbolised prophylactic. (*Vide* Mr. E. L. Cappel, I.C.S., and Captain Leumann, I.M.S., report on the plague at Hubli; also Drs. Hornabrook, Foy and Corthorn's reports on the plague at Dharwar and Gadag.) That material could, however, be supplied only in bottles stoppered with ordinary corks, as no others were available in India. The corks permitted the penetration of saprophytic (harmless) germs, which cultivated in 23 per cent. of bottles, notwithstanding the presence of carbolic acid. (*Vide* the Indian Plague Commission's Report, Chapter IV.)

(*c*) Lieutenant-Colonel Semple's, Mr. E. H. Hankin's, and the Lister Institute's experiments went to show that 0·5 per cent. carbolic acid, while not arresting the growth of certain microbes, arrests that of pure (*i.e.*, laboratory-made) tetanus cultures.

The practical bearing of these experiments is, as it happens in most cases, modified by other experiments and by the study of events in nature, which indicate that *growth* is not necessary for the realisation of a multiple tetanus accident; that growth of tetanus microbes may take place in a fluid notwithstanding the presence of 0·5 per cent. carbolic; and that methods quite different from carbolisation are those which ensure protection from mishaps.

Lieutenant-Colonel Semple made an experiment (Appendix B to Sir L. Jenkins's Report, Experiment 3) in which a bottle containing 20 doses of prophylactic was contaminated with a practically unmeasurable trace of tetanus virus. Growth of the latter was suspended by carbolic, and when, six weeks later, he tried the material, he found in it living tetanus germs,* but the effect on animals was *nil*. Lieutenant-Colonel Semple seems to have thought that the animals were not affected, because no growth had taken place in the bottle. (*Vide* his "Remarks" on Experiments 3 and 4.) If so, he did not consider the result of his next day's experiment. (Experiment No. 5.) For in the latter case also no growth took place in the bottle; still, the 20 doses of fluid appeared capable of causing at least 30 tetanus accidents.

* *One* of the two cultures made subsequently from that bottle in Experiment 4 failed. This did not show that the carbolic all but completely destroyed the contamination, as Lieutenant-Colonel Semple says; for such a culture may fail without destruction taking place. *Vide* the eight experiments of the Lister Institute, Appendix E to their Report.

The variation of result in the two experiments was, therefore, not due to prevention of growth; and lay indeed in a phenomenon of a very different nature. That variation would have disappeared had not Lieutenant-Colonel Semple experimented with pure cultures of tetanus which do not exist in nature at all; or else had he approximated in these experiments the conditions which we have to contemplate in the practice of anti-plague inoculation. In the latter circumstances tetanus germs would, notably, be associated with a fluid causing a state of keen inflammation, which it does not cause in guinea pigs.

An analogous demonstration of the truth that growth is not necessary for causing a multiple tetanus accident was made by the Lister Institute in their Experiment 2, Appendix G to their Report, which showed that so small an amount of virus as may adhere to a needle momentarily passed in a virulent fluid, under conditions in which further growth of the virus was arrested by immediate desiccation, was sufficient to carry contamination in 17 consecutive injections.

Lastly, the Malkowal accident itself furnished a demonstration of the same truth.

It was the above state of things which I wished to convey to Sir L. Jenkins's Commission when I told them, in Bombay, that "to cause tetanus, an inappreciable quantity of microbes is required. Dangerous microbes do not float about singly in the air. A particle of dirt is required to contaminate a bottle with dangerous microbes, not a microbe floating in the air. Half per cent. solution of carbolic may tend to check the growth of tetanus, but its practical effect would be *nil*.

(*d*) The documents forwarded to you with my letter of 6th March last* show that the employment of 0·5 per cent. carbolic acid in the anti-diphtheria serum issued from the Milan Bacteriological Institute in 1900 did not prevent the occurrence of a multiple tetanus accident involving some 20 fatal cases.

* 1905.

(*e*) Everything indicates that it is not on antisepsis that we can rely in preparing a safe product, but on asepsis. In other words, the admission of germs into such products must be prevented. For when germs are admitted, we cannot apply sufficiently vigorous antisepsis or sterilisation which, on the one hand, would destroy spore-bearing micro-organisms, and, on the other, leave uninjured the drug, or the patient for whom the latter is intended. Consequently, it will be seen that in none of the processes of manufacturing my prophylactic the description of which is given in the volume above cited, is carbolic acid indicated as an ingredient. In the process described under my name it was not used by me at first, as it is not used now in the two other processes.

In 1892, for the first time in bacteriology, I employed carbolic acid in the preparation of a vaccine, notably of that against cholera. Only one subject in India, Captain (now Lieutenant-Colonel) Manifold, I.M.S., was, in the subsequent year, inoculated with that variety of vaccine; all other operations have been and are till now done with non-carbolised living vaccine. Further, up to this day I am the author of the only two other vaccines in which carbolic acid is, in some laboratories, used, *viz.*, the anti-plague and the anti-typhoid vaccines.

No antiseptics are used in the preparation of the many millions of doses of anti-diphtheritic, anti-streptococcic, anti-tetanic, anti-plague and anti-rabic sera which are prepared and issued at the Pasteur Institute in Paris and in many other institutes throughout the world. These institutes have not registered a single tetanus accident, while the Milan Institute, which used to recur to carbolisation, has, as mentioned, had a multiple accident of that nature.

And lastly, carbolic acid is not only an ineffective, but also an undesirable ingredient in the plague prophylactic. It is therefore probable that it will be definitely eliminated from the preparation of that material.

III

The Government of India's *communiqué* to the Press does not make me responsible for, and contains no allusion to the fact that a certain number of bottles of prophylactic prepared in the Laboratory in September—October 1902 contained harmless (saprophytic) germs; but their Despatch of 18th June 1903 mentions this, and I believe I ought to refer to it in this letter.

The nature of those germs is indicated by the fact that not alone did they not cause a single instance of evil result, but the inoculation reaction produced by the injection of that prophylactic was milder than that produced by the ordinary variety. (*Report on Plague and Inoculation in the Punjab from 1st October 1902 to 30th September 1903*, by Major E. Wilkinson, Chief Plague Medical Officer, paragraph 89, pp. 49-50.) The immunising effect of the material remained also very high. The germs were, therefore, of the kind which are present in every dose of small-pox vaccine lymph, in every drug administered by practitioners hypodermically, and in every particle of food, drink, and air which we consume.

The Government of India are, however, right in thinking that in the case of the plague prophylactic, those germs might, in the ordinary course, be avoided and should have been so avoided; and I strove with all my ability to obtain this.

There are two points from which I desire to consider this matter:—

(*a*) The first is to explain that, though harmful (parasitic or pathogenic) germs are, in nature, always associated with harmless (saprophytic) ones, the opposite is not the case; and that, further, different methods are required for both the avoidance and the elimination of these two categories of germs, so that failure of avoiding "contamination," in the technical sense, *i.e.*, admission of germs, in one case is not an indication that there must have been, or has been, failure in the other.

(*b*) The second point is the following: There exists no spontaneous generation of microbes, and omission of carbolic or of any other ingredient does not generate germs. If these were present in the prophylactic, they had been admitted there; and in proportion in which they were admitted, we were not skilful enough to avoid them. For in ordinary practice, hardly one in many hundreds of bottles or tubes handled is left open to the entrance of saprophytic germs. The admittance of such germs on the occasion in question is explained by the difficult circumstances in which we did our work in the autumn of 1902.

I propose to refer to these two points.

A

There exists a fundamental difference in the methods and manipulations by which harmful and harmless germs are avoided or destroyed. The most accomplished physician or surgeon, unless he be a bacteriologist, does not know how to eliminate harmless microbes; and the most distinguished of the medical advisers to the Government of India are in this position; but most medical men nowadays are skilled in eliminating harmful germs. The difference which underlies this fact is due to the following:

(1) Harmful germs, *i.e.*, those adapted to live in animal tissues, are, when exposed to the vicissitudes of external life, *on the whole*, more easily affected by such agents as heat, light, desiccation, chemical action, than are non-parasitic harmless microbes, which live habitually in, and are adapted to, the circumstances of independent non-parasitic existence. It is for this reason that harmless germs are capable of invading many media which resist the invasion of harmful (pathogenic) ones. A physician may therefore inject hypodermically a number of drugs without "sterilising," or knowing how to "sterilise," them. Every one of those drugs, to which human or animal organism shows itself tolerant, is also accessible to, and harbours, harmless "living germs." Similarly, a surgeon who subjects his instruments to boiling in water before using them

eliminates by this all harmful germs, but leaves a flora of harmless ones which is not affected by the temperature of boiling water. If he subjects those instruments to a higher temperature, but exposes them afterwards, during the operation, to contact with the air, they get again, in a short time, covered with a deposit of harmless microbes.

Similarly, the common processes of cooking are sufficient to eliminate from food germs of cholera, typhoid, dysentery, tubercle, diphtheria, influenza, all of which are capable of affecting man when consumed with alimentary substances; but processes enormously more complicated than those of ordinary cooking would be required if harmless germs were to be eliminated from our food.

(2) The other reason is that harmful germs stick to solid and fluid bodies and are not to be found in the air The latter contains germs, but these are harmless. One may make thousands of trials with microbes obtained from the air without discovering a single one capable of affecting an animal. The oxygen of the air, especially in conjunction with light, rapidly deprives even harmful germs of their pathogenic properties. Now, while it is easy to guard a substance from contact with solid and fluid bodies, it requires accomplished skill to manipulate instruments, vessels, stoppers, stuffs, in such a way as not to "contaminate" them (in the technical sense) with the germs of the air.

Consequently, those who should conclude from the discovery in a medium of harmless microbes to the assumption that that medium had been exposed also to contamination with harmful ones "(the door open to harmless germs is also open to harmful germs") would be mistaken. When a beginner in my presence is bottling a sterile fluid, I can prevent him easily from admitting into the bottle any extraneous solid or fluid bodies and he himself will without difficulty learn to guard against this. By this instruction I shall prevent him effectively from admitting harmful germs; but if he is not sufficiently used to the manipulation and will keep his bottle uncorked a short while longer than is strictly necessary, an exchange of air may take place between that bottle and the surrounding atmosphere, and harmless germs may be invisibly drawn into that bottle. Similarly, when sterilising flasks, syphons or other apparel (*sic*) in a boiler, under compressed steam, all harmless germs will be destroyed in a few minutes from the moment steam is seen to begin to be generated; but if the manometre indicating the exact degree of steam pressure got used up, it will give exaggerated indications, and unless the matter is noticed in time by an experienced worker, the result may be that a certain number of harmless germs capable of resisting the temperature of boiling water will escape destruction.

In the conditions in which the laboratory was placed in the autumn of 1902, our workers, and our vigilance over them, proved to have been sufficient to prepare a fluid which saved a great many lives and to eliminate from that fluid all harmful germs. But our vigilance was not sufficient to eliminate harmless germs.

B

The explanation of our failing to do this is the following: —

In numerous instances, by operations in plague-stricken communities, the efficacy and practicability of my method of combating the plague had been demonstrated, and the Government of India gradually accorded the necessary facilities for my work. My application for assistants was granted; I was allowed to designate the latter and to obtain, when necessary, the change of those offered to me; the choice of the localities best suited for my experiments (Damaon, Mora, Lanowli, Poona, Kirki, Belgaum, etc.) was left to me; and the necessary budget for my work was granted.

These arrangements have never been regulated by formal regulations, but the Government, on various occasions, testified that the use I made of facilities given me was satisfactory. The Governor in India who first observed and dealt with the plague in its present pandemic outbreak was Lord Sandhurst. Under his supervision a large number of methods for combating the invasion was tried on the advice of various scientific commissions who arrived from Europe, and of the

Indian medical and sanitary authorities. I made known to him my disagreement with those methods, and he left me to pursue my line of work. Two years later, during my absence on leave in England, Lord Sandhurst made the first pronouncement on my results, in a speech in Bombay, in which he mentioned the following :—

"Major Bannerman (the officer left in charge) tells me . . . that the discovery of Mr. Haffkine has unquestionably, as all the world now knows, been instrumental in saving an immense number of our fellow subjects in India from death. I may say further that the wares, as I may call them, from the Laboratory at Parel will, no doubt, in a very short time, find their way into southern Europe and into England, and when the time comes for the history of this plague to be really written, it cannot be doubted that the name, from the point of view of science, of Professor Haffkine will occupy the foremost place . . . . Some startling figures have been read to us from Belgaum. I can give you my own personal experience as regards the efficacy of the inoculation. I am sorry to say that among my servants, in their own quarters at Ganeshkind, we have had a number of cases. The exact figures up to date, which it is fair to take, are as follows : there have been 324 inoculated, and 300 uninoculated. A very great many more were inoculated, but so lately that it is not fair to bring them into the calculation. We have been so unfortunate as to have fourteen cases among the servants and their families; every one of those cases has been from among the 300 who were not inoculated." (*The Bombay Plague, compiled under the orders of Government*, by Captain J. K. Condon, I.S.C., Bombay, 1900, page 117.)

Lord Northcote, who succeeded in the Governorship of Bombay, caused it to be written to me by his Private Secretary, on the 11th May 1901, regarding the plague in Poona :—

"Generally speaking, His Excellency is inclined to think that the best policy to pursue this year in Poona will be to make it clear :—

"(1) That Government are satisfied that inoculation is *the* remedy;

"(2) That all measures will be voluntary; and

"(3) That every facility will be given to the people to undergo inoculation."

Sir James Monteath, who acted as Governor on Lord Northcote's retirement, stated in his speech at Satara (*The Times of India*, 30th October 1903):—

"I believe it has been shown that if inoculation were general, at least five out of six deaths from plague would be prevented. I know that it has been feared it may produce various ailments, but no reasonable grounds have been shown for such an apprehension. Even if in a rare case there was ground for suspicion, that through some defect in a particular bottle of the prophylactic or in the means of applying it, evil results had followed, a defect against the recurrence of which naturally the utmost precautions would be taken, surely that is no ground for condemning the whole system, or refusing to adopt a measure which has led to such results. Every effort should be made, both through schools and otherwise, to spread the knowledge of such results, and the means of achieving them."

On the 31st October last, Lord Lamington, the present Governor, stated the result of his studies on this question in his speech in Bombay, as follows :—

"There have been no accidents, except that one sad case of the Malkowal disaster, that can be attributed to the prophylactic that has been manufactured in this Parel Institution...I happened to be in Aden in April last, when a great deal of this inoculation work was going on, and I at that time visited several hospitals. I then learned from Major Prall the great value of inoculation, and I am glad that now the public have been put in possession of the facts . . We have tried disinfection, segregation, turning people out into camps and so on. Almost all these attempts have failed, and, no doubt, at the present time, although we have every reason to believe that the incident of plague is due to a certain flea or a certain species of rat, still there is a great deal to learn in regard to the cause of this malady; and I think Government are right

to have instituted a Commission in order as far as possible to obtain full information as to the life history of plague . . . . The Commission is not established owing to any doubt that inoculation, so far as we can see at the present time, is the only sure preventive and check to this visitation." (*The Times of India*, 1st November 1905.)

The result of Lord Curzon's enquiry into the matter was stated by him in a speech at Poona, on 11th November 1899, in the course of which he said:—

"I say frankly on this occasion, and I do not care how widely my words may be spread, that in my judgment inoculation is by far the wisest system of prophylactics that you can adopt . . . . I say so because, as a thinking human being with the power of using my eyes and ears, I cannot fail to be conscious of its demonstrable effects. . . . That inoculation has saved thousands and thousands of lives which would otherwise have been lost, and gives to the patient more than a reasonable chance of recovery; that in spite of its theoretic conflict with the conservatism of Indian feeling and with the traditions of native medicine, the majority of the most distinguished native medical practitioners in the country are already in its favour, and that more and more converts are being made from the remainder each day; these are propositions it is impossible to dispute . . . . In the interests not of science but of humanity, and for the future welfare of thousands of human lives, let no effort be spared to spread the facts, to inculcate reason, and to win by persuasion that which you cannot extort by force.

"My whole party were inoculated before we left Simla. I have had no cause to regret it, and I cordially commend the example to others placed in a similar position." (*The London Times*, 13th November 1899.)

In 1902 the Punjab was the province of India most severely affected, and the Government in charge decided to adopt this inoculation, the working of which they had tested in the previous years. When I was asked whether I would prepare for them 7,000,000 doses of prophylactic for the next seasonal outbreak, I reckoned on the above spirit of approval and helpfulness on the part of the authorities in accepting to meet that demand.

I made out estimates and calculations of all that was necessary, and informed Lord Northcote, then Governor of Bombay, that the only item which I was unable to obtain by my own efforts, and in getting which I applied to him for help, was the procuring of assistants. There were practically no bacteriologists in India to act as such, and I applied for five European doctors and 37 subordinate operators whom I intended to train for various portions of the work. The prophylactic was prepared by a long and laborious process. The plan involved the preparation of 70,000 doses a day in addition to supplies for the rest of India, and I had to organise for this at least 12 new laboratories like the one then at work. The training of the subordinates required some weeks: and I applied for the Governor's intervention in order to hasten the obtention of the men. Lord Northcote received my appeal in the way I expected, approved of my proposals entirely, and undertook to obtain what was necessary.

You are probably aware of the vicissitudes and ultimate fate of my application, and I omit to dwell on the matter.

The bulk of the workers began to arrive at the Laboratory, and started their training on the 17th October, over a fortnight after the Punjab had begun the inoculation operations; and the 70,000 doses a day, which I was expected to supply, were to be manufactured by trained operators, by a process requiring, in ordinary times, a minimum of two months of preparation, and were to be despatched to that province from the 28th of the month previous.

Up to that time, though I had not had to face before a problem of so difficult a nature, I had never been treated in the way I was on that occasion. This was the reason why, in not getting my assistants, in fact in not getting replies to my letters and telegrams forwarded and transmitted to various officials, I was inaccessible to the thought that there was any ill-will against me or my

laboratory; or that if a spirit of rivalry existed or had suddenly arisen such feelings would be allowed play in face of a problem of such importance as then stood before us, and of a visitation of that magnitude. I ascribed the difficulties to the pre-occupation of the authorities with the approaching durbar at Delhi, and did my utmost to supplement deficiencies and co-operate with those concerned, without, as far as was in my power, burdening any one with the anxieties of my work. Every one since then, in India and England, has been telling me that I was wrong in taking, and sticking to, that view.

The position in which the laboratory was suddenly placed disorganised our work enormously.

In view of the discovery of saprophytic germs in a certain proportion of bottles the Government of India Despatch says: "But if a prophylactic is issued in what is technically described as a contaminated condition, it is impossible either to foretell or to control the nature of the contamination. It may be innocuous, but it may equally well be deadly; and the only possibility of safety lies in complete sterilisation. In these circumstances, it is impossible to ascribe this freedom from disaster to the sufficiency of the precautions adopted to ensure the issue of safe prophylactic."

The vigilance which we exercised over the work at the laboratory can be followed up step by step from my letter to Government of 29th November 1902 giving the history of the bottle, which was announced to us as having been used on the 30th of October at Malkowal. With that enormous mass of material which then was in preparation, and which has not been seen so far in any bacteriological institution in the world, there was not manufactured or issued a drop of fluid whose detailed history could not be, as fully, traced and testified to, at any moment, from end to end.

I refer to the particulars to be found in the letter in question.

The laboratory culture from which the Malkowal bottle had been filled was proved, by the effect of the sister bottles, to have been free from tetanus. It was therefore pointed out that the Malkowal bottle might have been contaminated individually, during the process of its filling. This process was done at the laboratory under a special supervisor working under the superintendent's (Major Bannerman's) direct orders; and in ordinary times I took no part in it. In the autumn of 1902 I watched over this closely; went among the operators, worked with them, supervised and taught them, and brought also the other superior staff to come and work with them. The names of the officers, as well as mine, are to be found signed in the corresponding books against the particular "brews" or cultures which we thus dealt with personally.

Part of the plant required for the extension of the Laboratory and which I was to get from London, Paris, and Berlin, arrived with delay, owing chiefly to the shipping being taken up with the passenger and goods traffic for the Durbar. Notwithstanding this and the non-arrival of workers, we supplied the Punjab with twice as much material as they were able to use up; and I referred already to the fact that by these operations, notably by those alone done in the month of October 1902, several thousands of human lives were saved: and a most searching enquiry has failed to show that there was one dose of fluid contaminated with a disease-producing germ that was issued from the Laboratory.

Before concluding with this explanation it may be desirable to consider for a moment the following point.

Had there been no direct evidence indicating that bottle 53-N used at Malkowal had not been contaminated at the Laboratory, and were the origin of that accident to be judged by probabilities alone, how would the presence of harmless germs in a certain proportion of bottles have weighed in the scale of probabilities?

I have already dwelt on the fact that the origin whence harmful and harmless germs are derived, and the methods by which they are avoided and eliminated, are not the same.

The kind of germs to which the door was left open at the Laboratory is established by the fact that the inoculation reaction from the material in question was throughout a mild one and that in the many tens of thousands of operations

done in the Punjab and in the rest of India there were no accidents caused by the fluid. The vigilance which was exercised at the laboratory by seven experienced officers, and which was directed against the sources of danger, accounts for this result.

On the other hand, the details of the operations as carried out at Malkowal, and which were recapitulated in my letter to you of the 14th ultimo, show that the door was left open there to pathogenic microbes, and that the *technique* followed was directly conducive to dangerous contamination; and the grave accidents which, apart from the Malkowal case, attended the Punjab inoculations of October 1902 and which were proved not to be attributable to the fluid as issued from the laboratory, tend to show that the door was not only left open, but that harmful germs apparently entered through it.

The comparative "probabilities" would thus appear to be in favour of the same conclusion as is indicated by the direct evidence dealt with in my letter to you just quoted.

IV

The Government of India's despatch of 18th June 1903 contains certain technical details based on expert advice.

In some points I hold views divergent from that advice, and think it desirable to submit my explanations at least on three of them.

The first is contained in a passage beginning with the words "Mr. Haffkine's letter of 20th February 1903 forwarded a letter . . . " and ending with the words "to develop into fresh bacteria." It is the passage which includes the sentence "We cannot regard this appeal to the authority of Professor Terni as otherwise than misleading."

The following refers to this matter :—

(1) Bacteria, in their ordinary, vegetating or sprouting form, are killed at a temperature of 53° to 55°C. There are only few exceptional species, which are found in hot water springs and do not come under consideration, that stand a temperature of some 20 degrees higher. On the other hand, when bacteria have formed seed or spores, the latter, as stated above, resist much higher temperatures, and in the case of certain harmless germs the spores are not killed even by the temperature of boiling water (100°C). For their destruction compressed steam sterilisation is necessary.

The passage in question states that three heatings at the temperature necessary to kill bacteria are sufficient to sterilise a medium, *i.e.*, to destroy also the spores.

Unfortunately, this is not the case. Three heatings at the temperature of boiling water are sufficient; whereas when the temperature can be raised only to that which kills bacteria, or even a little higher than that, as is the case with serum (which *coagulates* at over 58°C.), twice as many times repeated heating may be insufficient.

This detail is destructive of the theory of fractional sterilisation explained in the Government of India's despatch. The theory in question was advanced in the early days of bacteriology by the late Professor Tyndall, and is repeated by many bacteriologists up to this time the world over. There is not, however, one bacteriologist who will not repudiate it if he is made to reflect on the following circumstances :—

(*a*) If the object in fractional sterilisation is to kill bacteria, why is the result different if the heating is done to the temperature sufficient for this, on the one hand, and to higher temperatures, on the other?

(*b*) The theory supposes that every spore to be found in a medium sprouts and is transformed into the bacterial form in two days, *i.e.*, in the intervals which elapse between the first and second heating at 100°C. and between the second and third heating; and that this sprouting takes place when the medium cools down to our ordinary room temperature of 16°—20°C. But it is known to every

bacteriologist who has tried to make an analysis of the microbes of the air, water, or soil, that these contain numberless microbes requiring weeks to sprout even when cultivated in the best appropriated media and placed at most favourable temperatures of incubation.

(2) Fractional sterilisation applied to sera consists in heating three times, for three-quarters of an hour each time, at 54°C., at an interval of one day. This is the practice at the Pasteur Institute at Paris and in most other places. If this heating was intended to destroy microbial spores, it should have been continued for about a fortnight, which is neither materially practicable in wholesale preparations, nor would it leave uninjured the properties of the serum. The practice actually in force is so very far from effective sterilisation that its chief object will be described in many laboratories as being that of removing from the serum the property of causing the patients non-bacterial, so-called *serum*, accidents, such as pain in the joints (arthralgia), the breaking out of eruptions and red spots on the skin (erythema, urticaria), etc. . . . It is also believed that heating prevents or reduces subsequent precipitation of a sediment which is otherwise often observed in serum kept in store. The serum laboratories do not possess, therefore, in the heating a method of effectively sterilising their product, not more, however, than is represented by the carbolisation method; the eventuality of germs *growing*, subsequent to the third heating, is not more met by them than it was after our one heating at 70°C.; and that eventuality is eliminated only by asepsis, *i.e.*, by training workers to do the work in such a way as not to admit germs into the product; whereas the Government of India have apparently been advised that when germs are admitted into three bottles, out of four, there exists any method applicable in the case, for eliminating these germs without injuring a delicate fluid like the prophylactic.

The despatch mentions that the "Plague Commission . . . . recommended the re-sterilisation by heat of the prophylactic fluid after the final bottling, as a precaution to be adopted in addition to the primary heating and the subsequent admixture of carbolic acid. But Mr. Haffkine omitted the first heating and the subsequent admixture of carbolic acid."

The Government of India are right in saying that the above was the Indian Plague Commission's idea. The Commission speak of re sterilisation at 60°C.; and the despatch, in accordance with this, brings into line my abandonment of the primary heating. This however was, on the part of the Commission, practically a case of misapprehension. For the primary heating is done for "devitalising" the plague bacillus of the prophylactic, and plays no part in ensuring absence of extraneous germs It is done *before* bottling, after the material is subjected, by one of the superior and highly trained officers, to the so-called purity test. Any brew found to contain an extraneous germ is destroyed. The sterilisation plans (*viz.*, addition of ½ per cent. carbolic before bottling; or heating after bottling) are devised for affecting such germs as may get into the fluid *subsequent* to the primary heating, *i.e.*, during that long period of exposure which is involved in the bottling.

Further, the Indian Plague Commission has indeed recommended heating carbolised material; but up to this day no laboratory in the world has yet resorted to such a procedure, the reason being that carbolic acid exercises an injurious effect on these fluids, and that this effect is exalted by heating.

I quoted the Indian Plague Commission's suggestion merely because it seemed to reflect a certain view on the relative merits of carbolisation and heating, for that suggestion implied—

(1) the admission that carbolisation was not sufficient to ensure sterility; and

(2) the expectation that subsequent heating to 60 ° C. would accomplish what carbolisation had failed to do. Indeed they say, "So far as these experiments (heating the bottled material) go, we may note that their results are favourable to the conclusion that it would be possible by re-sterilisation at a temperature of 60 ° C. to secure that the vaccine should be sent out in a perfectly aseptic condition." The words are underlined by me. The

Commission do not say that they reckoned on the effect of heat on the carbolic acid.

In connection with the same matter the despatch also refers to the following passage in Sir L. Jenkins' Commission's report:—

> "Looking at its essential constituents alone, we think the new prophylactic was not more liable to contamination than the old, but in our opinion the final process of sterilisation as carried out was open to objection; for the heating of the bottle and its subsequent immersion in cold water might result in the entrance of contamination by the loosening of the stopper."

The loosening of the stopper was provided against by a metal collar going round the stopper and the bottom of the bottle. The manipulation of putting on the collar was such as to cause automatically a tightening of the stopper. The operation is a mechanical one and simpler than many other operations carried on by subordinates It did not carry inherent objections, and the Indian Plague Commission, for instance, as has just been seen, recommended sterilisation of bottled prophylactic, which involved that abstract possibility of lossened corks, etc. The many millions of bottles of serum issued from the institutes where such is prepared are also heated by submersion in hot water, and this operation is repeated on three successive days. Such is, *e g.*, the practice at the Pasteur Institute in Paris, where the corks are fastened by capsules instead of collars. The plan followed in 1902 had been in use in the Bombay Laboratory for some time before, the anti-typhoid vaccine prepared by us being sterilised in that way. After the putting on of the collars each bottle was examined by a special supervisor doing no other duty. At the time of packing for despatch each bottle was again examined by another supervisor, the one of the packing department, notably in regard to the condition of the cork, the labels, and the appearance of the fluid. In the special instance of the bottle 53-N used at Malkowal it was stated on evidence that the stopper was so tight that in endeavouring to withdraw it, in the prescribed way, by means of a pair of forceps, the latter slipped and fell on the ground.

Lastly, it is stated in the despatch:—

> "On the other hand, Dr. Surveyor's experiments go to show that the contents of, roughly speaking, three bottles out of four issued from the laboratory were non-sterile."

Dr. Surveyor's experiments were made with consignments sent back from the Punjab after the authorities there had decided not to use the prophylactic in question. Whether it was on account of the latter circumstance that the stores were neglected, I do not know. But the fact is that they reached the laboratory in a condition of ruin In certain instances it was impossible to make out the number of wooden boxes they corresponded to. It was on bottles picked out from this wreckage that Dr. Surveyor made his experiments; and to these goods belonged the samples which Sir L. Jenkins' Commission refer to in discussing the protection to be derived from carbolisation, in the passage in which they say: "The necessity of suspending final judgment on this point was emphasised by an observation by Dr. Surveyor, who deposed that out of six bottles of plague prophylactic recently returned to the laboratory only one was sterile, though they had all been carbolised."

Further, these experiments of Dr. Surveyor's, as well as those of some other officers and my own, were made at a time when the laboratory was still disorganised, and we depended for our appliances on very imperfect assistants.

I believe, therefore, that Sir L. Jenkins' Commission are not wrong when they say in connection with Dr. Surveyor's figures referred to in the Despatch: "The materials on record do not enable us to formulate any precise numerical computation of the amount of non-sterility in the prophylactic as issued."

ACCOMPANIMENT.

Letter by M. Emile Duclaux.

Vic sur Cère,
le 12-9-00.

Croyez, Madame, que si l'Institut Pasteur ne se mêle pas de la fabrication du vaccin Haffkine, ce n'est pour aucune des raisons louches auxquelles vous faites allusion, et que je vous remercie d'avoir écartées d'office · c'est parce que nous nous sommes imposé la loi de ne fabriquer et de ne vendre que ce que nous avons essayé, et dont nous croyons pouvoir répondre.

Si le procédé Haffkine avait une base expérimentale accessible pour nous, nous l'aurions mis à l'étude. Il est tellement plus simple et moins coûteux que celui auquel nous nous sommes arrêtés. Mais on ne peut recueillir des arguments et des raisons en faveur de ce procédé qu'en pays pestiféré et obéissant, et nous ne sommes heureusement pas encore cela en France.

Du reste, si les pouvoirs publics nous demandaient, sous leur responsabilité, des cultures de peste traitées par la méthode d'Haffkine, en huit jours nous pourrions en produire des hectolitres. Mais nous déclinerions toute responsabilité quant à l'emploi et ne mettrions pas notre étiquette sur nos livraisons. Laissez-moi vous dire que, puisque vous avez été Dreyfusarde, vous devez trouver que nous avons raison.

Veuillez me croire, Madame, votre respectueux dévoué.

(Signé) E. DUCLAUX.

Dated the Lister Institute of Preventive Medicine, Chelsea Gardens, Chelsea Bridge Road, London, W.S., the 5th May 1906.

From—Dr. CHARLES J. MARTIN, M.B., D.Sc., F.R.S., Director,
To—The Under Secretary of State for India.

Sir, The Malkowal Plague disaster.

In further reference to your letter R. and S. 409 of the 9th March 1906, I have now the honour, by direction of the Governing Body of the Lister Institute, to submit to you the following observations on the letters from Mr. Haffkine of the 14th February 1906 and the 10th March 1906.

The Governing Body of this Institute think that Mr. Haffkine has ground for his main contention, that the Lister Institute, while of opinion that the probabilities were in favour of the view that the tetanus impurity was primarily in the fluid, did not feel justified in asserting this as a proved fact in view of the possibility of contamination at Malkowal.

The Governing Body regret that in their report of the 24th November 1904, they inadvertently referred to their conclusion as the same as that of the Commission The sentence in the Government Report that gave rise to this idea was, "That it (the contamination) might have effected an entrance at Malkowal cannot be disputed ; thus, by way of illustration, the stopper or the forceps might have been dropped on the ground and applied to the mouth of the bottle with contamination adhering, or spores settled between the rubber stopper and the rim of the bottle, might have dropped in as the stopper was pulled out." The Governing Body overlooked the fact that the Commissioners subsequently considered this possibility as one cancelled by other considerations. But in this respect the Governing Body are bound to say that they cannot fully concur, and while holding to their view of the probability, they think Mr. Haffkine has a right to claim the benefit of the doubt, especially in view of the fact elicited that the forceps used for drawing the cork at Malkowal were dropped on the ground, and subsequently re-used by the operator on the same cork.

The Governing Body also regret that in the first paragraph of the section of their report dealing with the probable origin of the tetanus virus (page 3*) to which Mr. Haffkine draws attention in his letter of 14th February (page 31†), the words "the fact" were drafted into the sentence. The words should have been omitted and the sentence should have run, "But that a bottle, presumably tightly corked, should contain enough tetanus growth to destroy 19 people, and yet not be accompanied by sufficient smell to arouse the suspicion of Dr. Elliot, who, according to his evidence. remembers smelling this particular bottle, is difficult to comprehend." Mr. Haffkine is certainly entitled to this correction, though the argument in his favour was already clear from the context.

MODIFICATION OF THE HOME DEPARTMENT RESOLUTION NOS. 1304--1311, DATED THE 9TH NOVEMBER 1906, REGARDING THE ALLOTMENT OF MEMBERS OF THE INDIAN CIVIL SERVICE APPOINTED TO THE BENGAL PRESIDENCY IN 1906.

Nos 1402—1406.

RESOLUTION

Calcutta, the 30th November 1906

In modification of paragraph 2 of the Home Department Resolution nos 1304—1311, dated the 9th November 1906, regarding the allotment of members of the Indian Civil Service appointed to the Bengal Presidency in 1906, the Governor General in Council is pleased to direct that Mr J Johnston, who has been posted to Bengal, shall be posted to Eastern Bengal and Assam, and that Mr. H D G Law, who has been posted to Eastern Bengal and Assam, shall be posted to Bengal

ORDER— Ordered that a copy of this Resolution be forwarded to the Governments of Bengal and Eastern Bengal and Assam for information; that a copy be forwarded to each of the gentlemen named above; and that the Resolution be published in the Supplement to the *Gazette of India*

H H RISLEY,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Rainfall Summary for the seven days ending at 8 hrs., on Thursday, the 29th November 1906, based on the Indian Daily Weather Reports of the period.

During the past week no rain was reported, except from Quetta, the Bay Islands and parts of the Peninsula. The rain in the Peninsula occurred chiefly in the south but on the first three days of the week a few isolated falls also were reported from the Deccan. A low pressure area appeared over the south of the Bay on the 28th, and rain was moderately heavy next day on the Coromandel coast and in the Bay Islands. Weather was disturbed and rain occurred in Persia on the 26th, 27th and 28th, and on the 29th the disturbance had commenced to affect north-west India, where the barometer was falling and skies were clouding over.

Burma.—The weather was dry, and cloud light, and temperature differed very little from the normal, except in Tenasserim, where during the first part of the week it was warmer than usual. Moderately heavy rain was reported on the 29th from the Bay Islands, in the vicinity of which a low pressure area had appeared.

North-east India and Orissa.—Light cloud occurred on most days in Orissa, and towards the close of the week it extended into Bengal and Assam. Temperature was slightly lower than usual in Orissa and practically normal in north-east India.

The United Provinces, Central India and the Central Provinces.—Light cloud appeared in the Central Provinces on the 25th and extended into Central India and the east of the United Provinces during the next two days, but on the 28th skies cleared over the whole division. Temperature was normal, except in parts of the Central Provinces, where on most days of the week it was slightly low.

North-west India.—A few stations in Sind and Gujarat reported light cloud during the first part of the week, but skies were, on the whole, cloudless in north-west India until the disturbance which first appeared in Persia on the 26th had begun to influence the weather in Baluchistan and the districts on the north-west frontier. Quetta reported a light fall of rain on the 27th, and at the close of the week skies were moderately clouded in Kashmir, the Frontier Province and parts of the Punjab. Temperature was in steady excess throughout the week, but the excess was not so marked in Gujarat and Rajputana as in other parts of north-west India The approach of the disturbance from Persia was accompanied, as is usual, by a further rise of temperature in Baluchistan and the more western districts of the division.

The Peninsula.—Rainfall was fairly general in the south of the Peninsula on the first three days of the week and a few local falls also were reported during this period from the Deccan, but there was practically no rain on the 26th and 27th. With the appearance of the low pressure area in the Bay rainfall re-commenced on the Coromandel coast and by the 29th had begun to extend into the interior Skies were heavily clouded during the week in the south and were clear or only lightly clouded elsewhere Temperature was normal or in excess, except in the south-east, where it was inclined to be low.

The total rainfall of the whole period, from the 4th May to the 29th November, has been normal in nearly all parts of the Indian region In Baluchistan, however, and in Sind, parts of Rajputana and Orissa it has been in defect, and in the West Satpuras and the sub-divisions of Jaipur and Simla it has been in excess.

The following summarises the chief rainfall amounts of the week as reported at 8 hrs., each day :

November 23rd, Nellore 0·96″ and Cuddapah 0·75″
" 24th, Madras 1·43″, Cuddalore 3·74″ and Negapatam 3·10″.
" 25th, Pamban 1·77″, Madura 2·80″ and Kodaikanal 1·46″.
" 29th, Port Blair 2·29″, Slipper Island 1·90″, Negapatam 3·31″ and Trincomalee 5·83″.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Season and Crop Prospects for the week ending Saturday, 24th November 1906.

Burma.—Practically no rain fell anywhere during the week. Reaping of early wet weather paddy has commenced in Bassein and Lower Chindwin and is progressing in most other districts. Reaping of hill side paddy is completed in Tavoy. Reaping of wet weather paddy has commenced in Mergui, Thayetmyo, Pakokku and Upper Chindwin. Ploughing for dry weather paddy has commenced in Kyaukse. Ploughing for and sowing of gram have commenced in Meiktila. Plucking of cotton is approaching completion. Cultivation of miscellaneous island crops continues. The standing crops in Myingyan and in the Pakokku, Yezagyo, Seikpyu, and Myaing townships of Pakokku are fading for want of rain. Late sesamum and millets in parts of the Myinmu and the Chaungu townships of Sagaing have been affected from the same cause. Rain is also wanted in parts of the Northern Shan States and the Chin hills. Considerable damage has been done by insects to tobacco plants in Bassein. The probable outturn of the rice crop in Prome is reported at 8 annas. Prospects of the harvests on the whole continue good. The price of paddy has risen largely in the Southern Shan States and considerably in Minbu and Mandalay; it has fallen largely in Akyab and Pegu; considerably in Kyaukpyu, Pegu, Mergui and Thayetmyo; and slightly in Tharrawaddy and Pakokku; elsewhere it is stationary.

Eastern Bengal and Assam.—The weather is seasonable. There was no rain during the week. Plucking and manufacture of tea continue, the season is coming to a close, the outturn of tea is good in Nowgong, middling in Kamrup, and fair in Darrang. Ploughing for and sowing of mustard, linseed, and pulses; plucking of cotton; and harvesting of winter rice are in progress. Insects are causing damage to the rice crop in parts of Mymensingh, Tippera, Sylhet, and Kamrup Prospects of cotton are unfavourable in the Garo Hills and Khasi and Jaintia Hills and fair elsewhere. Prospects of winter rice and other standing crops are moderate. Prices of common rice:—Manipur 21; Comilla 15⅛; Silchar 10½ to 11; Kohima 10; Bogra 9¾; Noakhali 9½; Dacca 9; Mymensingh $8\frac{13}{16}$; Chittagong, Rangamati, and Sylhet 8½; Barisal 8¼; Tezpur, Nowgong, and Sibsagar 8; Faridpur 6½ to 8, Pabna and Gauhati 7½; Dibrugarh 7¼; Dhubri 7; Rampur Boalia and Malda 6½; Dinajpur 6¼; Jalpaiguri and Aijal 6; Tura 5 to 6; Rangpur 5½; and Shillong 4½ seers per rupee. Prices have risen in four; fallen in eleven; and remained stationary in the remaining districts.

The number of persons receiving gratuitous relief is:—Mymensingh 1, Noakhali 457; and Sylhet 2,573. 26 persons are employed on test works in Dacca and about 80 persons in Tipperah. Prices are daily falling and the condition of the people improving with the new crop coming on the market.

Bengal.—There was no rain in the Province during the week. Sowings of spring crops still continue. Rain is reported to be needed for them in Saran, Champaran, Monghyr, Bhagalpur and Purnea. Harvesting of winter rice has commenced in places. Paddy on high lands has suffered from drought in Purnea. Sugarcane is being pressed in parts of Bihar.

The number of persons receiving gratuitous relief is:—24-Parganas 9,559, Saran 697, Muzaffarpur 4,419, Darbhanga 19,141—total 33,816 The number of persons attending test-works is—Saran 121, Muzaffarpur 234, Darbhanga 14,476—total 14,831. Fodder and water are sufficient. The price of common rice has risen in four and fallen in six districts.

United Provinces.—There was no rain during the week. Harvesting of autumn crops and picking of cotton continue. The outturn of late rice in the Eastern districts is poor. Spring sowings are nearly completed; the young crops are being irrigated and are flourishing and prospects so far are favourable. Some damage has been done by locusts in Meerut, Bulandshahr, and Aligarh. Agricultural stock is generally in good condition. The fodder supply is adequate. Prices are practically stationary.

The weekly report on the scarcity is as follows:—There has been no change in the agricultural conditions in the Gorakhpur district. Prices continue very high. The numbers on relief are:—on works 326, on gratuitous relief 1,035, total 1,361.

Punjab.—No rain. The price of wheat is rising in Hissar and falling in Lyallpur, the fluctuations in the prices of other food grains are very slight. Harvesting of autumn and sowings of spring crops continue. Sugarcane pressing is in progress in Jullundur, Amritsar

and Sialkot. Malarial fever is retarding spring sowings in Mianwali. Poppy sowings are going on in Shahpur. The condition and prospects of the standing crops are good and the outturn of autumn crops is good to average. Locusts are still damaging crops slightly in some districts; locusts in Lyallpur and hoppers in Mianwali have been totally destroyed. Cattle are generally in good condition. Fodder is sufficient. There are no complaints regarding the water-supply.

North-West Frontier Province.—No rain. Rain is generally wanted to complete unirrigated spring sowings which are in progress. The condition of the standing crops is good. Picking of cotton is going on in Bannu; outturn of cotton is average in Bannu and Peshawar and below average elsewhere. Harvesting of autumn crops continues and the probable outturn is fair. The water-supply is sufficient except in the Swabi tahsil; the Kilapani supply is below average, but there has been no irrigation from hill torrents in Dera Ismail Khan. Fodder is scarce in the Kulachi tahsil in Dera Ismail Khan; elsewhere it is sufficient. The condition of cattle is fair in Dera Ismail Khan, elsewhere it is good. Prices are fluctuating. Prices—wheat 15 to 18½; gram 17 $\frac{1}{16}$ to 21½; maize 15 to 26½; and bajra 15 to 23 seers per rupee.

Jammu.—No rain. Prices are fluctuating. Prices—wheat 11 to 21 and maize 12 to 28 seers per rupee. The condition of the standing crops is fair except in the Kishtwar and Ramban tehsils, Mirpur and Udhanpur tehsils. Fodder is sufficient except in Kishtwar and Ramban tehsils, where it is scarce. Spring sowings have commenced.

Kashmir.—The weather is generally bright and is becoming cooler. Prices are almost stationary.

Rajputana.—Harvesting operations continue in some places and also sowings for spring crops. Prospects are favourable. Damage by locusts is reported from Marwar, Mewar, Tonk and Kishangarh. The condition of cattle is generally good. Pasturage or fodder is sufficient. Prices are rising in Mewar, Partabgarh, Shahpura, Bundi and Jaipur; are falling in Kotah; and are steady elsewhere. Prices are still high in some places.

Central India.—No rain. Harvesting and threshing of autumn crops and sowing of spring crops are in progress. The standing crops and the probable outturn are generally fair to good. Agricultural stock and pasturage are good. Prices are high in Gwalior and Baghelkhand; are falling in Indore and Bundelkhand; are rising in part of Malwa; and are steady elsewhere. Opium sowings have commenced.

Central Provinces.—The weather is clear and cool. Autumn harvesting and spring sowings are in full swing and will soon be completed. Germination of spring crops is good but more dew in Akola and a shower in Seoni, Chhindwara, and Nagpur would improve prospects. Cotton picking and cutting of *juar* continue; *tur* has been injured slightly in Wardha and in parts of Chanda and Akola by insects. Prospects generally continue to be favourable. Fodder and water are ample. The price of rice has fallen in Drug where new rice is coming into the market; *juar* has become slightly cheaper in Saugor, and dearer in Nimar and Chanda; elsewhere prices are steady or fluctuate little; they still continue equal to the scarcity rates in Nagpur, Chanda, Balaghat, and Bilaspur.

Bombay.—There was slight rain during the week in parts of Ahmednagar, Poona, Satara, Bijapur, Belgaum, and Kolhapur More rain is needed in parts of the Deccan and Bijapur where spring crops are reported to be withering The standing crops have been slightly damaged by locusts in parts of Karachi, Thar and Parkar and Sholapur; by insects in parts of Sind and Bijapur; by blight in parts of Hyderabad; and are generally in good condition elsewhere. Harvesting and threshing of autumn crops are in progress; spring sowing continues but is retarded in parts of Ahmednagar and Poona for want of sufficient moisture. Cotton picking is progressing in Sukkur, Hyderabad, Thar and Parkar, Ahmedabad, the Deccan, and Kathiawar. The supply of drinking water is sufficient and water for irrigation purposes is adequate except in parts of Nasik, Poona, and Dharwar. Agricultural stock is generally sufficient and is in good condition. The fodder supply is adequate. Prices of food grains are falling. The quantity purchasable per rupee is in the Deccan and the Karnatak 4 to 30 per cent. less than the normal and elsewhere normal to 25 per cent. below normal. Labourers are getting sufficient employment in the fields. The public health is generally good.

Hyderabad.—No rain. Rain is required in one taluka each of the Aurangabad and Parbhani districts. The autumn and early rice harvests continue. The standing crops are fair to good. Late rice sowings continue. Prices.—wheat 8; coarse rice 7½; and *juar* 10½ seers per rupee.

Mysore.—The standing crops are in good condition and are being generally harvested The prospects of the season are good Cattle are healthy. Water and fodder are available.

Coorg—Rainfall 48 cent Picking of cardamom and of coffee continues. Prices of food grains are stationary. Water and fodder are sufficient.

Madras.—Rainfall *nil* in Ganjam, Vizagapatam Agency, and Bellary, good in Tanjore, South Arcot, Chingleput, Madras, North Arcot, Trichinopoly, Nilgiris and Nellore; and light to fair elsewhere Irrigation supplies are sufficient except in parts of the Circars, the Deccan, North Arcot Salem and Madura Ploughing, sowing, weeding, and transplanting are in progress in parts The standing crops are generally fair but some in Tanjore have been damaged by heavy rain and some in parts of Godavari, Kistna and Kurnool, require more rain. Harvests continue with outturn poor to normal and bumper Pasture is sufficient but fodder is scanty in parts of Godavari, Kistna, Anantapur, Salem and Tanjore The condition of cattle is generally good The price of rice is stationary in twelve districts; has fallen in three, and has slightly risen in eight The prices of millets have fluctuated as follows:—*Ragi* is stationary in two districts, has fallen in five, and has slightly risen in fourteen. *Cholam* is stationary in three districts, has fallen in eleven; and has slightly risen in seven *Cumbu* is stationary in four districts, has fallen in five, and has slightly risen in three

The number of persons in receipt of relief during the preceding and present weeks in each Province or State is shown in the following table:—

Name of Province or State.	Preceding week (Revised figures.)			Present week.			Increase or decrease.

FREDERICK NOËL-PATON
Director-General of Commercial Intelligence.

W. L. HARVEY
Secretary to the Government of India

Calcutta, November 30, 1906

No. 8758-8765—56.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

COMMERCE AND TRADE.

Calcutta, the 29th November 1906.

RESOLUTION.

In July 1905, the Right Hon'ble the Secretary of State for India, acting at the instance of certain Flour Millers' Associations in the United Kingdom, asked the Government of India to consider whether any measures could be devised, with the co-operation of the commercial community, for the improvement of the purity of Indian wheat exported to foreign countries by sea. Though this question of the adulteration of Indian wheat had on several previous occasions received the careful consideration of the Government of India, it was decided, in view of the rapidly growing importance of the export trade, to consult the leading Indian Chambers of Commerce on the subject.

2. The Government of India were then disposed to think that the rigid adherence of English buyers to the system of purchase on a fixed basis of refraction was to a great extent responsible for the systematic adulteration—as opposed to the addition of impurities owing to the system of cultivation and the methods of preparation for the market—of wheat before it left India ; and they therefore suggested that considerable improvement might be effected if Home dealers were authoritatively informed that there would be no difficulty in supplying clean wheat on a basis of two per cent. refraction, which would cover the maximum amount of impurities due to natural causes and would preclude deliberate adulteration. The replies received from the Chambers of Commerce were, however, not sufficiently explicit on this point, and it was necessary again to consult them and the local millers in regard to this matter. It appeared to the Government of India that, if the existing system under which the grain is sold was altered, no action on their part would be necessary, and they therefore again proposed, with the object of strengthening the position of a certain section of English buyers who were known to be in favour of procuring cleaner wheat, to state authoritatively that wheat could be regularly supplied from India containing not more than 2 per cent. of impurities. The point specifically referred for opinion was whether this announcement could safely be made.

3. The replies received have been considered, and the Government of India now feel justified in announcing for general information that, if buyers of Indian wheat desire to obtain regular supplies containing not more than 2 per cent. of impurities (that term covering all foreign matter (other than food-grains), the mass of Indian shipments can be made on that basis.

ORDER.—Ordered that a copy of the Resolution be forwarded to the Government of Bombay, Revenue Department / Madras, Revenue Department / Bengal, Revenue Department / the Punjab, Revenue Department / the United Provinces, Revenue Department, for information, in continuation of the correspondence ending with the letter from that Government, No. 7455 / 620 / 985-T. R. / 242 / 1879, dated the 3rd August 1906 / 15th May 1906 / 12th June 1906 / 24th August 1906 / 19th June 1906.

Ordered also that a copy of the Resolution be forwarded to the Department of Revenue and Agriculture / Director General of Commercial Intelligence, for information, in continuation of the endorsement from this Department, Nos. 1967-1968, dated the 16th March 1906

Ordered also that the Resolution be published in the Supplement to the *Gazette of India* for general information.

W. L. HARVEY,

Secretary to the Government of India.

Statement of Approximate Gross Earnings of Indian Railways.

RAILWAY BOARD.

STATEMENT OF APPROXIMATE GROSS EARNINGS OF INDIAN RAILWAYS.

N. B.—As regards the figures in column *Total earnings*, audited figures have been used as far as possible.

Railways.	Average earnings per mile per week. During 2nd-half of 1905.	During official year 1905-06.	Results of working during 2nd-half of year. Mean mileage worked. 1905.	1906.	Total earnings for week ending 18th November 1905.	17th November 1906.	Earnings per mile open for week. 1905.	1906.	Total earnings from 1st July to 18th November 1905.	17th November 1906.	Increase.	Decrease.	Results of working for official year. Total earnings from 1st April to 18th November 1905.	17th November 1906.	Increase.	Decrease.

No. 4870-I.A.—In exercise of the powers conferred by the Indian Stamp Act, 1899 (II of 1899), as applied to the Civil and Military Station of Bangalore by the Notification of the Government of India in the Foreign Department, No. 1159-I.A., dated 5th May 1899, the Governor-General in Council is pleased to make the following rules in supersession of all previous rules on the subject:—

Rules under the Indian Stamp Act, 1899.

CHAPTER I.

PRELIMINARY.

Definition.

1. In these rules the expression "the Act" shall mean the Indian Stamp Act, 1899, as applied to the Civil and Military Station of Bangalore.

Kinds of stamps.

2. (1) There shall be two kinds of stamps for indicating the payment of duty on instruments chargeable with duty under the Act, namely: —

(a) impressed stamps, and

(b) adhesive stamps.

(2) The adhesive stamp or stamps used to denote the duty of one anna and the adhesive stamp used to denote the duty of half an anna shall be those of British manufacture; all other stamps shall be of the same pattern as may from time to time be in use in the territories of Mysore and shall be only such as have been purchased from the Resident's treasury or from a licensed vendor in the Civil and Military Station of Bangalore, appointed under the orders of the Collector.

CHAPTER II.

OF IMPRESSED STAMPS.

Promissory notes and bills of exchange.

3. A promissory note or bill of exchange shall, except as provided by section 11 of the Act and by these rules, be written on paper, on which the necessary stamp has been engraved or embossed.

Other instruments.

4. Every other instrument chargeable with duty shall, except as provided by section 11 of the Act, be written on paper on which the necessary stamp has been engraved or embossed.

Provision where single sheet of paper is insufficient.

5. (1) Where two or more sheets of paper on which stamps are engraved or embossed are used to make up the amount of duty chargeable in respect of any instrument, a portion of such instrument shall be written on each sheet so used.

(2) Where a single sheet of paper is found insufficient to admit of the entire instrument being written on the side of the paper which bears the stamp, so much plain paper may be subjoined thereto as may be necessary for the complete writing of such instrument:

Provided that in every such case the side of the sheet which bears the stamp shall be covered by a substantial part of the instrument before any part of the latter is written on the plain paper joined to such sheet.

"The proper officer."

6. The Collector of the Civil and Military Station of Bangalore is empowered to affix and impress labels, and he shall be deemed to be "the proper officer" for the purposes of the Act and of these rules.

Affixing and impressing of labels by proper officer permissible in certain cases.

7. (1) Labels may be affixed and impressed by the proper officer in the case of any of the instruments mentioned in Appendix A, and of the counterparts thereof.

(2) Labels may likewise be affixed and impressed by the proper officer in the case of any of the instruments mentioned in Appendix B, when written in any European language, and accompanied, if the language is not English, by a translation into English.

Mode of affixing and impressing labels.

8. (1) The proper officer shall, upon any such instrument as is referred to in rule 7 being brought to him before it is executed, and upon application being made to him for that purpose, affix thereto a label or labels of such value as the applicant may desire and pay for, and impress such label or labels by means of a stamping machine, and also stamp or write on the face of the label or labels the date of impressing the same before returning the instrument to the applicant. In the case of instruments written on parchment, the labels shall be further secured by means of metallic eyelets.

(2) On affixing any label or labels under this rule, the proper officer shall, where the duty amounts to rupees five or upwards, write on the face of the label or labels his initials, and where the duty amounts to rupees twenty or upwards, shall also attach his usual signature to the instrument immediately under the label or labels.

Certain instruments to be stamped with impressed labels.

9. Instruments (other than instruments which, under section 11 of the Act, may be stamped with adhesive stamps) executed out of British India or the Civil and Military Station of Bangalore and requiring to be stamped after their receipt in the said Civil and Military Station shall be stamped with the impressed labels.

CHAPTER III.

OF ADHESIVE STAMPS.

Bills of exchange.

10. Bills of exchange payable otherwise than on demand and drawn in sets, when the amount of duty does not exceed one anna for each part of the set, may be stamped with adhesive stamps.

Supply of deficient duty on transfer of share.

11. When any instrument of transfer of shares in a Company or Association is written on a sheet of paper on which the necessary stamp is engraved or embossed, and the value of the stamp so engraved or embossed is subsequently, in consequence of a rise in the market value of such shares, found to fall short of the amount of duty chargeable under article No. 62 (*a*) of Schedule 1 to the Act, one or more adhesive stamps bearing the words "Transfer Stamp, Mysore," as hereinafter prescribed, may be used to make up the amount required.

Adhesive stamp or stamps denoting duty of one anna or half an anna.

12. Except as otherwise provided by these rules, the adhesive stamp or stamps used to denote the duty of one anna shall bear the words "One Anna" or "Half Anna" as the case may be, and the adhesive stamp used to denote the duty of half an anna shall bear the words "Half Anna" and such stamp or stamps may be superscribed either for postage or for revenue or for both postage and revenue.

Special adhesive stamps to be used in certain cases.

13. The following instruments, when stamped with adhesive stamps, shall be stamped in the manner hereinafter prescribed, that is to say :—

(*a*) Transfer of shares of Public Companies and Associations shall be stamped with adhesive stamps bearing the words "Transfer Stamp, Mysore."

(*b*) Notarial acts shall be stamped with adhesive stamps bearing the word "Notarial Stamp, Mysore."

(*c*) Copies of maps or plans certified to be true copies shall be stamped with adhesive court-fee stamps.

CHAPTER IV.

MISCELLANEOUS.

Provision for cases in which improper description of stamp is used.

14. When an instrument bears a stamp of sufficient amount, but of improper description, the Collector may, on payment of the duty with which the same is chargeable, certify by endorsement on the instrument that it is duly stamped :

Provided that if application is made within three months of the execution of the instrument, and the Collector is satisfied that the improper description of stamp was used solely because of the difficulty or inconvenience of procuring one of proper description, he may remit the further payment of duty prescribed in this rule.

Evidence as to circumstances of claim to refund or renewal.

15. The Collector may require any person claiming a refund or renewal under Chapter V of the Act, or his duly authorised agent, to make an oral deposition on oath or affirmation, or to file an affidavit, setting forth the circumstances under which the claim has arisen, and may also, if he thinks fit, call for the evidence of witnesses in support of the statement set forth in any such deposition or affidavit as aforesaid.

Payment of allowances in respect of spoiled or misused stamps or on the renewal of debentures.

When an application is made for the payment, under Chapter V of the Act, of an allowance in respect of a spoiled or misused stamp, or on the renewal of a debenture, and an order is passed by the Collector sanctioning the allowance or calling for further evidence in support of the application, then, if the amount of the allowance or the stamp given in lieu thereof is not taken, or if the further evidence required is not furnished, as the case may be, by the applicant within one year of the date of such order as aforesaid, the application shall be struck off and the spoiled or misused stamp (if any) sent to the Superintendent of Stamps, Mysore, for destruction.

Mode of cancelling original debenture in case under section 55 of Act.

16. Where the Collector makes a refund under section 55 of the Act, he shall cancel the original debenture by writing on or across it the word "Cancelled" and his usual signature with the date thereof.

Rewards.

17. On the conviction of any offender under Chapter VII of the Act, the Collector may grant to any person who appears to him to have contributed thereto, a reward within a limit to be fixed by the Resident in Mysore.

APPENDIX A.

List of instruments referred to in rule 7(i) of the rules.

	Number of Article in Schedule 1 of the Act.
(*a*) Administration bonds	2
(*b*) Affidavits	4

(w) Transfers of the description mentioned in Article 62, clauses (c), (d), and (e), of Schedule 1 of the Act	62 (c), (d) and (e).

No. 4871-*I.B.*—Whereas it is expedient to regulate the use of motor-vehicles in the Cantonment of Secunderabad and the Hyderabad Residency Bazars, the Governor-General in Council, in exercise of the powers conferred by the Indian (Foreign Jurisdiction) Order in Council, 1902, is pleased to make the following law:—

Short title. 1. (1) This Law may be called the Secunderabad Cantonment and the Residency Bazars Motor-vehicles Law, 1906.

Extent. (2) It shall extend to the Cantonment of Secunderabad, inclusive of the area hitherto known as the Contingent Station of Bolarum, and to the Hyderabad Residency Bazars.

Commencement. (3) It shall come into force on the 15th January 1907.

Definitions. 2. (1) "Motor-vehicle" shall include all vehicles propelled by mechanical means on ordinary roads, other than such vehicles or classes of vehicle as the Resident at Hyderabad may, by notification published in *Hyderabad Residency Orders*, exempt.

(2) "Resident" shall mean the Resident at Hyderabad for the time being.

(3) "Registering Authority" shall mean the Cantonment Magistrate of Secunderabad and the Superintendent of the Hyderabad Residency Bazars, or such other officer or officers as the Resident may appoint either by name or by virtue of their office in this behalf.

Reckless driving.

3. Whoever drives a motor-vehicle recklessly or negligently or at a speed or in a manner which is dangerous to the public, having regard to all the circumstances of the case including the nature, condition, and use of the road and to the amount of traffic which actually is at the time, or which might reasonably be expected to be, on the road, may on conviction be punished with fine which may extend to one hundred rupees or, in the case of a second or subsequent conviction, to double the amount of fine.

Duty to stop in case of accident.

4. (1) Where any accident occurs to any person, whether on foot, on horseback, or in a vehicle, or to any horse or vehicle in charge of any person, or to any property, owing to the presence of a motor-vehicle on the road, whoever is in charge of such motor-vehicle shall stop and, if required, give his name and address and also the name and address of the owner of such motor-vehicle.

(2) Any voluntary breach of sub-section (1) may on conviction be punished with fine which may extend to one hundred rupees or in the case of a second or subsequent conviction to double the amount of fine. This punishment will be in addition to any other punishment to which such person may be liable under any other section of this Law or of any other law for the time being in force.

Driving without license.

5. (1) Whoever drives a motor-vehicle without a license granted for the purpose under sub-section (2) or under any enactment other than this law in force for the time being in any part of British India or in the Hyderabad State or employs to drive a motor-vehicle any person who is not licensed may on conviction be punished with fine which may extend to fifty rupees or in the case of a second or subsequent conviction to double the amount of fine.

Grant of license.

(2) A license to drive a motor-vehicle shall in the places to which this Law applies be granted by the Registering Authority to any person over the age of eighteen years applying for it who is not physically disqualified or disqualified under section 9, and who has satisfied the Registering Authority that he has gained efficiency in driving a motor-vehicle, on payment of a fee of two rupees and the decision of the Registering Authority on this point shall be final.

Payment of fees to the Local Funds.

(3) The Registering Authority shall from time to time, and in each case within a month of the time when such fees are collected, pay to the credit of the Cantonment Fund in the Cantonment of Secunderabad or to the credit of the Residency Bazar Fund in the Hyderabad Residency Bazars as the case may be, the amount of the fees received by him for licenses granted by him under sub-section (2).

Duration and renewal of license.

6. (1) Every license shall remain in force for a period of twelve months from the 1st January of each year, but shall be renewable and the same provisions shall apply to the renewal of the license as apply to the grant thereof.

Period of registration.

(2) The year of registration shall commence on the 1st day of January of each year, and every registration made on any date within such year of registration shall be in force to the end thereof and no longer.

Production of license.

7. The driver of a motor-vehicle shall produce his licens upon demand by any Police officer above the rank of constable.

License not transferable.

8. The holder of a license shall not lend it to, nor allow it to be used by, any other person.

Suspension and disqualification.

9. (1) Any Court by which any person is convicted of an offence under this Law, or of any offence in connection with the driving of a motor-vehicle,

(a) Where the person convicted holds a license to drive a motor-vehicle granted under section 5, sub-section (2), or under any enactment other than this law in force for the time being in any part of British India or in the Hyderabad State,

(i) may suspend such license for such time as it thinks fit and may also declare such person disqualified for obtaining a license for such further time after the expiration thereof as the Court thinks fit, and

(ii) shall cause particulars of the conviction and of any order of the Court made under this clause to be endorsed upon such license and shall also cause a copy of these particulars to be sent to the authority by which such license has been granted, and

(*b*) where the person convicted does not hold such a license, may declare him disqualified for obtaining a license for such time as the Court thinks fit.

Production of license for endorsement.

(*2*) Any person so convicted shall, if he holds such a license, produce it for endorsement within such period as the Court thinks fit to direct.

Effect of order under sub-section (1).

(*3*) A license suspended under sub-clause (i) of clause (*a*) of sub-section (1) shall during the period of suspension be of no effect and a person whose license is so suspended, or who is declared, under sub-clause (i) of clause (*a*), or under clause (*b*), of sub-section (1), to be disqualified for obtaining a license, shall during the period of suspension or disqualification be disqualified for obtaining a license.

Application by disqualified person.

(*4*) No person who is disqualified for obtaining a license, shall apply for, or obtain, a license, and no person whose license has been endorsed shall apply for, or obtain, a license without giving particulars of the endorsement; and any license held by a person who is so disqualified shall during the period of disqualification be of no effect.

Power of Resident to prohibit letting or plying for hire except under permit.

10. (*1*) The Resident may, by notification published in the *Hyderabad Residency Orders*, prohibit within any area or along any road specified in such notification the letting or plying for hire of any motor-vehicle, except under a permit granted by the Resident or by such officer, if any, as he may appoint in this behalf, subject to such general or special conditions as the Resident or such officer may see fit to prescribe.

(*2*) The grant of any such permit shall be at the absolute discretion of the Resident or of such officer, subject to the control of the Resident:

Provided that the grant of a permit under sub-section (1) shall not in any way hinder or restrict the grant of another permit to any other person.

Power of Resident to make rules.

11. (*1*) The Resident may from time to time make rules for the regulation and control of motor-vehicles within the limits to which this law is made applicable or make from time to time such alterations in the rules as he from time to time may deem expedient.

(*2*) Every rule made under this section shall when published by the Resident in such manner as he may from time to time prescribe, have the force of law.

What rules may provide for.

12. In particular and without prejudice to the generality of the foregoing power the Resident may make rules under the foregoing section containing directions as to all or any of the following matters, *namely*:—

(*a*) the speed at which motor-vehicles may be driven,

(*b*) prescribing the form of application under section 5, sub-section (2) and the form of license to be granted under that sub-section,

(*c*) the displaying of numbers or names on motor-vehicles and the registration thereof,

(*d*) prohibiting the driving of motor-vehicles on footways, roads, streets, or other places where their use may be attended with danger to the public, or regulating the hours within which motor-vehicles may be driven, or the hours within which no vehicle other than a motor-vehicle may be driven on any such footway, road, street, or other place,

(*e*) the carrying and use of a horn, bell, or other instrument on motor-vehicles for giving audible and sufficient warning of their approach or position,

(*f*) the carrying of lights on motor-vehicles between sunset and sunrise and the description of such lights and the position in which they should be placed,

(*g*) the stoppage of motor-vehicles when required by the police for the regulation of traffic or for other reasonable purpose, and

(*h*) generally the prevention of danger or injury to persons, animals, vehicles, or property and the prevention of obstruction to traffic.

Local Authorities to post notices.

13. The Superintendent of the Hyderabad Residency Bazars and the Secunderabad Cantonment Authority within their respective areas:

(*a*) shall for the purpose of giving effect to any rule of local application made under section 12, clause (*a*) or (*d*) post notices in conspicuous places on or near the footway, road, street, or in or near the place to which such rule refers, and

(*b*) may erect sign-posts denoting dangerous corners, cross-roads, and precipitous places where sign-posts appear to them to be necessary.

Breach of section or rule.

14. Any breach of section 7 or section 8 or sub-section (2) or (4) of section 9 or of any rule made under section 11 may on conviction be punished with fine which may extend to fifty rupees or in the case of a second or subsequent conviction to double the amount.

Arrest of offender without warrant

15 (1) Any police officer may, without an order from a magistrate and without a warrant, arrest any person committing in his view a breach of section 7, or section 8 or sub-section 2 or 4 of section 9, or of any rule made under section 11, if the name and residence of such person be unknown to such officer and cannot be ascertained by him then and there

(2) When any such arrest has been made, the provisions of section 57, sub-sections (2) and (3), and sections 60 to 63 of the Code of Criminal Procedure, 1898 shall apply

Breach of prohibition made or condition of permit granted under section 10

16 Any breach of any prohibition made, or of any condition of any permit granted under section 10, sub-section (1) may on conviction be punished with fine which may extend to two hundred and fifty rupees or in the case of a second or subsequent conviction to five hundred rupees

Offences by whom triable

17 Offences under this Law shall be triable by the District Magistrate or by any Magistrate of the first Class within whose jurisdiction any such offence may have been committed

Saving of liability

18 Nothing in this Law shall affect any liability whatever, whether civil or criminal, of the driver or owner of a motor-vehicle arising from any other enactment or otherwise

No. 4641-E. C.—The following notification which was published on page 7109 of the *London Gazette* for October 23 1906, is re-published for general information

Foreign Office,
October 20, 1906.

A Despatch has been received from His Majesty's Ambassador at Tokio enclosing an official translation of the Regulations and Supplementary Rules for the control of residents in Kwantung, issued by the Government of Kwantung

The translation is as follows —

REGULATIONS

ART 1.—The term "Residents" in the present Regulations signifies persons who visit or reside in Kwantung

ART. 2.—Any person who establishes his residence in Kwantung shall report the fact, within five days to the Civil Administration Office or its Branch office concerned, stating his name, domicile (or nationality in the case of a foreigner) status, calling age and whether he is the head or a member, inmate or employé of a family, as well as the locality of his residence. A similar notice shall be given when any person has changed his residence.

The aforesaid notice shall be made in the case of a member or inmate of a family or household and in the case of an employé by his employer

ART 3—Foreigners (excepting Chinese) shall be permitted until further notice to reside and lease or own real property only within the town limits of Tairen and Port Arthur

ART 4.—When a birth or death or change in residence or other matters relating to family register or in matters whereof notice is required to be made occurs in the family or household of a resident notice shall be given within five days to the Civil Administration Office or its Branch Office concerned, by the head or a member of such family or household

ART, 5—If any resident is deemed likely to injure public tranquillity or morals, the Chief of the Civil Administration Office concerned may prohibit his residence within the jurisdiction limits of the Government of Kwantung for a period of more than one year and not exceeding three years

ART. 6—Any person who has been prohibited his residence in Kwantung shall leave within five days the jurisdiction limits of the Government of Kwantung If, however, proper reason is found to exist for his inability to leave within the prescribed period, the Chief of the Administration Office concerned may grant him temporary suspension of the prohibition, receiving or not receiving from him a reasonable money security

ART. 7—If any person to whom temporary suspension has been granted as in the preceding Article again behaves within the prescribed period in such a manner as to fall under Art. 5 the suspension granted shall be cancelled and the security confiscated.

ART. 8—If any person who has been prohibited his residence in Kwantung, is found to have remarkably ameliorated his conduct, the Chief of the Civil Administration Office concerned may at any time cancel his prohibition

ART 9.—If any person who has been prohibited his residence in Kwantung has any objection to the prohibition, he may, within three days from the day on which he was so prohibited, apply to the Governor-General through the Chief of the Civil Administration Office concerned for a countermand of the prohibition.

Even in such case the execution of the order of prohibition shall not be suspended,

ART. 10.—Any person who violates Art. 2 or 4 shall be liable to a fine not exceeding thirty *yen* or to detention or a police fine.

ART. 11.—If any person does not leave within the period prescribed for his leaving or within the term of temporary suspension granted him or returns before the prescribed period of prohibition expires, he shall be liable to imprisonment not exceeding six months or to a fine not exceeding two hundred *yen*.

ART. 12.—Necessary rules besides the provisions of the present Regulations shall be established by the Chief of Civil Administration Office.

SUPPLEMENTARY RULES.

In regard to the residence and travel of Russian subjects, rules hitherto obtained shall remain in force for the time being.

The present Regulations shall take effect from the date of publication

The Regulations for the control of vessels sailing to and from Talien Wan and of residents in Kwantung, Military Ordinance issued on the 7th September, 1905, and the Detailed Rules for the Operation of those Regulations, Ordinance No. 1 of the Civil Administration Office of Kwantung, are hereby rescinded.

L. W. DANE,
Secretary to the Government of India.

RAILWAYS.

The 5th December 1906

No. 9555.—In exercise of the powers conferred by Section 135, clause (1) of the Indian Railways Act, 1890 (IX of 1890), the Governor-General in Council is pleased to declare that the Madras Railway Company shall be liable to pay in aid of the funds of the Krishnagiri Union, under the Hosur Taluk Board, in the Salem District, with effect from 1st January 1907, in respect of the railway buildings situated within the limits of the said Union, the house tax for the time being imposed under the provisions of the Madras Local Boards Act, 1884 (Madras Act V of 1884), as amended by Act VI of 1900.

MERCHANT SHIPPING.

The 6th December 1906.

No. 9557—4.—The following Order in Council dated the 22nd October 1906 is published for general information :—

AT THE COURT AT BUCKINGHAM PALACE.

The 22nd day of October, 1906.

PRESENT:

THE KING'S MOST EXCELLENT MAJESTY.

PRIME MINISTER
LORD PRESIDENT
LORD PRIVY SEAL
LORD CHAMBERLAIN
LORD SUFFIELD.

Whereas by "The Merchant Shipping Act, 1894," it is (amongst other things) enacted that where the Legislature of any British Possession provides for the examination of and grant of Certificates of Competency to persons intending to act as Masters, Mates or Engineers on board British ships, and the Board of Trade report to His Majesty that they are satisfied that the examinations are so conducted as to be equally efficient with the examinations for the same purpose in the United Kingdom under the Merchant Shipping Act, 1894, and that the Certificates are granted on such principles as to show the like qualifications and competency as those granted under the said Act and are liable to be forfeited for the like reasons and in the like manner, His Majesty may, by Order in Council—

1. Declare that the said Certificates shall be of the same force as if they had been granted under the said Act;
2. Declare that all or any of the provisions of the said Act which relate to Certificates of Competency granted under that Act shall apply to the Certificates referred to in the said Order;
3. Impose such conditions and make such regulations with respect to the said Certificates and to the use, issue, delivery, cancellation and suspension thereof as His Majesty may think fit, and impose penalties not exceeding fifty pounds for the breach of those conditions and regulations:

And that upon the publication in the *London Gazette* of any such Order in Council as last aforesaid the Order shall, as from the date of the publication or any later date mentioned in the Order, take effect as if it were enacted by Parliament:

And whereas at the coming into operation of the said Merchant Shipping Act, 1894, there were in force the Orders in Council of the 9th day of May 1891 and the 23rd day of November 1893 hereinafter mentioned, being orders in Council made under enactments repealed by the said Merchant Shipping Act, 1894, and it was provided by the said Merchant Shipping Act, 1894, that Orders in Council so made should remain in force as if made or granted under the said Merchant Shipping Act, 1894:

And whereas by the Merchant Shipping Act, 1894, it is further provided that His Majesty may, by Order in Council, revoke, alter or add to any Order in Council made under the Merchant Shipping Acts:

And whereas by the said Order in Council of the 9th day of May 1891, it was declared *inter alia* that Colonial Certificates of Competency granted by certain Authorities therein named and described in the case of the several British Possessions therein mentioned to persons intending to act as therein mentioned on board British ships should be of the same force as if they had been granted under the Acts relating to merchant shipping:

And whereas by the said Order last mentioned the regulations set out in the Schedule A. thereto with respect to the said Colonial Certificates of Competency were imposed and made and it was declared that the regulations set out in the said Schedule A. thereto should apply to all Colonial Certificates of Competency that might theretofore have been or should thereafter be granted:

And whereas by the said Order in Council of the 23rd day of November 1893, it was declared that Colonial Certificates of Competency granted by the Marine Board of Victoria from and after the 21st day of December 1888 as therein mentioned should be of the same force as if they had been granted under the Acts relating to merchant shipping and should be subject to the same conditions and regulations as are set out in Schedule A. to the said Order in Council of the 9th day of May 1891:

And whereas by the provisions of the Navigation (Amendment) Act, 1899, passed by the Legislature of New South Wales and by the provisions of the Shipping and Seamen Act, 1903, passed by the Legislature of New Zealand certain changes were made in the

Authorities authorised by the said Legislatures respectively to grant Colonial Certificates of Competency in those Possessions respectively and other similar changes may be made by the Legislature of the British Possessions referred to in the said Orders in Council with regard to the Authorities authorised to grant such Certificates in such several Possessions:

And whereas it has been made to appear to His Majesty that it is expedient that the said Orders in Council should be so altered as to apply to Certificates of Competency granted by the proper Authority for the time being in the British Possessions mentioned in the said Orders in Council:

Now, therefore, His Majesty, by and with the advice and consent of His Privy Council, is hereby pleased:—

To declare that the Colonial Certificates of Competency granted or to be hereafter granted by the Governor, Lieutenant Governor, Administrator, Head of the Government, Minister, Board, Body or Corporation of or in any British Possession mentioned in the said Orders in Council for the time being authorised by the Legislature or Legislative Authority of such Possession to grant Colonial Certificates of Competency (hereinafter called "the proper authority") from and after the respective dates in the case of the several Possessions with reference to the several kinds of Certificate in the said Orders in Council mentioned shall be of the same force as if they had been granted under the Merchant Shipping Act, 1894, and shall be subject to the same conditions and regulations as are set out in Schedule A. to the said Order in Council of the 9th day of May 1891 and the said Orders in Council shall be read and construed as if the proper authority had been originally mentioned therein in the case of each such Possession in lieu of the Authority in each case actually named and described therein.

A. W. FITZROY.

W. L HARVEY,

Secretary to the Government of India.

ARMY DEPARTMENT.

Fort William, the 7th December 1906.

GAZETTE OF INDIA.

NOTICE.

The 25th October 1906.

From the 10th November next till further notice, the complete *Gazette of India* will be published at Calcutta. After the 3rd November all notifications and other matter intended for publication in the *Gazette* should be addressed to the Publisher, 8, Hastings Street, Calcutta.

Attention is invited to the following Circular Memorandum of the Government of India, Home Department, of August 1901:—

"It has been brought to the notice of this Department that matter for the *Gazette of India* is sometimes sent to the Press late on Friday evenings for publication in the next day's *Gazette*, and that this involves considerable inconvenience to the Press and expense to Government. In the Circular Memorandum of this Department, No. 777—79, dated 9th February 1870, the Government of India directed that all notifications or other matter intended for insertion in the *Gazette of India* should be delivered at the Press not later than 2 P.M. on Friday, and that any papers sent thereafter must be certified to be extremely urgent in order to ensure their appearance in the next day's *Gazette*. The undersigned is directed to request that these orders may be more strictly observed in future, and that Departments will refrain from sending to the Press as extremely urgent any papers which can without harm or inconvenience be held over for the next *Gazette*."

J. P. HEWETT,
Secretary to the Government of India.

The sum of R50 for each of the above inventions.

NOTICES.

All communications relating to applications for leave to file specifications and for registration of designs under the Inventions and Designs Act, 1888 (V of 1888), or in continuation of such applications, should be addressed to the Patents Secretary, 2, Bankshall Street, Calcutta.

The Office of the Secretary under the Inventions and Designs Act, 1888, will in future be open for the transaction of business from 11 A.M. to 3 P.M. on all days, except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Cheques and money orders will only be accepted if made payable *at Calcutta*, to the Secretary under the Inventions and Designs Act.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's Office are now on sale to the public at one anna and eight annas a copy, respectively. A consolidated index for the year 1905, entitled "Inventions and Designs in 1905," is also on sale, price one rupee It contains a chronological list, subject-matter and name indexes of exclusive privileges for inventions, which have been obtained or applied for in that year, together with lists of designs applications.

Attention is requested to the rules made by the Government on the 10th October 1895 in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitors' room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified: or, if the 10th day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

The Inventions and Designs Act (V of 1888), with the notifications and rules issued under its provisions and the notices of the office of Inventions and Designs, to which is added an explanatory memorandum for the guidance of persons applying for protection of Inventions and Designs. Royal 8vo. volumes, paper cover, 13 annas or 1*s.* 1*d.* Postage extra. To be had of the Superintendent, Government Printing, 8, Hastings Street, Calcutta, or of the Superintendent, Patents Branch, Department of Commerce and Industry, 2, Bankshall Street, Calcutta.

H. G. GRAVES,
Secretary under the Inventions and Designs Act, V of 1888

* Agents for sale of the Legislative Department publications.

NOTICE.—Books and Acts required for private use only can be purchased. Applications should be accompanied by a remittance, unless it is wished that the books should be sent by value-payable post, in which case, besides the ordinary postage, an additional charge is made for registration and commission.

Books and Acts required for the public service should be obtained through Local Governments to whom the applicant is subordinate.

Application for Government publications which are no longer in print should be made to the Agen to the particular Government under whose orders they were originally issued.

[The amounts within parentheses are for packing and postage.]

PART III.

Advertisements and Notices by Private Individuals and Corporations.

IN THE COURT OF THE SUBORDINATE JUDGE AT CAWNPORE.

SUIT NO. 286 OF 1905.

(Sections 64 and 68 of the Code of Civil Procedure.)

Shivakaran Das . . . . *Plaintiff*,

versus

Nilmani Ghose and others . . . . *Defendants*.

To Kishtodhan and Bishtodhan, son of Babu Ganesh Chandra, under the guardianship of Mussammat Benarsi Dasi, caste Bengali, residing at Howrah.

Whereas the plaintiff has instituted a suit in this Court against you for R3,000, you are hereby summoned to appear in this Court in person or by a duly authorized pleader of the Court duly instructed and able to answer all material questions relating to the suit, or who shall be accompanied by some other person able to answer all such questions, on the 12th day of December 1906 at 11 o'clock in the forenoon, to answer the above named plaintiff; and as the day fixed for your appearance is appointed for the final disposal of the suit, you must be prepared to produce all your witnesses on that day; and you are hereby required to take notice that, in default of your appearance on that day before mentioned, the suit will be heard and determined in your absence.

Given under my hand and the seal of the Court, this 22nd day November 1906.

GIRDHAREELAL,
Officiating Subordinate Judge.

IN THE COURT OF SARDAR MUHAMMAD KHAN, MUNSIFF, II CLASS, PESHAWAR.

L. MATHRA DAS, of Peshawar . . . . . . *Plaintiff,*

versus

MANGLI PERSHAD and etc. of Cawnpore . . . . . *Defendants.*

Claim for R266-12.

To Mangli Pershad Shiv Pershad of Cawnpore.

The summons in the above suit having not been served upon you and you having absconded, it is hereby given you notice under section 82, Civil Procedure Code, that you should defend the plaintiff's claim on 15th December 1906 either in person or through authorized agent, otherwise the case would proceed *ex parte.*

MUHAMMAD KHAN,
Munsiff, II Class, Peshawar.

Dated 17th November 1906.

IN THE COURT OF THE SUBORDINATE JUDGE AT CAWNPORE.

SUIT NO. 286 OF 1905.

Shivakaran Das . . . . *Plaintiff,*

versus

Nilmani Ghose and others . . . . *Defendants.*

To Mussammat Benarsi Dasi, widow of Ganesh Chandra Ghose Bengali, guardian of Bistodhan and Kistodhan, defendants minor, dwell at Howrah.

Whereas the plaintiff has nominated you as the guardian *ad litem* of the defendants minor quoted above, this is to give you notice that you are to appear before this Court on the 12th day of December 1906 either in person or by a pleader of this Court or agent duly authorized and instructed to show cause why you should not be appointed as such guardian.

Given under my hand and the seal of the Court, this 22nd day of November 1906.

GIRDHAREELAL,
Officiating Subordinate Judge.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Rainfall Summary for the seven days ending at 8 hrs., on Thursday, the 6th December 1906, based on the Indian Daily Weather Reports of the period.

During the first part of the week weather was disturbed in Baluchistan and upper India in consequence of the passage across the south Punjab and north Rajputana of a shallow depression from Persia: light rainfall resulted in Baluchistan and the Frontier Province, and some snow fell in the west Himalayas. On the 3rd there were signs of a fresh disturbance in Persia, and although at the close of the week no definite depression had entered India from the west, the weather had become unsettled, and light snow had fallen in Kashmir. There was very little rain in the south of the Peninsula during the greater part of the week, but showery weather set in on the Coromandel coast on the 5th under the influence of a small depression which formed in the south-west of the Bay and was shown near Ceylon on the morning of the 6th.

Burma.—Skies were more or less thickly clouded, especially in the interior districts, up to the 4th, but were practically cloudless for the last three days of the week. Temperature was in excess in Lower Burma on most days, and normal or in excess in the northern districts.

North-east India and Orissa.—Skies were cloudy on the Orissa coast during the greater part of the week, and on the 6th cloud had extended into north-east India. Temperature was approximately normal, except on the 2nd, 3rd and 4th, when in parts of eastern Bengal it was higher than usual.

The United Provinces, Central India and the Central Provinces.—Skies were clear over the whole division until the 6th, when cloud appeared in Central India and the Central Provinces. Temperature was in more or less general excess on the 4th or 5th: on other

days of the week it was practically normal in the Central Provinces and the east of the United Provinces, and in excess in the west of the United Provinces and in Central India.

North-west India.—A depression from Persia passed through north-west India during the first part of the week, and was the cause of light rain in Baluchistan and the Frontier Province, and of snow in the west Himalayas, and light snow was reported from Kashmir on the 6th. In other parts of north-west India weather was dry and considerably warmer than usual throughout, and skies, except in the extreme north, remained cloudless on mt of the days of the week.

The Peninsula.—Early in the week a few light falls of rain occurred in the south of the Peninsula, but these had almost ceased by the 3rd, and practically no further rain fell till the close of the week : a small depression then appeared near Ceylon and gave moderately heavy rain on the Coromandel coast. Skies were almost clear in the Peninsula, except in the extreme south, until the depression in the south-west of the Bay gave cloud over the whole division. Temperature was in general defect on the 2nd, 3rd and 4th, and normal or in excess on other days of the week.

A new rainfall period begins with the week under review. The amount of rain received was nearly normal in Baluchistan and the south-east of the Peninsula, and below the normal in Malabar.

The following summarises the chief rainfall amount of the week as reported at 8 hrs. each day:

November 30th, Slipper Island 2·77" and Madras 1·01".

December 1st, Peshawar 0·40".

" 2nd, Tinnevelly 1·88".

" 5th, Negapatam 1·59".

" 6th, Sonemarg 0 42", Madras 2·65" and Negapatam 3·57".

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Season and Crop Prospects for the week ending Saturday, 1st December 1906.

Burma.—(Report not received.)

Eastern Bengal and Assam.—The weather is seasonable. There was no rain during the week. Plucking and manufacture of tea continue; the tea season is practically closed; the outturn is good in Sylhet and Nowgong, middling in Kamrup, and fair in Darrang. Ploughing for and sowing of mustard, linseed and pulses; plucking of cotton; and harvesting of winter rice are in progress. Insects are causing damage to the crops in parts of Sylhet and Kamrup. The prospects of cotton are unfavourable in the Garo Hills and Khasi and Jaintia Hills and fair elsewhere. The prospects of winter rice and other standing crops are moderate. Prices of common rice:—Manipur 19; Silchar 10½ to 11, Kohima 10; Comilla 9⅝; Chittagong 9½; Dacca, Bogra and Nowgong 9; Noakhali 8 to 9; Mymensingh 8¾; Barisal 8¾; Tezpur 8¼; Sylhet, Gauhati, and Sibsagar 8; Faridpur 6½ to 8; Rangamati, Pabna, and Dibrugarh 7½; Dinajpur 7; Rampur Boalia 6¾; Dhubri 6½; Tura 5 to 6¼; Jalpaiguri, Malda, Shillong, and Aijal 6; and Rangpur 5½ seers per rupee. Prices have risen in seven; fallen in twelve; and remained stationary in the remaining districts. Nine persons are employed on test works in Dacca and 1,253 persons received gratuitous relief in Sylhet. Prices are daily falling and the condition of people is improving with the new crop coming on the market.

Bengal.—No rain has fallen during the week in the Province. Harvesting of paddy continues. Sowings of spring crops are reported to be approaching completion in Bihar. Rain is needed for these crops in parts of Champaran and Purnea. Damage is being done to the young poppy crop by caterpillars in some places in Muzaffarpur. The number of persons now receiving gratuitous relief as given in district returns is:—24-Parganas 1,251, Saran, 112, Muzaffarpur 3,263, Darbhanga 18,719—total 23,345. The number of persons attending test-works is—Muzaffarpur 55, and Darbhanga 15,343. The price of common rice has risen in one district only and has fallen in fourteen districts.

United Provinces.—There was no rain during the week; rain is needed in Bareilly Badaun and Gonda for spring crops. Harvesting is nearing completion and threshing is in progress. Cotton is being picked and irrigation is being carried on. The condition of cattle is good except in a few villages in Kheri, Partabgarh, and Basti. Fodder is reported scarce in Rae Bareli. Prospects continue favourable and prices show slight change.

The weekly report on the scarcity is as follows:—Agricultural conditions in the Gorakhpur District are practically unchanged. Harvesting of late rice is in progress in all tahsils except Gorakhpur and Bansgaon. Food supplies and fodder are sufficient. Prices remain very high. The numbers on relief are:— on works 470, on gratuitous relief 1,133, total 1,603.

Punjab.—Slight rainfall has occurred in parts of Mianwali. Prices are rising in Hissar, Gurgaon, and Rawalpindi and falling in Sialkot and Shahpur. Harvesting of autumn and sowings of spring crops continue. Sugarcane pressing is in progress in Rohtak, Jullundur, Amritsar and Sialkot. Poppy is being sown in Shahpur. Malarial fever is retarding spring sowings in Mianwali. The condition and prospects of the standing crops are good; the outturn of autumn crops is good to average except that of cotton. Locusts are still damaging crops in Gurgaon, Shahpur, Mianwali, and Multan and have appeared in parts of Lyallpur but did no damage. Cattle are generally in good condition. Fodder is sufficient. There are no complaints regarding the water-supply.

North-West Frontier Province.—Slight rain averaging from 1 cent to 39 cents fell all over the province and was beneficial to the standing crops; more rain is wanted to complete the unirrigated spring sowings which are in progress. The weather is cloudy. The condition of the standing crops on irrigated and unirrigated areas is good. The outturn of cotton is average in Bannu and Peshawar and below average elsewhere. Harvest prospects and the probable outturn of autumn crops are fair. The water-supply is sufficient except in the Swabi Tahsil; the Kilapani supply is below average in Dera Ismail Khan. Fodder is procurable except in the Kullachi tehsil in the Dera Ismail Khan District. The condition of cattle is average in Dera Ismail Khan and elsewhere good. Prices are fluctuating. Prices:—wheat 15 to 18¼; gram 17⅛ to 21½; maize 15 to 25; and bajra 16 to 22½ seers per rupee.

Jammu.—There was very slight rain during the week. Prices are fluctuating. Prices :—wheat 11 to 20 and maize 12 to 32 seers per rupee. The condition of the standing crops is fair except in the Kishtwar and Ramban tehsils where it is bad. Fodder is sufficient except in Kishtwar and Ramban where it is scarce. Spring sowings have commenced in some parts of the province.

Kashmir.—The weather was bright except on the last day of the week when it was cloudy. Cold is increasing. Prices are almost stationary.

Rajputana.—Rainfall :—Jaisalmer five cents. Harvesting operations continue in some places and also sowings and watering for spring crops. Prospects are on the whole favourable. Damage by locusts and insects is reported from Tonk. The condition of cattle is generally good. Pasturage or fodder is sufficient. Prices are rising in Bikaner. Marwar, Mewar, and Kotah ; and are steady elsewhere ; prices are still high in some places.

Central India.—No rain. Harvesting of minor autumn crops and sowing of spring crops are in progress. The standing crops and the probable outturn are good. Crops have been damaged by locusts in the Girapur District of Indore and by cold in the Garot Mahals. Agricultural stock and pasturage are good and sufficient. Prices are high in Gwalior and Bhagelkhand and parts of Malwa; are falling in Bundelkhand ; and are steady elsewhere. Opium sowing is in progress.

Central Provinces.—The weather continues clear and cool. Autumn harvesting and spring sowings are finished in most districts. The standing spring crops are in good condition everywhere, but in parts of Nagpur, Chanda, and Yeotmal the crops have been damaged slightly by insects. Threshing of autumn crops, cotton picking, and cutting of juar are in progress. Prospects are generally good. Fodder and water, are sufficient. The prices of wheat and juar fell slightly in Chhindwara and Bhandara, respectively ; wheat has risen by 4½ seers per rupee in Seoni ; elsewhere prices are steady but the scarcity level is maintained in Wardha, Nagpur, Chanda, Balaghat, and Bilaspur.

Bombay.—There was slight rain during the week in parts of Kolaba, Ahmednagar, Poona, Satara, Belgaum, and Kolhapur. More rain is needed in parts of the Deccan and Bijapur, where spring crops are reported to be withering. There has been slight damage to the standing crops by locusts in parts of Karachi, Larkana, Satara, Cutch, Kathiawar and Thar and Parkar, the crops are generally in good condition elsewhere. Harvesting and threshing of autumn crops are in progress. Spring sowing is nearing completion and cotton picking is progressing in Sukkur, Hyderabad, Thar and Parkar, Ahmedabad, the Deccan, and Kathiawar. The supply of drinking water is sufficient and water for irrigation purposes is adequate except in parts of Nasik and Poona. Agricultural stock is generally sufficient and in good condition The fodder supply is adequate. Prices of food grains are falling. The quantity purchasable per rupee is in the Deccan and Karnatak 2 to 30 per cent less than the normal and elsewhere normal to 25 per cent. There is sufficient employment in the fields.

Hyderabad.—Rainfall 3 cents. Autumn and early rice harvests continue. The standing crops are fair to good. More rain is required for the spring crop. Late rice sowings continue. Prices :—wheat 8 ; coarse rice 7½ ; and juar 16 seers per rupee.

Mysore —The standing crops are in good condition and are being generally harvested. The prospects of the season are good. Cattle are healthy ; water and fodder are available.

Coorg.—Rainfall :—2 cents. Picking of cardamom and coffee continues. The prices of food grains are stationary. Water and fodder are sufficient.

Madras.—Rainfall good in South Arcot, Tanjore, Madura, Tinnevelly, Chingleput, Madras, and Nellore ; *nil* in the Circars except in Guntur, the Deccan except in Cuddapah ; and light to fair elsewhere. Irrigation supplies are sufficient except in parts of the Circars, the Deccan, Nellore, North Arcot, Salem, and Madura. Ploughing, sowing, reaping and transplanting are in progress in parts. The standing crops are generally fair but some in Tanjore have been damaged by heavy rain, and some in parts of Godavari, Kistna, and Kurnool require more rain. Harvests continue with outturn poor to normal and bumper. Pasture is sufficient. Fodder is scanty in parts of Godavari, Kistna, Anantapur, Salem, and Tanjore. The condition of cattle is generally good. The price of rice is stationary in eight districts ; has fallen in nine ; and has slightly risen in six. The prices of millets have fluctuated as follows :—*ragi* is stationary in eight districts ; has fallen in ten ; and has slightly risen in thirty. *Cholam* is stationary in four districts ; has fallen in six ; and has slightly risen in four. *Cumbu* is stationary in four districts ; has fallen in three ; and has slightly risen in eight.

The number of persons in receipt of relief during the preceding and present weeks in each Province or State is shown in the following table:—

JAILS.

REVIEW OF THE PROVINCIAL REPORTS ON THE ADMINISTRATION OF THE PRISON DEPARTMENT DURING THE YEAR 1905.

Nos. 238-249.

Calcutta, the 5th December 1906.

RESOLUTION.

The total number of prisoners, including those under trial, admitted during the year was 464,660 or 6·4 per cent. in excess of the previous year. Appreciable increases occurred in Coorg (72 per cent), Madras (25 per cent), Burma (10 per cent.), and the United Provinces (9 per cent.). There were considerable decreases in Bombay and the Central Provinces, while the transfer of fourteen districts from Bengal to Eastern Bengal and Assam resulted in a large decrease in the former and a corresponding increase in the latter province. In other provinces the variation from the preceding year's figures was unimportant. The daily average number of prisoners rose by about 2 per cent., and showed no remarkable variations.

2. There was an increase in the number of persons convicted and imprisoned during the year of 5·5 per cent. For individual provinces the increase was most marked in Madras (26 per cent.), Burma (12 per cent.) and the United Provinces (3 per cent.). In other provinces the jail population was nearly stationary. In the Madras Presidency and the United Provinces the increase in the number of committals, principally for short terms, was due to more convictions for offences relating to property and is attributed to unfavourable seasons. The Inspector-General of Prisons, Madras, makes a suggestion for modifying the law in favour of first offenders in cases resulting directly from general scarcity of food. The suggestion is not noticed in the local Government's resolution nor do the Government of India consider it to be necessary, as the existing provisions of the law give magistrates the power to deal leniently with first offenders.

The practice of committing persons for a day or two to the Common Prison, Bombay, which was commented on by the local Government last year, is again noticed. These convictions for short periods are said to be due to the more frequent prosecution of beggars, hawkers and prostitutes. The offences punished with imprisonment showed an increase of 13·3 per cent. in offences relating to property and a decrease of 1·7 per cent. in offences against the person. The ratio of offences under the preventive sections of the Criminal Procedure Code was slightly lower than that of the preceding year.

3. The escapes during the year, excluding Coorg for which complete figures are not available, numbered 85 against 76 in the preceding year. Sixty-two were recaptured, in addition to 24 who had broken jail in the preceding ten years. The largest number of escapes occurred in Madras (28) and in Eastern Bengal and Assam (22): the causes assigned being negligence on the part of the warders, the defective structure of the Assam jails, and the large proportion of prisoners employed on extra-mural labour. Only one of the escapes was from an Eastern Bengal jail. In Bombay, too, considerable bodies of prisoners work outside the jails and of the 9 prisoners who escaped in that Presidency 6 were so employed.

4. The Government of India note with satisfaction that there was a slight decrease (1·8 per cent.) in the number of juvenile offenders committed to prison during the year. The fall in numbers was specially noticeable in the case of females (17 per cent.). The percentage of juveniles previously convicted to those admitted to jail, however, was slightly above that of the preceding year

(14 against 13·5 per cent.) the increase in the case of females being more marked (7·2 against 2·5 per cent.) Sufficient notice has not been taken by the magistracy of the remarks of the local Governments regarding the alternative methods of dealing with youthful offenders by committing them to a reformatory or discharging them on their executing a bond to be of good behaviour. In Bombay, although separate accommodation does exist for youthful offenders, there are no means of segregating the first offender from the youthful habitual, with the result that the former can be quite as effectively tutored in voice as if he were permitted to associate with hardened adult offenders. Arrangements were accordingly made during the year under review to draft selected juveniles and young adults to the Dharwar prison where they will be kept separate both from other youthful habituals and from adult prisoners and taught a useful trade on the lines of the system followed in the Borstal prison in England. The Government of Bombay remark that, so far as can be judged at present, the scheme promises to be successful. The Lieutenant-Governor of the Punjab would lay it down as an axiom that, with the exception of youthful offenders whose crimes have been exceptionally heinous or of a nature which would make the offender a probable source of contamination to his fellows, no boy under the age of fifteen should, in future, become acquainted with the inside of a prison Towards securing this end the rules for admission to the Delhi Reformatory have recently been relaxed. The system inaugurated in the Lahore and Montgomery jails in 1904 on the lines of the Borstal prison was continued during the year under review, and the Inspector-General of Prisons regards its ultimate success with hopefulness. Mention may here be made of the experiment started in the Thana Prison in Bombay of selecting a limited number of first-conviction prisoners of approved good behaviour, who have served two-thirds of their sentences, and of forming them into a separate class The object is to supply an additional incentive to good behaviour and to introduce a stronger reforming influence into prison discipline. To attain these ends the selected prisoners are afforded more privileges than fall to the lot of other inmates, such as greater freedom of intercourse between themselves and with their friends, better food and more marks, and liberty to purchase small quantities of tobacco and sweets and to wear ordinary clothes. The separate class is reported to have given no trouble and to have done very good work, and the further result of the experiment will be watched with interest.

5. Over four-fifths (84·5 per cent.) of the prison population consisted of illiterate persons and the proportion scarcely varied from that in the two preceding years. As regards the professions of convicted persons, those engaged in agriculture or in the care of animals formed more than half (53 8 per cent.) of the total number imprisoned during the year, persons classed as miscellaneous were in the proportion of about one-fifth (18 per cent.), and those employed as servants or in performing personal offices amounted to about a tenth (10·2) of the total. These ratios differ very little from those of previous years.

6. There was a rise of 2,637 in the number of previously convicted prisoners, but the increase in proportion to admissions was only 1 per cent. for all provinces. The largest excesses occurred in Bengal (3·96 per cent.), Coorg (2·66 per cent.), Burma (1·73 per cent.) and the United Provinces (1·48 per cent.). in the other provinces the percentage showed only a fractional excess or a small decrease on the previous year's ratios. Deterrent sentences, as indicated by the numbers sentenced to transportation, were not imposed so frequently as in the previous year although the proportion of habituals was larger.

The reports under review show that the subject of segregating casual from habitual offenders continues to receive attention. Every endeavour is made in the Madras jails to carry the principle into practice to its utmost limit: in Bengal, it is possible now in most jails to achieve this object, and the separation of the two classes appears to be very thorough in the United Provinces. Habituals are carefully kept apart from casuals in the barracks in central and district jails, and in all the former and many of the latter jails they are confined in cells or cubicles at night In the Punjab, convicts of the habitual class are segregated as far as the available means permit; and in Burma, proposals for structural alterations to some jails, and other measures to secure the complete segregation of habituals and to make jail life more

irksome to them, are receiving the consideration of the local Government. The employment of habitual prisoners as convict officers in the wards and barracks set apart for prisoners of that class is contrary to the principles laid down by the Government of India in paragraph 18 of the Home Department resolution no. $\frac{10\text{-Jails}}{610\text{-}23}$, dated 9th November 1892. The experiment referred to in paragraph 15 of the Burma Jail report by which habitual convicts are employed in watch and ward in the Insein Central Jail, though under unusually stringent conditions, therefore contravenes the orders cited. A separate communication will be addressed to the Government of Burma on this subject. In most jails in Eastern Bengal and Assam it is found possible to separate habitual prisoners from others by night and cubicles are being provided for this purpose. A standard pattern of cubicles has been decided on in the Central Provinces, but before general adoption a few are being erected experimentally in the Nagpur jail. Habituals are separated from casuals in the jails of the North-West Frontier Province so far as the accommodation will allow.

The prescribed statement regarding the identification of habitual offenders has been furnished by all provinces except the Punjab. Satisfactory progress has been made in this direction in Madras. In Bombay, although a larger number of persons were identified by the police than in the preceding year, no less than 565 were identified after commitment to jail; and numerous identifications after admission to jails were made in Burma and Eastern Bengal and Assam, thus indicating that in those provinces the police failed to detect a considerable number before trial. In the Punjab, only 17 prisoners were identified after admission to jail; this is considered to be due to the more successful efforts of the police in tracing old offenders. But at the same time it is remarked that the classification of habituals is often faultily carried out by committing magistrates, with the result that the attempts of jails officers to separate casual prisoners from habituals are frustrated. The remarks of the Inspector-General have, the Government of India observe, been commended by the local Government to the careful attention of the Chief Court and the police authorities.

7. The number and percentage of offences committed by convicts during the year varied very slightly from those of 1904. As usual, offences relating to work preponderated and formed 55·79 per cent. of the aggregate, showing a small rise on the previous year's ratio, while the number of more serious offences which were dealt with by major punishments showed some decrease. Offences relating to assaults, mutinies, escapes, etc., necessitating major punishments showed an increase of 5·7 per cent. The greatest increase under this head occurred in the Punjab and is attributed principally to the bad character of the convicts confined in the Multan and Montgomery jails and the inadequate means of separating them.

The actual number of punishments showed a trifling increase over the figure for 1904, but was smaller in proportion to the number of prisoners. The greatest apparent decreases were in Madras (43·53 per cent.), Coorg (34·5 per cent.), the Punjab (31 per cent.), and Eastern Bengal and Assam (20·61 per cent.). Increases over the previous year's ratios are shown in Bengal (24·18 per cent.), Bombay (18·53 per cent.), the United Provinces (14·2 per cent.), and the Central Provinces (11·7 per cent.) Prisoners were most frequently punished in Burma and the Punjab and least often in Coorg and Madras. The frequency of punishments in Burma is ascribed to the larger proportion of relapsed criminals in the jails of that province than in those of other provinces. This fact suggests the inference either that sentences for first offences are not sufficiently deterrent in Burma, or that the Burmans are less susceptible than other races to the reforming influences of jail life. In the resolution reviewing the reports for 1904, comment was made on the small proportion of punishments inflicted in the Rawal Pindi jail, having regard to the fact that its population was drawn from the roughest classes and that discipline was well maintained. The explanation adduced in the report for 1905 is of interest. It is to the effect that the medical officer's classification of the prisoners according to the kinds of labour for which they are fitted largely affects the statistics of offences and punishments in a jail, for if prisoners are classed as in indifferent health and fitted for light labour only they are less likely to be

punished for offences connected with work than if set to full tasks. This reasoning is supported by the illustration afforded of the conditions existing in the Rawal Pindi jail and the Jullundur jail which is at the opposite extreme in respect of the ratio of offences to population.

The cases in which the punishment of penal diet, with or without solitary confinement, was awarded increased during the year to 10,954 as compared with 10,578 in the preceding year. The punishments of this kind imposed in Burma formed about two-thirds of the total for all provinces. The Government of India in their remarks on the reports for 1904 deprecated the excessive resort to this form of punishment and they regret to notice that its use has increased rather than diminished. They trust, with the Inspector-General, that future reports will show a substantial decrease in the infliction of penal diet. The proportion of corporal punishments to the aggregate of punishments shows a diminution in all provinces. With the exception of Coorg (where though only 9 whippings were inflicted the proportion to total punishments is 11·54) the proportion is still highest in the Central Provinces, 1·46. The number of whippings in the Jubbulpore jail rose from 17 to 28, the majority of which were inflicted for assaults or thefts. Twenty-five of the prisoners who were whipped belonged to the habitual class. The Government of India are pleased to observe that the number of punishments in Berar jails decreased during the year under report although the discipline instituted during the preceding year, at the expense of a large increase in the number of punishments, was well maintained.

In connection with the subject of punishments the remarks of the Inspectors-General of Prisons, Punjab and the Central Provinces, illustrate the difficulty of determining with certainty the real causes of statistical fluctuations. The former observes that an increase in the ratio of punishments is attributed by some Superintendents to the stricter enforcement of discipline or to closer supervision leading to the detection of a greater number of offences, while other Superintendents cite these same influences in explanation of a diminution of punishments and point out that offences have declined owing to the increased risks of detection. The Inspector-General of the Central Provinces holds that punishments fluctuate in a jail according to what the jailor conceives to be the wishes of the inspecting officer, and he cites concrete instances to show that periods in which numerous punishments have been inflicted are followed by others in which punishments are few, although the behaviour of the prisoners has been uniformly unsatisfactory in both the earlier and the later period. Without the fullest knowledge of local and personal conditions it is obviously impossible to say to what extent any of these causes have contributed to the recorded results.

In the resolution reviewing the jail reports for 1903, the Government of India invited an expression of the views of Inspectors-General of Prisons on the question whether habitual offenders are less frequently punished than ordinary prisoners owing to their familiarity with jail rules, and whether they formed a nucleus for the contamination of the remainder of the prison population. Complete statistics were not available in the reports for 1904, but those for the year under review furnish information for most provinces, which confirms the opinion expressed in the resolution issued last November that habituals lay themselves open to more frequent and severe punishment than ordinary prisoners. In Madras habituals formed 41·82 per cent. of the total number punished, although the proportion they bore to the total prison population was only 30 per cent. The ratio of punishments inflicted upon habituals in the Bombay jails was 29·6 per cent. and the proportion of habituals to the average population 16·7. Fifty-four per cent. of the total jail offences in Bengal were committed by habituals though their proportion to the total population was 48·9 per cent. Of the punishments inflicted on prisoners this class alone received 63·78 per cent. of the major punishments and 73 per cent. of the corporal punishments. The figures in the United Provinces do not show so marked a disparity. There habituals formed 28·18 of the total population and received 29·88 of the total punishments. They, however, received over 50 per cent. of the floggings. In the Punjab, habituals committed 48 per cent. of the offences though they formed only 37 per cent. of the population. In Burma, the figures

are very adverse to the habitual. That class formed 37·61 per cent. of the daily average population and received 69·81 per cent of major punishments. In Eastern Bengal and Assam the habitual class received 42·75 per cent. of the punishments although it formed only 34·18 of the total average population. In the North-West Frontier Province the habitual offenders formed 5 per cent. of the total population but received 21 per cent. of the aggregate punishments, exclusive of warnings. These figures clearly show that habituals set a bad example to the rest of the prison population and afford further proof of the necessity for segregating them. As has already been remarked, the arrangements for the separation of the two classes are fairly complete and the Government of India trust that further measures to secure entire separation will be introduced as soon as may be practicable.

8. The results of the remission system during the year showed unimportant variations from those of the preceding year: 87 prisoners eligible for the mark rules failed to gain any remission compared with 88 in 1904: 31,284 compared with 31,223 earned remission, which varied according to length of sentence from an average of 27 days in the case of short-term prisoners to 497 days in the case of prisoners whose sentences exceeded ten years. The average amount of remission earned during the previous year was slightly larger. The maximum gratuity earned by any convict released during the year amounted to Rs. 52 against Rs. 86-12 in the previous year, but the average gratuity was the same in the two years. The Government of India last year commended to the notice of other local Governments the suggestion of the Inspector-General of Prisons, Punjab, that an annual return should be obtained from each jail to show how many prisoners have earned the special reward of fifteen days' remission for committing no offence during the previous twelve months. The suggestion has been accepted in some provinces. In Madras it is mentioned that the reward is much appreciated by prisoners and was earned by no less than 1,359. In the United Provinces 866 prisoners earned the reward in the Allahabad and Bareilly Central Prisons alone. Eighty-four prisoners in Eastern Bengal and Assam and 1,[illegible]71 prisoners in the Central Provinces obtained the reward during the year. The replies of local Governments regarding the proposals for the simplification of the remission system have been received and are now under the consideration of the Government of India.

9. The total cost of maintenance of the prisoners in jail during 1905 rose by Rs. 3,56,228 as compared with the preceding year. Except in Bengal, Burma, and the Central Provinces, the increase was general and was most marked (excluding Eastern Bengal and Assam where it was due to the transfer of districts from Bengal), in the United Provinces (Rs. 1,53,[illegible]), Madras (Rs. 87,337), and Bombay (Rs. 52,35[illegible]). The average gross cost of maintaining each prisoner (Rs. 66-15-10) was consequently higher (by Rs. 2-3-5) than in the year 1904.

The rates varied in the different provinces from Rs. 104-1[illegible]-2 in Coorg to Rs. 55-11-3 in Burma. The cash earnings per head ranged from Rs. 47-0-0 in the Central Provinces, Rs. 31-8-10 in Coorg, and Rs. 22-8-[illegible] in Bengal, to Rs. 8-3-0 in the North-West Frontier Province. The net cost per prisoner was lowest in Burma (Rs. 39-4-3), and the Central Provinces (Rs. 43-2-7), the United Provinces (Rs. 47-2-4), and Madras (Rs. 54-14-10) coming next in order.

Excluding Eastern Bengal and Assam, the greatest improvement as compared with the figures for 1904 was shown in the Central Provinces, where the cost to the State of each prisoner was reduced by nearly Rs 15. The reduction is due to savings in dieting and hospital charges, clothing and bedding, miscellaneous charges and other charges. The cost per prisoner in the Central Provinces is now less than in any other province excluding Burma. This is the more satisfactory since in 1904 the cost per head in that province was the highest with the exception of Coorg and Assam. The provinces in which the net cost to Government of maintaining prisoners was greatest were Coorg (Rs. 73-3-4) a head, Eastern Bengal and Assam (Rs. 61-11-4) a head, and Bombay (Rs. 60-1-1) a head. Last year the Government of India remarked on the high cost of prisoners in Assam jails. Any comparison between the figures of 1904 and 1905 is vitiated by the inclusion in the latter year of the statistics relating to the districts transferred from Bengal and the Government of India will, therefore, reserve their comments.

10. A full discussion of the statistics relating to the health of the prisoners will be found in the annexed note by the Sanitary Commissioner with the Government of India. The years 1904 and 1905 present a sharp contrast in respect of the conditions on which the public health depends. In 1904, except for the presence of plague, the public health was extraordinarily good and the rates of admission, constant sickness and death among prisoners were the lowest on record. In 1905 on the other hand unseasonable weather was followed by bad harvests in many places, and except in Bombay and the Punjab, the public health was below the average.

In spite of these adverse conditions the health of the prisoners in India and Burma was generally good, and although the unprecedentedly low death rate of 1904 increased by 1·62 to 19·23 per thousand, the rate of constant sickness was maintained at 28 per thousand, and the admission rate was further reduced by 29 to 647 per thousand. The increase in the death rate was common to all provinces except Madras, Bombay, the Punjab, and Burma; the death rates in two administrations, Eastern Bengal and Assam (32·96) and Bengal (24·91), were exceptionally high, but the death rate in Madras (15·87) was the lowest in the history of the Presidency. The principal causes of deaths were tubercle of the lungs, dysentery, and pneumonia. There was an increase in the incidence of cholera and plague, but the decline in the numbers of cases of cerebro-spinal meningitis continued.

The Sanitary Commissioner draws special attention to the successful results achieved by Colonel Bate, C.I.E., whose long connection with the Punjab jail administration terminated on his promotion in July 1905. The maintenance of the general health of the prisoners in spite of unfavourable conditions is very creditable to all concerned.

11. The Government of India desire to express their general satisfaction with the manner in which the administration of the jail department has been conducted during the year under review. The vital statistics show that close attention was paid to the health of the prisoners, and although the cost of their maintenance increased, every care was exercised to keep down the charges as far as possible. The Governor General in Council is pleased to record his appreciation of the work done by officers of all ranks during the year.

ORDER.—Ordered that a copy of this resolution be forwarded to all local Governments and Administrations for information and guidance and to the Foreign and Finance Departments for information.

ORDERED also that the resolution be published in the Supplement to the *Gazette of India.*

H. H. RISLEY,

Secretary to the Government of India.

G. C. Press, Simla.—No. 77 G. of I.—23 11 06—1,34 .—G. A.

Statement appended to Home Department Resolution Nos. 238—249, dated the 5th December 1906.

No. I.

GENERAL SUMMARY SHEWING the DISTRIBUTION of the PRISONERS of all CLASSES

1		2			3			4			5		
Province and year.		Places of confinement.			Prisoners in jail at the commencement of the year.			Received during the year.			Total.

NOTE 1.—Figures for the Hyderabad Assigned Districts (Berar) are, from 1903, included in the figures for the Central Provinces, as the former province is now an administrative division of the latter.

(a) Exclusive of lock ups.

NOTE 2.—Increase under Eastern Bengal and Assam in 1905 is due to the transfer of 15 districts from Bengal to the new province.

CONFINED in the JAILS and SUBSIDIARY JAILS of BRITISH INDIA in the calendar years 1901 to 1905.

6			7			8			
Discharged from all causes.			Remaining at the end of the year.			Total daily average number of prisoners.			Province and year.

(a) Criminal lunatics are excluded from the classification.
(b) These figures represent direct admission only, and do not therefore agree with the figures entered in column 3 of Table no. 2.
(c) Inclusive of figures entered in column 5 of Table no. 2.
(d) The classification of the convicts admitted into the Akola Central Jail according to age and state of education is not given, the records having been burnt. The previous occupation of the male convicts in that jail is also not given for the same reason.

No. 4.

CONVICTS admitted into the JAILS and SUBSIDIARY JAILS of BRITISH INDIA in the
to the Nature and LENGTH

(a) Inclusive of civil prisoners. These figures do not agree with those entered in column 2 (5) of table no. 8 as the latter excludes civil prisoners.

(b) Excluding an average of 10 State prisoners confined in the jails of Bengal in each of the years 1901 and 1902. Figures for 1903 include an average of 7 state prisoners and those for 1904 and 1905 an average of 4 State prisoners.

(c) Excluding an average of 2 State prisoners. | (d) Exclusive of lock-ups.

H. H. RISLEY,

Secretary to the Government of India.

Note by the Sanitary Commissioner with the Government of India on the sickness and mortality in the Jails of India in 1905.

The importance of prison sanitation in India may be measured by the fact that close upon half a million persons pass through the prisons every year. It is too much to hope perhaps that any considerable proportion of them should profit by lessons of order and cleanliness that they have been taught during their imprisonment; but it is of great importance that none of them should carry away with them from the prison the seeds of disease.

The more closely the problems of jail hygiene are examined, the more evident does it become that the secret of health in the prison is the exclusion of disease from outside, by thorough medical inspection and segregation of newly admitted prisoners, and the limitation of the evil results of any failure of these precautions by making the spread of contagion and the development of latent disease unlikely.

These preventive measures require suitably located, well drained jail sites, properly constructed roomy buildings, the control of the water and food supplies and efficient management. If these conditions are assured, sickness among convicts should be reduced to a minimum and the death rates should be much lower than the death rates of the free population—the comparison being made not with the crude general death rates but with the much lower rates among men and women of the same ages as the prisoners. Prison death rates, particularly in district jails, depend largely on the health of the prisoners that have to be admitted, but proper appliances, well managed, should banish contagious diseases from the prisons. The proof of the success of jail hygiene is not the low death rate of a prosperous, healthy year, but the steady growth of the difference between the jail death rates and the general death rates in unhealthy years.

In 1904, general conditions were peculiarly favourable to the health of the prisoners; in 1905 conditions in most parts of the country were unfavourable. The weather in the early part of the year was exceptionally cold and raw, the monsoon rains began late and ended early, and the heat of the summer and autumn was excessive. The cold weather crops of 1904-05 were below the average everywhere, except in the Punjab, the Frontier Province, Assam and Burma; and the *kharif* was bad or below normal in Bengal, Eastern Bengal and Assam, in parts of Madras, Bombay and the United Provinces, in the unirrigated areas of the Punjab, and in the Frontier Province. Except in Bombay and the Punjab the health of the general population was below the average and the death rate, in spite of the great reduction in plague mortality, was higher than in 1904.

2. The mean daily number of prisoners of all classes in India and the Andamans during 1905 was 106,265, or 1,940 more than in the previous year. The prison populations were slightly lower than in 1904 in the United Provinces, the Punjab and the Central Provinces, elsewhere they were higher, notably in Burma and Madras where the mean daily strengths were greater by 935 and 827, respectively.

In the Andamans an addition of 376 to the mean daily strength of 1904 brought the figure of 1905 to 14,348, which is more than a seventh of the Indian daily prison population. It is necessary to treat the statistics regarding convicts in the Andamans separately because the conditions under which they live differ widely from those under which the inmates of prisons of India and Burma live, their sick rate being nearly three times, and their death rate twice as large as the Indian means.

In the jails of India and Burma the mean daily strength in 1905 was 91,917, and the following are the salient statistical facts of the year 1905 compared with those of 1904 and the years 1901-1904. The population of 1905 was greater by 1,564 than that of the previous year, but less by 4,453 than the four years' mean; the rate of admission to hospital was 647 per thousand, or 29 per thousand less than the rate in 1904 which was the lowest on record, and 138 less than the four years' mean; the number constantly sick was 28 per thousand, identical with the figure of 1904, but 4 below the four years' average, and the death rate was 19·23 per thousand, 1·62 higher than the unprecedentedly low rate of 1904, but 2·35 below the four years' average. The admission rates in all the various administrations were lower in 1905 than the respective means of the previous four years, but only in Burma, the United Provinces, the Punjab and the Frontier Province were the admission rates lower than in 1904. The constantly sick rates were higher in 1905 than in 1904 in Eastern Bengal and Assam, in Bengal, the Frontier Province, the Central Provinces and Bombay; and in the first three of those provinces they were higher than the means of the four years 1901-1904. The death rates of 1905 were lower than those of 1904 in Bombay, Burma, the Punjab and Madras, elsewhere there was an increase, and in Burma, Eastern Bengal and Assam and in Bengal the death rates of 1905 were higher than the four years' average. The lowest death rates were 16·33 per thousand in the Punjab,—which, with the exception of the rates, 15·89 and 16·05 recorded in 1896 and 1897, respectively, is the lowest in the history of the province—15·79 in the Central Provinces, and 15·87 in Madras, where the next lowest rate on record was 16·13 in 1899.

Owing to the transfer of fourteen Bengal districts to the new province of Eastern Bengal and Assam, the province of Bengal lost the central jails of Dacca and Rajshahi and twelve district jails with a total accommodation for 4,749 prisoners; and by the transfer of Sambalpur from the Central Provinces to Bengal, those provinces lost and Bengal gained one district jail accommodating 155 prisoners.

3. The daily average number of convicted prisoners in 1905 was 86,375, among whom the death rate was 19·23 per thousand, the rates ranging from 32·02 in Eastern Bengal and Assam to 14·62 in the Central Provinces. In the following statement are compared the average daily convict populations of central and district jails and their admission and death rates in the several administrations in the years 1901 to 1905 inclusive.

In India as a whole the convict populations are fairly equally divided between central and district jails, but, while the central jail populations are considerably the larger in Bengal, and much the larger in the Central Provinces, Madras and Burma, in the other administrations the district jail populations are the greater. In India as a whole the admission and death rates are lower among central than district jail populations, and this is the rule with few exceptions in the several administrations; it is therefore important when comparing provincial death rates to take into account the proportions of the total populations confined in central and district jails. It will be observed that the death rate in central jails, 18·18 per thousand in 1905, is higher than the rates in both 1903 and 1904, but the death rate in district jails, 20·39, while higher than that of the preceding year, is lower than those of the other years.

4. The following table shows the distribution according to length of time spent in prison, with the actual number of deaths and the death rates of convicts in the jails in the years 1901 to 1905:—

Years.			1. Strength.		2. Deaths.		3. Ratio per 1,000 of strength.		
			Not exceeding six months.	Above six months and not exceeding one year.	Above one year and not exceeding two years.	Above two years and not exceeding three years.	Above three years and not exceeding seven years.	Above seven years.	Total.

It will be observed that even in the central jails a large proportion of the total population have been in confinement for less than one year, and that the death rates in the central jails among such prisoners are much lower than the rates among them in the district jails; that the death rates in district jails are highest in the first six months of imprisonment; and that in the central jails the highest rate is invariably recorded among prisoners who have spent between three and seven years in prison.

The chief causes of sickness were intermittent fever (admission rate 181·7 per thousand), dysentery (81·6), abscesses, ulcers and boils (71·2), diarrhœa (39·2) and respiratory diseases other than pneumonia (26·4); while the principal causes of death were tubercle of the lungs (death rate 3·19 per thousand), dysentery (3·01) and pneumonia (2·28).

Intermittent Fever.

5. There were 16,704 prisoners admitted to hospital on account of intermittent fever, or 2,821 fewer than in 1904, and little more than half the number admitted from the somewhat larger population (105,020) in 1901. This disease was, as usual, most prevalent in October, and the admission rates were highest in the North-West Frontier Province (344·0 per thousand) and Bengal (290·7), the rates ranging in the other provinces from 260·1 per thousand in Eastern Bengal and Assam, to 85·6 in Madras and 51·0 in Burma. The mean death rate ascribed to intermittent fever was ·91 per thousand. In the Central Provinces and North-West Frontier Province no death was recorded; in Bengal and Eastern Bengal and Assam the death rates were 2·75 and 1·87 per thousand, respectively, and in the remaining provinces the rates varied between ·79 in Madras and ·13 in Bombay.

There has been a great reduction during the last five years in the numbers of cases and deaths returned under the designation *remittent fever*; but in contrast to the gradual reduction in the numbers of cases of intermittent fever, the fall in the numbers of cases of remittent fever has been abrupt. In 1901 there were in all the jails 295 admissions and 41 deaths ascribed to this disease, and in the following year the number of admissions rose to 346 and there were 40 deaths; in 1903 the number of admissions and deaths fell to 143 and 19, respectively; in 1904 the figures were 102 and 15, and in 1905 the number of admissions increased by seven to 109 and the number of deaths by five to 20.

During the quinquennium ending with 1905, there were in all 995 cases of remittent fever, of which 647 occurred in three provinces, Bombay (314), Bengal (174), and Burma (159); and in the different provinces the case-mortality varied greatly between 29·6 per cent. in the Punjab and 5·3 per cent. in the Central Provinces. The vast majority of the cases—875 out of 995—occurred in district jails and the case-mortality among them was 12·5 per cent., as compared with 21·7 per cent. among the 120 cases reported from central jails. In 1905 the largest numbers of cases occurred in Bengal (21), the United Provinces (21) and Madras (19); but while in the United Provinces the largest number of cases in any one jail was five, in Bengal there were 13 cases in the district jail at Champaran, and in Madras there were 12 cases in the district jail at Tanjore.

As usual the disease was least prevalent in the cold weather, but in no other respect does its incidence agree with that of intermittent fever. The reports on fatal cases do not generally throw a clear light upon the nature of the disease although in many instances the disease does not seem to have been malarial. We have, then, a disease more frequent in some provinces than in

others, less fatal but more frequent in district than in central jails, the incidence of which, in the course of a single year, declined by half; the question arises, what is its nature? Many cases are no doubt severe attacks of malarial fever, others are *kala azar* and others again are confessions of failure to diagnose. Our knowledge of the nature of Indian fevers becomes wider and more exact every year, but it is still far from complete, and it is just these obscure cases of fever which are likely to give an opportunity to the pathologist to enlarge our knowledge.

Quinine prophylaxis is in general use and so also, apparently, are measures to prevent the breeding of mosquitoes in jails. Little mention is made by Inspectors-General of special measures undertaken in the jails or of the results obtained by them, and this omission is perhaps justified by the familiarity of the subject and by the great reduction of malaria among prisoners in recent years. The very fact of success should, however, encourage us to redoubled efforts, for a great deal can still be done. Making every allowance for the varying prevalence of malaria in different localities and in different years, the mean admission rate represents extraordinary variations in the different administrations and in the different jails under them. There were in 1905 seven jails with a mean daily strength of over 100 prisoners, in which the admission rate for intermittent fever was over 600 per thousand—to take a figure more than three times as great as the mean—and in some of these the frequency of malarial fevers does not appear to have attracted the special notice of the medical Superintendent. The explanation in some cases, no doubt, is the fact that in other respects the prisoners were very healthy with low death rates, and in others the difficulty of draining of the jail and its surroundings is considered insuperable from want of funds. It is, however, wiser in the long run to spend money on drainage than on hospital charges to which has to be added the loss of labour; and in most cases the reports appear to warrant the hope that well devised efforts intelligently directed and persistently carried out would be successful.

Dysentery.

6. The total number of recorded cases of dysentery in 1905 was 7,496, equal to an admission rate of 81·6 per thousand which is considerably lower than the rate in the previous year (85·7), and the mean of the previous four years (89·9). The number of deaths was 277 equal to a death rate of 3·01 per thousand, which, while slightly higher than the exceptional rate (2·91) of 1904, is considerably lower than the four years' average (3·87). As compared with 1904 there was a diminution in the number of cases in all administrations except Eastern Bengal and Assam and Madras, the decrease being specially remarkable in Burma, where the number fell from 561 to 358, and in the Punjab, where it fell from 570 to 327. In India generally the disease was most prevalent in August and least prevalent in February, the important provincial exceptions being the United Provinces and the Punjab, in both of which the maximum occurred in September, and Madras where it occurred in October. The dysentery death rates in 1905 were higher than in 1904 in all provinces except Bombay, where the rate remained stationary, Burma where the reduction was ·21 per mille, the United Provinces where the fall was ·40 per mille and the Punjab where the death rate decreased from 2·56 to ·52 per thousand. The case-mortality varied greatly, ranging from 10·0 per cent. in the North-West Frontier Province to 1·8 per cent. in the Punjab, the mean for India being 3·7, and the percentages in all provinces except the North-West Frontier Province, Burma (9·2), United Provinces (5·3), and Madras (4·8) being below the mean.

It is a misfortune when a disease is given a pseudo-scientific name from a symptom, for, unless this symptom is peculiar to one disease, a serious obstacle is placed in the way of the discovery of its etiology and when this is discovered there is confusion regarding the assignment of the name.

Dysentery affords a striking example of the truth of this statement. The symptom from which the name is taken is common to several diseases, it has taken a comparatively long time to discover their etiology, and great confusion prevails regarding their causes. Our knowledge has, however, advanced rapidly in recent years and the problem is so nearly solved that it is perhaps possible to classify the diseases with some approach to correctness. We may divide dysenteries into three classes: (*a*) epidemic or bacillary dysentery, caused by one or other type of the dysentery bacillus; (*b*) tropical, endemic or amœbic dysentery caused by the *Entamœba histolytica* of Schaudinn; and (*c*) false dysentery, including diseases characterised by discharges with more or less dysenteria, caused by inflammation of the bowel from any other cause, *e g*, bacteria, *Entamœba coli* and *Balantidium coli.*

As bacillary dysentery is not necessarily epidemic and may be endemic, and as amœbic dysentery occurs outside the tropics in places where it is not endemic, it is desirable to avoid alternative names and adhere to the terms bacillary dysentery and amœbic dysentery.

Bacillary Dysentery.—There are at least two well known types of the bacillus of dysentery—the Shiga-Kruse and the Flexner. On the one hand, however, authorities are agreed that these are not specifically distinct germs, but rather races of the same germ displaying biological differences; on the other, observers by the discovery of minor differences in the fermentation and agglutination reactions of the bacilli of various epidemics are adding to the number of types, thus Hiss describes four types, and Shiga, writing of the dysenteries of Japan, five.

It is probable that there is no need to depart from a conception of the specific unity of the bacilli of dysentery and that the importance of para-dysenteric bacilli may be limited to the preparation of vaccines or sera which may have to be polyvalent. Shiga states that the bacilli persist for a long time in the intestines of convalescents and may be carried by the apparently healthy, and Conradi has found dysentery bacilli in the stools of healthy persons in Metz. The life of the bacilli outside the body is, according to Shiga, of short duration. Frost and Whitman found that, at 17°—20° C., while the bacilli exposed on dry wood or paper died out rapidly, they lived for days and even for a month on dry bread or rice; and that although they seldom lived for a week in distilled water, they lived in milk until it dried up. The Shiga type was less hardy than the Flexner type, and the higher the temperature the sooner the bacilli died. Observations connecting the severe summer diarrhœas of children with the bacilli of dysentery are accumulating; according to Jehle and Charleton the Shiga-Kruse type is most common in epidemic diarrhœa and the Flexner type is most common in sporadic cases. The connection of diarrhœa in children with dysentery has an obvious application to the prevention of the disease, while the rôle played by flies in the contamination of food as described by Sandilands not only demonstrates the necessity for the immediate destruction of dysenteric dejecta, but suggests other means of precaution such as the suitable location of dysentery wards and latrines.

Amœbic Dysentery.

7. It is important that the cause of each case of dysentery should be ascertained. Leaving the clinical signs and symptoms on one side, we have the following means of diagnosis: (1) serum diagnosis—the bacillus of dysentery is agglutinated only by

the blood of the subjects of bacillary dysentery, but the agglutinating property does not appear in the blood until about the end of the first week; (2) the recovery of the bacillus by cultivation from the fæces; and (3) the discovery of amœbæ in the stools. In fresh material from an acute case of dysentery, under a low power, the amœbæ appear as small, clear shining discs; higher magnification revealing active movements. They may be distinguished from large leucocytes by their greater size (10—30 μ Kartulis) by the greater development of pseudopodia and by more lively movements; and from the *Entamœba coli* by the generally distinct division of the clear ectoplasm from the granular endoplasm, which in the *entamœba coli* are distinct only when it is moving actively, by the small, generally eccentric nucleus, by the absence of a nuclear membrane, and by the formation of small cysts (3—6 μ) which, according to Lesage, can be readily seen a few minutes after the addition of iodised water. Difficulty in seeing the amœba may arise from absence of movement which may be due to too low temperature of the slide or the presence in the stool of an antiseptic drug, *e.g.*, calomel (Kartulis).

It is probable that the *Entamœba histolytica* is not the only pathogenic amœba, and although Kartulis states that all dysenteric amœbæ examined by him have been the same, he says that Schaudinn informed him that he recognised two varieties, and that Ruge believes the dysenteric amœbæ of China differ from those found in Java. Numerous cultivation experiments have been made with amœbæ and Lesage describes the successful cultivation of *Entamœba histolytica* in association with a bacterium of the coli group on washed, sterilized agar. The same observer states that the resistance of the living amœbæ in culture is remarkable, the amœbæ living for four to five months and the cysts for six to eight months at a temperature of 20°—25° C. As pointed out by Schaudinn the cysts are the more dangerous form, probably because they are more resistant to the gastric juice, and cysts are formed in the intestine at the termination of a case, and, outside the body, whenever, apparently, conditions are unfavourable to the life of the amœba; cold, for instance, will cause amœbæ to form cysts.

Infection may persist for very long even after the patient is apparently quite cured, a refuge of the amœbæ being the vermiform appendix. Of especial interest is the fact that these amœbæ may be the cause of intractable chronic diarrhœa. Meyer cites two cases where the diarrhœa had been of 15 years' duration and a third of 18 years' duration in which cure followed specific treatment administered on the discovery of the presence of amœbæ in the stools.

In the Andamans, Major Anderson, I.M.S., reports that the *Entamœba histolytica* was found in 488 of 920 cases of dysentery examined, but in only 29 of these cases were the amœbæ unaccompanied by other protozoa. In order to check these figures an examination was made of the dejecta of 118 men admitted to hospital for fever, of whom 34 had suffered from dysentery more than a year previously and 84 had never been admitted to hospital for dysentery. Among the 34 the amœba was found in 15; among the 84 amœbæ were present in 17; in a few instances these amœbæ resembled those found in the dysenteric cases, but in most instances the amœbæ conformed with the description of *Entamœba coli*.

In view of the connection established between dysentery and abscess of the liver, the proportions between the numbers of these diseases occurring among prisoners and others is interesting. In the Andamans in 1905 there were 2,359 cases of dysentery admitted into hospital—perhaps we may assume that 1,000 were cases of amœbic dysentery—and three cases of abscess of the liver; in

the last five years there have been 10,428 cases of dysentery and 11 cases of abscess of the liver. In the Indian jails in the last five years there have been 42,152 cases of dysentery and 42 cases of abscess of the liver. In the Native Army the proportion was much higher, 23,516 cases of dysentery and 72 cases of abscess of the liver. The contrast between these figures and those for the European Army is an extraordinary one; among British soldiers, during the five years there were 5,581 cases of dysentery and 860 cases of abscess of the liver. It is evident then that although dysentery may be a necessary antecedent of abscess of the liver, abscess of the liver is not among natives a common sequel of dysentery; and it appears that there must be some other condition operative among Europeans. Musgrave notes that experiments in his laboratory indicate that amœbic abscess rarely or never develops in an otherwise normal liver, notwithstanding the fact that amœbæ may be almost constantly poured into it from an ulcerated bowel. Allusion may be made to the report of an isolated experiment in which Dr. Gauducheau injected pus from a tropical abscess into the mesenteric vein of a dog; the result was not an abscess of the liver but amœbic dysentery.

Diarrhœa.

8. The number of cases admitted to hospital under this heading was 3,603, of which 68 ended fatally, the mean admission and death rates being, respectively, 39·2 and ·74 per thousand, the lowest on record. The highest admission rates were 90·9 per thousand in Bengal and 90·0 in Eastern Bengal and Assam; in the other administrations with one exception, the rates varied between 42·9 in the Punjab and 17·6 in Burma; the exception is Madras where the admission rate was 3·5 per thousand and only 36 cases were recorded as diarrhœa. The highest death rates were 1·15 per thousand in Bombay and 1·06 in Bengal, the rates in Madras, ·30, the Central Provinces, ·28, and the Punjab, ·17, being the lowest.

Respiratory Diseases other than pneumonia.

9. The number of cases admitted on account of diseases classified under this heading was 2,428, and the number of deaths was 85, the rates being 26·4 per thousand and ·92 per thousand as compared with 25·1 and ·65 in 1904. The increase in the admission rates which depended to some extent on the greater prevalence of influenza was common to all administrations, except the North-West Frontier Province, the Central Provinces and Madras, and the increase in the death rates was common to all except the North-West Frontier Province and Madras.

Pneumonia.

10. In spite of the wide diffusion of influenza the number of cases of pneumonia fell from 965 in 1904 to 896 in 1905, and the number of deaths from 252 to 210, the admission and death rates, 9·7 and 2·28 per thousand, respectively, being the lowest on record. The reduction in the admission rates was most remarkable in the Punjab and the North-West Frontier Province; in Burma, Madras, the United Provinces and the Central Provinces the admission rates rose. The death rate fell in Eastern Bengal and Assam, the Punjab, the North-West Frontier Province and Bombay, the further reduction from 19·34 per thousand to 15·79 in the Sind Gang in that province being satisfactory. The case-mortality varied considerably in the different provinces being exceptionally high in Bengal (34·1 per cent.), Burma (31·0), Eastern Bengal and Assam (28·1), and comparatively low in the Punjab (17·7), Madras (16·7), the Central Provinces (14·3) and the North-West Frontier Province (11·1). The mean stay in hospital of fatal cases was between eleven and twelve days; in the United Provinces and Bombay the mean duration of fatal cases was only about seven

days owing to the large numbers of cases which proved fatal in the first few days of the disease.

The importance of efficient ventilation in the prophylaxis of pneumonia is recognised everywhere, and endeavours are generally used to secure the best ventilation of the sleeping wards possible; but it is obvious that the difficulty of this task may be greatly increased by climatic conditions and badly constructed buildings. When cases occur in the prisons those measures of segregation and disinfection considered necessary in other cases of infectious fevers are generally carried out. Attention has recently been drawn to the possible rôle played by oral sepsis in predisposing to the more serious prison diseases, and in this connection the recently made statement that the pneumococcus, which is present in the mouths of a certain proportion of healthy persons, increases in virulence in a neglected mouth and disappears altogether from a thoroughly cleansed one, may be noted.

Tubercle of the lungs.

11. As compared with the previous year there was a considerable increase in the prevalence and fatality of cases of tubercle of the lungs, the number of admissions rising from 763 to 803, and the number of deaths from 279 to 293—an admission rate of 8·7 per thousand and a death rate of 3·19. The disease was as usual most prevalent in the jails of Bengal (admission rate 13·5 per thousand), Eastern Bengal and Assam (11·4) and Madras (10·5), and least prevalent in the jails of Bombay (6·1), the Central Provinces (5·6) and the North-West Frontier Province (3·8); while the death rates were highest in Bengal (4·02 per thousand) and the Punjab (4·43), and lowest in the Central Provinces (1·97) and the North-West Frontier Province (1·52).

In India generally, tubercle of the lungs was the cause of 16·6 in every hundred deaths. This percentage varied greatly in the different administrations, the more remarkable percentages being 27·1 in the Punjab, 22·3 in Burma, 12·5 in the Central Provinces, 10·4 in Eastern Bengal and Assam, and 7·7 in the North-West Frontier Province. In India generally, and in Burma, the United Provinces, the Punjab, Bombay and the Central Provinces, tubercle of the lungs was a more frequent cause of death among prisoners than dysentery. Analysis of the statistics shows that the mortality from tubercle of the lungs was much higher among those convicts who had been more than three years in prison than among the remaining body of convicts, the death rates being 8·06 among the former and 2·59 among the latter. Unfortunately the returns giving the numbers admitted to hospital do not discriminate between short and long term prisoners, and the death rates alone cannot give accurate information regarding the prevalence of the disease among short and long term prisoners, respectively, because a larger number of the former than of the latter are likely to be released before the termination of the disease. Of the 90 long term prisoners that died, however, 47 were in good health at the time of conviction, and the mean duration of their illness from admission to hospital until death was 124 days, so that it is reasonable to suppose that the great majority contracted the disease in prison. There are considerable differences in the mean stay in hospital of these cases in the different administrations, in Bombay the mean was only 68 days, in Madras 83 and in the Central Provinces 84, while in the United Provinces the number of days spent in hospital was 153, and in Bengal 142.

The nature of tubercular infection and the manner of the entry of infection into the human body are still the subjects of a discussion to which allusion is made only for the purpose of directing attention to the possibility of a proportion

of cases of tubercle in the jails being the development of a latent infection. That this is possible is suggested by the large number of cases which occur among apparently healthy prisoners in jails where the hygienic precautions taken might be expected to exclude the probability of infection ; and the possibility emphasizes the importance of a strict watch over the health of those prisoners whose physical conformation or previous history indicates the possible presence of latent tubercle.

The principles of prevention as recently described by Koch in the Nobel lecture are thoroughly understood in the jails, and are generally applied. In many prisons tuberculous patients are treated in a special open air ward, but these wards are not all equally well constructed. Care should be taken that, while the occupants of the ward are not exposed to chilling winds, ventilation is thorough, and that there is no dead space in the roof in which the air can stagnate ; the existence of such a dead space will render the air of a ward, even if it be completely open on all sides, unpleasant in still weather. The arrangements for the reception and disposal of tuberculous sputum should be complete and the ward should be kept scrupulously clean, otherwise it may become a centre for the collection and distribution of tuberculous material.

Anæmia and Debility.

12. There were 1,014 cases and 50 deaths recorded under this heading, with admission and death rates of 11·0 and ·54 per thousand, respectively, as compared with 12·4 and ·41 in the previous year and means of 13·5 and ·57 in the previous four years. These conditions of bad health were far more prevalent in the jails of Eastern Bengal and Assam than in that of any other administration, the admission rate being 32·2, and the death rate 2·66 per thousand, compared with 17·9, the next highest admission rate, recorded in the Punjab, and ·76 the next highest death rate, recorded in Bombay. The lowest admission rates were 4·3 in Madras and 3·1 in Burma, and in all provinces the admission and death rates were below the means of the last four years except in Eastern Bengal and Assam where both rates were higher, Bengal and the North-West Frontier Province where admission rates were higher, and the Punjab where the death rate was higher. The geographical distribution of the high death rates is important ; they were highest in Assam (Group III) 5·75, Western Coast (X) 1·73 and Bengal and Orissa (IV) ·92. The convenience of the heading anæmia and debility for the purpose of hospital registers is obvious, but the condition must depend upon some cause either in the victim or his surroundings, and the occurrence of large numbers of such cases in a jail should lead an Inspector-General to ascertain whether they are due to failure to diagnose or to some remediable defect in the conditions of the prisoners' lives. The *post-mortem* records show easily recognizable organic disease in many cases ; a few cases were almost certainly *kala azar* ; and anchylostomes were frequently found in the intestines. In this connection attention may be drawn to the revival in a modern form by Shipley and Fearnsides of the old idea that the anæmia of anchylostomiasis is due to a hæmolytic toxin secreted by the anchylostomes—probably in the cephalic glands.

Small-pox.

13. There were in all 31 cases of small-pox, including 14 in Bombay and four each in Madras and the United Provinces, as compared with 25 cases and four deaths in 1904.

Plague.

14. There were 66 cases of plague in the jails of which 46 were fatal, as compared with 37 cases and 24 deaths in 1904. In the United Provinces (26 cases) the disease appeared in eleven jails ; in Bombay (15 cases) in four jails ; in Bengal (14 cases)

in six. jails; in the Punjab (6 cases) in three jails; in the Central Provinces (3 cases) in two jails; in Burma and Ajmer one case each.

Cerebro-spinal Fever.

15. The decrease in the numbers of cases of this disease was maintained, the numbers of cases and deaths falling from 23 and 18 in 1904 to ten and nine in 1905, and the number of jails in which cases occurred from eleven to six.

Enteric Fever.

16. There were 64 cases of enteric fever and 15 deaths, a larger number of cases than in any of the past ten years except 1902, when there were 69 cases and 15 deaths. There were 28 cases in the Madras jails, Coimbatore contributing 18 and Cannanore six. In Eastern Bengal and Assam there were 12 cases, ten in the Mymensingh jail and two at Rangpur. No case was reported in Bombay, the Central Provinces or the North-West Frontier Province. In most instances the *post-mortem* observations supported the diagnosis.

Cholera.

17. The number of cases of cholera was 73, of which 40 were fatal against 47 and 31 in 1904, and 97 and 57 in 1903. Most of the cases (37 with 14 deaths) occurred in Madras, an outbreak in the jail at Rajamundry accounting for 30 cases of which ten were fatal. In Eastern Bengal and Assam there were twelve cases and all were fatal. Except at Rajamundry the cases were sporadic, and the jails in Bombay and the North-West Frontier Province were free from the disease.

The following paragraphs deal with the more important features of the provincial reports.

Bengal.

18. The year was comparatively unhealthy; there was a slight increase in the mean daily population and the admission and death rates rose from 883 and 19·55 per thousand in 1904 to 954 and 24·91. The difficulty in providing sufficient accommodation has been increased owing to the more complete separation of different classes of prisoners that is now required; and it is evident that steps must be taken to obtain more accommodation, since in 16 jails there was overcrowding among convicts throughout the year and in nine jails the under-trial wards were not sufficiently large for the number of under-trial prisoners in confinement. The principal causes of admission to hospital were intermittent fever (30·49 per cent. of all admissions) and dysentery and diarrhœa (30·12); and the principal causes of death were dysentery (26·3 per cent. of all deaths), tubercle of the lungs (16·1), intermittent fever (11·0) and pneumonia (8·5). There were 2,783 admissions to hospital on account of dysentery and 93 deaths, a case-mortality of 3·34 per cent., which is below the mean for Indian jails (3·7), and may be due, as the Inspector-General suggests, to prompt admission to hospital of mild cases, or to the presence of a less deadly form of the disease. Regarding oral sepsis the Inspector-General remarks that medical officers have not been able to trace any connection between it and the prevalence of dysentery, and they do not consider the condition in any sense scorbutic. Even if there is no direct connection between oral sepsis and dysentery it cannot, as the Inspector-General says, be good to swallow pus organisms; the loss of teeth must result in dyspepsia which is generally considered a predisposing cause of dysentery; we have seen that the presence of oral sepsis may determine an attack of pneumonia, and there is evidence that it may furnish an entrance for tubercular infection in the young; the removal of the condition, therefore, is an important detail of jail hygiene.

There was a slight reduction in the number of cases of intermittent fever, the total being 4,120, compared with 4,271, in preceding year, but the number of fatal

cases rose from 12 to 39. Nearly half the deaths occurred in cases of malarial cachexia and it seems possible that some of these were cases of *kala azar*. Quinine prophylaxis is used by Koch's method, and the Inspector-General remarks that the result is not seen in any considerable reduction in the number of admissions for fever, but most medical officers comment on the fact that the disease is of a milder type and more easily cured. Tubercle of the lungs was more prevalent and fatal than in the previous year, and the Inspector-General proposes to segregate at Berhampore tubercle cases from all jails.

The death rate in four jails was over 40 per thousand; one of them, Khulna, is a small jail and the death rate must vary, the high death rate in the others is attributed to overcrowding or to structural defects in the barracks.

Eastern Bengal and Assam

19. There was a slight increase in the average strength—from 6,211 in 1904 to 6,401 in 1905—of the prisoners in the jails of Eastern Bengal and Assam. The year was unhealthy, the admission, constantly sick and death rates rising from 979, 37 and 22·38 per thousand, respectively, in 1904, to 1,081, 46, and 32·96 in 1905, rates which are higher than those recorded in recent years. The chief causes of sickness were dysentery and intermittent fever, and, to a less extent, diarrhœa. The deaths were due to dysentery, tubercle of the lungs and beri-beri which occurred in an epidemic form at Sylhet and caused 21 deaths. In five of the jails, with a population of over one hundred, the death rates exceeded 45 per thousand, namely Barisal (62·87), Gauhati (58·25), Dibrugarh (57·69), Sylhet (54·79) and Tezpur (45·28).

United Provinces.

20. Climatic conditions were not favourable to the health of prisoners: the cold in the early months of the year was extreme, and the hot weather was more trying than usual. There was considerable distress among the agricultural population; and influenza was prevalent. In these circumstances it is satisfactory to note a considerable reduction in the admission rate from 612 per thousand in 1904 to 569 in 1905, and a fall in the constantly sick rate from 28 to 27. The death rate, however, rose from 14·56 of the previous year which was the lowest ever recorded, to 17·31; this is not a high rate and the Inspector-General remarks that at least a third of the deaths were due to diseases contracted before admission to jail or to injuries. The increase in mortality was due to heat apoplexy and the occurrence in the jails of a large number of cases of plague.

The chief cause of sickness was intermittent fever (32 per cent. of all admissions); and the chief causes of death were pneumonia (17·3 per cent.), tubercle of lungs (15·4) and dysentery (11·2). In seven jails with a strength of over 100 prisoners including the central jail at Benares the death rates were over 30 per thousand. The high death rate in the Benares central jail (33·6) is of particular interest as the situation, arrangement and management of the jail are satisfactory, and the death rate of 1904 was only 10·37. The population of the jail had been reduced and it contained a very large proportion of old men whose latent organic defects rendered them unable to withstand the peculiarly unhealthy conditions prevalent in the Benares district. At Gorakhpur the special precautions taken for the purpose of preventing dysentery getting into the jail, to which reference was made last year, were successful and only one death from dysentery occurred in the jail.

Punjab.

21. The daily average population has been steadily falling since 1900, and in 1905 the daily average convict population was lower than it has been since 1896.

The year 1905 is a memorable one in the annals of the Punjab jail administration: the admission rate fell from 907 per thousand in 1904 to 708, the constantly sick rate from 31 to 26, and the death rate from 19·76 to 16·33—one of the two lowest rates on record. Very remarkable was the decline in the numbers of deaths from dysentery from 30 to 6, and from pneumonia from 64 to 29. The number of deaths from tubercle, however, rose from 40 to 51 and there were 13 deaths from sunstroke, four from cholera and five from plague. The number of admissions to hospital on account of malarial fever fell from 4,014 to 2,834, and the number of deaths from 10 to 6, which is attributed to "the administration of quinine in large doses at stated intervals during the malarial season and especially to prisoners after admission, together with the abolition of breeding grounds of mosquitoes in the vicinity of jails."

Colonel Bate, C.I.E., I.M.S., who had held the office of Inspector-General of Prisons in the Punjab since April 1891, demitted office on promotion. The improvements in the condition of the prisoners effected by him during his long tenure of office may be judged from the following figures: in the ten years ending 1891 the mean death rate was 32·77, in the following ten years the mean death rate was 22·14, and in the four years ending 1905 it was 20·19.

North-West Frontier Province.

22. The daily average population was 1,314, showing a continuation in the steady increase due to heavier sentences and fewer transfers to the Punjab jails. There was occasional overcrowding especially in the Kohat and Abbottabad jails. The admission rate fell from 1,102 per thousand in 1904 to 960, but the constantly sick and death rates rose from 32 and 14·65, respectively, to 34 and 19·79. The principal causes of sickness were ague, abscesses and influenza, and dysentery was the chief cause of death.

Central Provinces and Berar.

23. The average daily population fell from 3,740 in 1904 to 3,547 in 1905; but the admission, constantly sick and death rates all rose—from 586 to 630, from 20 to 21 and from 12·57 to 15·79. The number of admissions on account of malarial fever was greater than in 1904, and this fever accounted for 30·27 per cent. of all admissions, but there was no fatal case. Tubercle of the lungs, pneumonia, other respiratory diseases and dysentery were the principal causes of death. The number of cases of pneumonia increased from 25 to 35, and it was suspected that infection was conveyed by blankets which are to be systematically boiled in future. In the five central jails there were only 81 admissions and three deaths from dysentery, and it is noteworthy that in the Jubbulpore central jail, which was recently notorious for the high mortality from dysentery in it, a daily average population of 840 was entirely free from that disease throughout the year. The number of cases of diarrhœa fell from 169 to 128, but the Inspector-General considers that the number should be still lower, and alludes to the practice of habitual convicts securing a holiday in hospital on account of diarrhœa induced by eating irritant seeds.

Madras.

24. There was a considerable increase in the daily average strength from 9,320 in 1904 to 10,147. The admission rate rose from 439 to 469, but the constantly sick and death rates fell from 20 and 16·52 per thousand to 19 and 15·87, both lower than any hitherto recorded. The death rate would have been only 14·49 but for the occurrence of cholera of which there was an epidemic (30 cases, but only ten deaths) at the Rajamundry central jail and (seven cases with 4 deaths) in the

Madras Penitentiary and Nellore district jail. Ague (18·25 per cent. of all admissions), dysentery (13·63 per cent.), simple continued fever (7·24 per cent.) were the chief causes of sickness; dysentery (19·3 per cent. of all deaths), tubercle of the lungs (14·9 per cent.), pneumonia (9·3 per cent.) and cholera (8·7 per cent.) were the chief causes of death. The special hospital for tubercle at Trichinopoly was in use with much advantage throughout the year; the construction of the special hospital at Bellary has not been completed.

Bombay.

25. The daily average population increased slightly to 7,851, and the admission and constantly sick rates rose from 600 to 603 and from 25 to 27 per thousand, respectively, but the death rate fell from 19·22 to 17·45, the lowest rate recorded.

The principal cause of sickness was ague which accounted for 22·30 per cent. of all admissions. The chief causes of death were pneumonia (17·5 per cent. of all deaths) and tubercle of the lungs (13·1 per cent.). There was overcrowding in the Common Prison, Bombay, Rajkot, Hyderabad, and Shikarpur. The Thana jail was overcrowded for a short time, but during the greater part of the year the population was kept below the number for which accommodation is provided according to scale. The death rate of this jail fell from 23·39 in 1904 to 14·83 and although tubercle continues to be the principal cause of mortality, the measures taken—the provision of a tubercle ward, early isolation of cases, the renewal of every floor in the prison and the thorough disinfection of the floors—have brought about a great diminution in the prevalence of the disease.

The total number of cases of pneumonia fell from 119 to 106 and the number of deaths from 38 to 24. In the Sind Gang there was no virulent outbreak and the Inspector-General quotes Major Jackson's opinion that the improvements effected in the surroundings of these prisoners will render pneumonia no longer formidable among them.

Burma.

26. There was a considerable increase in the daily average strength from 11,704 in 1904 to 12,639 in 1905, a number not far short of the total, 15,284, for which accommodation is provided. The health of the prison population continued excellent, the admission and constantly sick rates falling from 387 and 20 per thousand to 320 and 17—the lowest rates on record—and the death rate from 18·63 to 17·01, the third lowest rate on record. The food of the prisoners was the subject of particular attention during the year, and arrangements were made to secure pure drinking water for the inmates of the jail at Mandalay. The success which has attended the efforts to improve the hygiene of this jail may be gauged from the reduction in the death rate from 79·30 per thousand in 1904, to 17·31. The jail at Thayetmyo, however, was unhealthy in 1905, the death rate rising from 12·91 in the previous year to 37·66, due to the prevalence of dysentery and diarrhœa for which the flooding of the jail's surroundings owing to an unusual rise of the river and the pollution of the river water are blamed. There were seven cases of beri-beri and four deaths in this jail in which, it may be noted, a great outbreak of that disease occurred in the summer and autumn of 1881. The recent outbreak was promptly checked by the removal of the patients from the jail and the disinfection of their clothing and bedding and of the dormitories occupied by them. The chief causes of sickness were abscesses and ague, and the chief causes of death were tubercle of the lungs and dysentery. The term 'abscess' includes the results of injuries, many of which were found to be self-inflicted.

Ajmer, Mercara, Quetta and Secunderabad.

27. In the jail at Ajmer there was some overcrowding, but the health of the prisoners was remarkably good, the constantly sick and death rates among a population of 412 being 22 and 17 per thousand, respectively. Prisoners often suffer from guinea-worm attributed to the drinking water. There was one death from plague. In the Mercara jail the average daily population was 87, and the constantly sick and death rates 11 and 45·98 per thousand, respectively. The general health was good ; of the four deaths, three were due to pneumonia. At Quetta the average daily population was 70 ; there was no death. At Secunderabad the average daily population was 85 ; there was no death.

Andamans.

28. In 1905 the rainfall recorded in the Andaman Islands was 101·09 inches, which is twenty inches less than the fall of the preceding year and about seventeen inches below the mean of the preceding five years. The convict population continues to increase, the average daily strength rising from 13,972 in 1904 to 14,348. No change has been effected in the permanent barracks, but many bamboo and thatch barracks were constructed and occupied during the year, while two additional wards for phthisical patients and an additional ward for lunatics were opened, one of the former being used for general hospital purposes. No change has been made in the water-supply or in the conservancy arrangements. The swamp to the north of the female jail was partially drained, but still includes pools in which anopheles mosquitoes breed. No change was made in the diet scale, but the quality of the supplies has been improved. The Senior Medical Officer considers that the inferior quality of the wheat, particularly its mouldiness, is a principal cause of the dysentery which is so prevalent among the convicts and the results of a series of experiments carried out with wheat cleaned and ground by different methods afford evidence of the correctness of his view. He recommends that in future (1) all foreign matter and diseased grain should be carefully removed from the wheat before grinding ; (2) the wheat and *atta* should be systematically dried ; (3) excess of bran should be removed from the *atta* after grinding ; (4) each sack of food material should be carefully inspected before issue for use ; and (5) the food should be stored in a godown rendered as far as possible damp proof and weevil proof. The use of several kinds of *dhal* has been introduced. The vegetables issued to the convicts have been of much better quality owing to the increased number of gardens in various stations, with the result that scurvy is rarely seen. Cleaned vegetables are now issued to the inmates of the female and cellular jail. Improvements have been effected in the milk supply.

The admission rate fell from 1,909 per thousand in the previous year to 1,898, but the constantly sick and death rates rose from 64 and 34·75 per thousand to 68 and 38·96. The increase in the constantly sick and death rates were due to the prevalence of dysentery and cellulitis in the first part of the year ; and the constantly sick rate is kept up by the detention in hospital of all recognized cases of phthisis.

Dysentery is the great scourge of the Settlement, the number of cases in 1905 was 2,359 or 89 more than in the previous year, and the number of deaths rose from 111 to 187, equal to a death rate of 13·03 per thousand, four times the Indian mean death rate. The admission and death rates from tubercle of the lungs were 11·4 and 6·48 per thousand ; both rates lower than those of the preceding year and this encourages the hope that the vigorous measures adopted against the disease are successful. The average stay in hospital of fatal cases was 230 days.

Malaria was the cause of 17,881 admissions and 12 deaths, compared with 16,395 admissions and 34 deaths in 1904. The most common anopheles found in the Settlement resembles *A. rossi*, but Lieut.-Colonel Alcock, I.M.S., considers it differs sufficiently to deserve another name and has provisionally named it *A. andersonii*. This mosquito and *A. barbirostris* are considered by Major Anderson, the Senior Medical Officer, to be the common carriers of malaria. Cellulitis which caused 188 admissions and 18 deaths was, as already noted, most prevalent early in the year, but became much less virulent as the year advanced; the improvement being attributed by the Senior Medical Officer to improved barrack accommodation.

29. The general results of jail management during the year, so far as the health of the prisoners is concerned, were satisfactory, and the Government of India have good reason to be well pleased with the care and skill displayed by the Inspectors-General and the medical staff of the prison administrations.

Appendix to the Note on Jails by the Sanitary Commissioner with the Government of India for 1905.

FREDERICK NOEL-PATON,
Director-General of Commercial Intelligence.

J. S. MESTON,
Secretary to the Government of India.

Calcutta, December 5, 1906.

INDIAN PUBLIC WORKS DEPARTMENT.

REGULATIONS AS TO APPOINTMENT OF ASSISTANT ENGINEERS, 1907.

1. The Secretary of State for India in Council will, in the summer of 1907, make **not less than twelve** appointments of Assistant Engineer in the Public Works Department of the Government of India.

In making these appointments he will act with the advice of a Selection Committee, including at least one eminent representative of the Engineering profession.

2. Applications for the appointments must be made on a printed form to be obtained from the Secretary, Judicial and Public Department, India Office, Whitehall, London, S.W., and to be returned so as to reach him not earlier than 1st March 1907, or later than **Wednesday, the 1st May** 1907.

No applications received after the latter date will be considered.

3. Candidates must have attained the age of 21 and not attained the age of 24 years on the 1st July 1907.

4. Every candidate must be a British subject of European descent, and at the time of his birth his father must have been a British subject, either natural-born or naturalised in the United Kingdom. The decision of the Secretary of State in Council as to whether a candidate satisfies this condition shall be final. He must also be of good moral character and sound physique.

5. Candidates must have obtained (1) one of the University degrees mentioned in Appendix I., or (2) such diploma or other distinction in Engineering, as may, in the opinion of the Selection Committee, be accepted as approximately equivalent thereto.

It will, therefore, be for the Selection Committee to decide, in dealing with the applications, whether they will recommend any candidate under head (2).

6. It is desirable that candidates should have had some experience as assistant in the preparation of the designs for, or in the execution of, some engineering work of importance.

7. Candidates must be prepared, if called upon, to attend at the India Office, at their own expense, for a personal interview with the Selection Committee.

8. They will further be required, before final appointment by the Secretary of State in Council, to appear before the Medical Board at the India Office for examination as to their physical fitness for service in India.

A copy of the "Regulations as to the Physical Examination" of Candidates for Indian appointments will be forwarded on application to the Under Secretary of State.

9. Candidates will also be required, before final appointment, to satisfy the Secretary of State, in such manner as he may determine, of their ability to ride.

10. They will on appointment be provided with free first class passages to India, and they will be expected to proceed thither about the end of September 1907.

Their pay will begin from the date of their landing in India, and, if they so desire, they will be able to obtain in India an advance of two months' pay, recoverable by monthly instalments of one-third of salary.

11. They will enter the service as Assistant Engineers, third grade, on a salary of Rs. 4,200 a year (equivalent to 280*l*. year, when the rupee is at 1*s*. 4*d*.).

12. The instruments required by Assistant Engineers are supplied to them in India.

13. Particulars as to their prospects of pay, pension, etc., are contained in Appendix II.

INDIA OFFICE,
18th July 1906

NOTE FOR THE INFORMATION AND GUIDANCE OF CANDIDATES.

The Selection Committee of 1906 again drew attention to the subjects which were held to be of most importance for the Public Works Service, *viz.* :—

Pure Mathematics, including a knowledge of the differential and integral calculus.

Applied Mathematics.

Geometrical and Engineering Drawing.

Surveying and Geodesy.

Strength of Materials and Theory of Structures.

Hydraulics.

Heat Engines.

Materials used in Construction.

Building Construction.—Wood and metal work, limes and cements, and building with stone, brick, and concrete.

Knowledge of the principles of road-making, waterworks, sanitary and railway engineering. (Important)

The Selection Committee were further of opinion that all candidates should have had some workshop training.

☞ *The following Announcements regarding the recruitment of the Public Works Department in future years are published for the information of intending candidates :—*

(*i*) *The foregoing Regulations apply only to the appointment of Assistant Engineers in the permanent establishment of the Public Works Department in 1907, but it is the intention of the Secretary of State for India in Council, as at present advised, to recruit the permanent establishment of the Department in succeeding years on the same general lines as those already laid down.*

He is, however, unable to give any undertaking that the Regulations will remain unaltered in the future.

(*ii*) *After the Royal Indian Engineering College at Coopers Hill ceases to supply Engineers for the Public Works Department, and recourse is had solely to the open market, Natives of India will be eligible, under the regulations issued from year to year by the Secretary of State for India in Council, for appointments in that Department, provided that the total number of Natives of India recruited in the United Kingdom under the Regulations shall not at any time exceed 10 per cent. of the total number of Engineers thus recruited.*

The appointments will be confined to men of high qualifications who satisfy all the tests which are usually applied to those who are preparing for the Engineering profession.

The foregoing rule will take effect for the first time in 1908.

APPENDICES.

APPENDIX I.

LIST OF DEGREES REFERRED TO IN PARAGRAPH 5.

University of London.—B.Sc. (Engineering).

University of Cambridge.—B.A. (Mechanical Sciences Tripos).

University of St. Andrews.—B.Sc. (Engineering).

University of Glasgow.—B.Sc. (Engineering).

University of Edinburgh.—B Sc. (Engineering).

Victoria University of Manchester (or Victoria University).—B Sc. (with honours in Engineering).

University of Liverpool.—B. Eng. ; provided the degree be obtained by passing the Examinations of the University.

University of Leeds.—B Sc. (with honours in Engineering), in respect of degrees which may be granted on the results of the Examinations in June 1905 or later.

University of Birmingham.—B Sc. (Engineering), provided the Engineering Matriculation Examination be passed on entering upon the course of study.

University of Dublin.—B A I.

Royal University of Ireland.—B.E. and M.E.

University of Wales.—B.Sc. (Engineering) ; provided that Mathematics be passed at the Final Examination for the degree.

Any other degree of a University in the United Kingdom which may hereafter be recognised by the Council of the Institution of Civil Engineers as exempting from passing the examination for Associate Membership.

APPENDIX II.

PARTICULARS REGARDING THE INDIAN PUBLIC WORKS DEPARTMENT, (EXECUTIVE BRANCH).

(The arrangements and salaries hereinafter described are subject to revision according to the requirements of the Service).

1. The Engineer Establishment of the Indian Public Works Department consists of the staff of Engineers, military and civil, engaged on the construction and maintenance of the various public works undertaken by the State in India.

2. The permanent establishment of the Department is recruited from the following sources :—

(1) Officers of Royal Engineers.

(2) Persons appointed to the Imperial Service by the Secretary of State by selection from the United Kingdom.

(3) Persons educated at the Government Civil Engineering Colleges in India, and appointed to the Provincial Services by the Government of India.

(4) Occasional admission of other qualified persons.

3. The various ranks of the Department are as follows :—

	Salary per Annum (Imperial Service). Rs.
Chief Engineers, First Class	33,000
" " Second Class	30,000
Superintending Engineers, First Class	24,000
" " Second Class	21,000
" " Third Class	18,000
Executive Engineers, First Grade	12,000
" " Second Grade	10,200
" " Third Grade	8,400
Assistant Engineers, First Grade	6,600
" " Second Grade	5,400
" " Third Grade	4,200

4. Officers who are finally selected from the United Kingdom for appointment to the Indian Public Works Department will, in the absence of any special reasons to the contrary, be appointed to the rank of Assistant Engineer, Third Grade.

They will cease to draw exchange compensation allowance when they rise to the rank of Superintending Engineer and thereafter, whether permanently or officiating.

5. Promotions from one grade or class to another are dependent on the occurrence of vacancies in the sanctioned establishment, and are regulated in the following way.

6. In the Civil Works Branch of the Department, promotions throughout all grades in Madras and Bombay are made by the Governments of those provinces respectively; in Bengal, the United Peovinces of Agra and Oudh, the Punjab, and Burma, promotions are made by the Provincial Governments, except as regards the appointments of Chief and Superintending Engineer, which are made by the Government of India: in the other provinces * promotions are made by the Government of India on one general list for all these provinces.

7. In the Railway Branch of the Department promotions are made by the Government of India.

8. Promotion is made wholly by selection; mere seniority is considered to confer no claim to it.

PENSIONS AND PROVIDENT FUND.

9. The following is a summary of the principal pension rules applicable to Engineers appointed to the Imperial Service by the Secretary of State from the United Kingdom.

An officer is eligible for a pension on voluntary retirement after completing 20 years' qualifying service or attaining the age of 55 years. If at an earlier date he is compelled to retire from the service through ill-health not occasioned by irregular or intemperate habits, he becomes eligible for an invalid pension or a gratuity according to the length of his service.

The amount of pension or gratuity is regulated as follows :—

After a service of less than 10 years, an invalid gratuity not exceeding one month's emoluments for each completed year of service.

* Eastern Bengal and Assam, Central Provinces (including Berar, Coorg, Rajputana and Central India, and Baluchistan.

After a service of not less than 10 years an invalid pension not exceeding the following amounts :—

Years of Completed Service.	Scale of Pension. Sixtieths of Average Emoluments.*	Maximum Limit of Pension.
10	20	Rs. 1,000 a year or Rs. 83⅓ a month.
11	21	1,400 a year or Rs. 116⅔ a month.
12	22	1,800 a year or Rs. 150 a month.
13	23	2,200 a year or Rs 183⅓ a month.
14	24	2,600 a year or Rs. 216⅔ a month.
15	25	3,000 a year or Rs. 250 a month.
16	26	
17	27	
18	28	
19	29	

After a service of not less than 20 years, a retiring pension not exceeding the following amounts :—

Years of Completed Service.	Scale of Pension. Sixtieths of Average Emoluments.*	Maximum Limit of Pension.
20 to 24	30	Rs. 4,000 a year or Rs 333⅓ a month.
25 and above		5,000 a year or Rs 416⅔ a month.

Officers who have shown special energy and efficiency during an effective service of three years in certain appointments may, at the discretion of the Government of India be allowed an additional pension of Rs. 1,000 a year.

Subject to certain prescribed conditions, rupee pensions are now issued at the rate of exchange of 1*s*. 9*d*. the rupee to pensioners residing in countries in which the Indian Government rupee is not legal tender.

10 A Provident Fund has been established for all Civil Engineers of the Department on the following basis :—

(1) The contribution is compulsory up to 5 per cent. on salaries, with voluntary contributions of a further 5 per cent.

(2) Compound interest on such payments is annually credited by Government to each officer subscribing, the rate being at present 4 per cent. per annum in the case of accounts kept on a rupee basis, and 3 per cent per annum in the case of those kept on a sterling basis Members of the Fund are given the option of having their accounts kept either on a rupee or on a sterling basis.

(3) The sum which thus accumulates to the credit of an officer is his absolute property, subject to the rules of the Fund, and is handed over to him, unconditionally on quitting the Service ; or in the event of his death before retirement, to his legal representatives.

Leave.

11. The following is a summary of the principal regulations relating to the leave admissible to Engineers appointed to the Imperial Service by the Secretary of State from the United Kingdom.

Long Leave.

12. Furlough is admissible to an aggregate amount of six years during the service. The amount " earned " is one-fourth of an officer's active service, and the amount " due " is that amount less any enjoyed.

13. Furlough without medical certificate can, if due, be generally taken after eight years' active service, and again after three years' continuous service. It is limited to two years at a time.

14. Furlough with medical certificate is limited to one year if an officer has not served three years continuously ; otherwise he may have leave up to two years, and it may be extended to a third year.

15. The allowances admissible during furlough are :—

(1) During the first two years of furlough without medical certificate and during so much of furlough with medical certificate as may be "due"—half average salary, subject to certain maximum and minimum limits.

(2) After the expiration of the period for which the foregoing allowances are admissible—one quarter of average salary, subject to certain maximum and minimum limits.

* "Average emoluments" means the average calculated on the last three years' service.

Short Leave.

16. Privilege Leave is a holiday which may be granted to the extent of one eleventh part of the time that an officer has been on duty without interruption; and it may be accumulated up to three months, earned by 33 months' service. During privilege leave, the officer retains a lien on his appointment, and receives the salary which he would have received if on duty. An interval of six months must elapse between two periods of absence on privilege leave.

Privilege leave may be prefixed to furlough, special leave, or extraordinary leave without allowances. The whole period of leave thus taken in combination is known as combined leave. Combined leave (except when consisting of privilege leave and extraordinary leave without allowances) may not be of less duration than six months, nor, except on medical certificate, may it be extendod beyond two years.

17. Special leave may be granted at any time for not more than six months, with intervals of six years' service; allowances, calculated as during furlough, are given during the first six months only, whether taken in one or more instalments. This leave is included in the aggregate of six years' furlough admissible.

18. Extraordinary Leave without allowances may be granted in case of necessity, and, except in certain specified cases, only when no other kind of leave is by rule admissible. It may be granted in continuation of other leave.

19. Subsidiary Leave for a minimum of ten days, usually with half average salary, may be granted to an officer proceeding on or returning from leave out of India, or on retirement, to enable him to reach the port of embarkation or to rejoin his appointment. It is admissible only at the end, and not at the beginning, of combined leave.

20. Short leave is also granted to enable officers to appear at examinations, etc.

General Rules.

21. Leave of absence can never be claimed as of right, and is given or refused at the discretion of Government.

22. After five years' continuous absence from India, an officer is considered to be out of the employment of Government.

23. When leave allowances are paid at the Home Treasury, or in a Colony where the standard of currency is gold, rupees are converted into sterling at the rate of exchange fixed for the time being for the adjustment of financial transactions between the Imperial and Indian Treasuries, unless any other rate has been exceptionally authorised. But for the present the rate of conversion is subject to a minimum of 1*s* 16*d* to the rupee.

For Office use only.
No.
Ackd

INDIAN PUBLIC WORKS DEPARTMENT.

FORM TO BE FILLED UP BY CANDIDATES FOR APPOINTMENT AS ASSISTANT ENGINEER, 1907.

No person will be considered as a Candidate from whom the Secretary, Judicial and Public Department, India Office, Whitehall, London, S.W., shall not have received, on or before Wednesday the 1st May 1907 *at latest, an application on this form.*

The Application Form should not, however, be sent to him before the 1st March 1907.

If Candidates who fill up and return the Application Form do not receive an acknowledgment of it within four complete days, they should communicate with the Secretary, Judicial and Public Department.

INDIA OFFICE,
18th July 1906.

1	Name in full.
2	Address (*Any alteration to be notified to the Secretary, Judicial and Public Department, India Office, Whitehall, London, S.W.*)
3	Date of Birth (*In the event of the Candidate's selection, he will be required to produce a Birth Certificate or such other evidence as to date of birth as may be considered satisfactory.*)
4	Profession or occupation of father; and whether at the time of the Candidate's birth his father was a British subject, either natural-born or naturalised in the United Kingdom.
5	(*a*) Parentage of father, showing that he was of European descent. (*b*) Parentage of mother, showing that she was of European descent.

6	The names of any near relatives who have been, or are now, in the service of the Indian Government, and the appointments at present, or immediately before retirement or decease, held by them.
7	All Institutions where educated, since the age of 15, with dates, distinguishing whether or not the Candidate was in residence at such Institutions. *From* *to* *at* *From* *to* *at* *From* *to* *at* *From* *to* *at*
8	University degree, diploma, or other distinction in Engineering, with name of Institution at which obtained.
9	Details as to any Prizes, University Honours, etc.
10	Experience in the preparation of designs for or in the execution of some Engineering work of importance, stating with whom obtained, with dates and addresses.
11	Whether married or single.

12	Names and addresses of persons (not more than three, of whom at least one should be connected with the Institution at which the candidate has studied Engineering) who will testify (if applied to) as to conduct and character during the last four years. (*References will not be accepted from persons who are related to the candidate or have no personal knowledge of the candidate.*)
13	Whether the candidate has in any previous year applied for appointment to the Public Works Department.

GAZETTE OF INDIA.

NOTICE.

The 25th October 1906.

From the 10th November next till further notice, the complete *Gazette of India* will be published at Calcutta. After the 3rd November all notifications and other matter intended for publication in the *Gazette* should be addressed to the Publisher, 8, Hastings Street, Calcutta.

Attention is invited to the following Circular Memorandum of the Government of India, Home Department, of August 1901:—

"It has been brought to the notice of this Department that matter for the *Gazette of India* is sometimes sent to the Press late on Friday evenings for publication in the next day's *Gazette*, and that this involves considerable inconvenience to the Press and expense to Government. In the Circular Memorandum of this Department, No. 777—79, dated 9th February 1870, the Government of India directed that all notifications or other matter intended for insertion in the *Gazette of India* should be delivered at the Press not later than 2 P.M. on Friday, and that any papers sent thereafter must be certified to be extremely urgent in order to ensure their appearance in the next day's *Gazette*. The undersigned is directed to request that these orders may be more strictly observed in future, and that Departments will refrain from sending to the Press as extremely urgent any papers which can without harm or inconvenience be held over for the next *Gazette*."

J. P. HEWETT,
Secretary to the Government of India.

NOTIFICATIONS.

No. 4902 P.—APPLICATIONS in respect of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act during the week ending 10th December 1906:—

No. 600 of 1906.—James Robinson Hatmaker, gentleman, of No. 25 Rue de la Faisanderie, Paris, France. *Cacao, sugar and milk compound in dry flaky form.*

No. 601 of 1906.—Edward Lennon Cantwell, consulting engineer and patent agent, 14 Lindsay street, Calcutta. *An improved method of covering roofs with sheet iron, galvanised or otherwise, or other sheet metal, whether the sheets be plain or corrugated.*

No. 602 of 1906.—Cankala Kristnasawmi Veerasawmi Naidoo, Secretary, Universal Benefit Society, Limited, and Manager of the Swadesi Steel Trunk Manufacturing Company, of Negapatam, residing at No. 21 Holland street, Negapatam, Madras Presidency, British India. *Improvements in brief bags or carriers for legal and other documents and sundry articles.*

No. 603 of 1906.—Michael Reginald Kirkman Hodgson, Lieutenant, in His Majesty's Regiment of Royal Fusiliers, now stationed at Trimulgherry, in the Deccan, in the Empire of India. *An attachment of horse rugs.*

No. 604 of 1906.—William Charles Viney Harwood, merchant, and Samuel Reed, mechanic, both of 25 Victoria street, Westminster, London, England. *An improved apparatus for automatically supplying liquid disinfectant to flushing cisterns or the like.*

No. 605 of 1906.—Harry Wilson Elliott, mechanical engineer, of Prescott, Territory of Arizona, United States of America. *Improvements in lubricating systems.*

No. 606 of 1906.—Thomas Mitchell, merchant, of 19 Queen street, East, and Joseph Hodgson, financial agent, of 40 McGill street, both in Toronto, Ontario, in the Dominion of Canada. *Improvements in sights for rifles.*

No. 4903 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, United Provinces of Agra and Oudh. These and other specifications are open to public inspection from 11 A.M. to 3 P.M. at the Secretary's office, 2 Bankshall Street, Calcutta, on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 164 of 1906.—Charles Matthews Manly, mechanical engineer, a citizen of the United States and residing at 449 Twelfth street, Brooklyn, New York, United States of America. *Variable speed gear.* (Specification filed 27 November 1906.)

No. 236 of 1906.—Alwin Hugo Eusebius Fischer, plumber, of 78 O'Connell street, North Adelaide, in the state of South Australia, commonwealth of Australia. *An improved water-jacket for water-heaters or the flues thereof.* (Specification filed 27 November 1906.)

No. 274 of 1906.—Frederick Robert Jones, engineer, at present residing at "Bantony" Simla. *An improved mill for grinding corn or other like substances to be called "The Kaisar-i-Hind Mill."* (Specification filed 3 September 1906.)

No. 390 of 1906.—William Tice, engineer, in the employ of Messrs. Bird & Company, of 101-1 Clive street, Calcutta, British India. *Improvements in sanitary carts for nightsoil and the like.* (Specification filed 31 October 1906.)

No. 398 of 1906.—David Cardew, Assistant Locomotive Superintendent, E. B. S. Railway, Calcutta. *A dash ring for the journals of railway vehicles.* (Specification filed 9 November 1906.)

No. 448 of 1906.—Dr. V. K. Kirloskar, and V. K. Tembe, both of Sholapur. *An improved bath boiler.* (Specification filed 16 November 1906.)

No. 494 of 1906.—Karl Friedrich Philipp Stendebach, engineer, of 5 Weinligstrasse, Leipzig-Gohlis, Germany. *Improvements in projectiles for smooth-bore fire-arms.* (Specification filed 15 November 1906.)

No. 516 of 1906.—Charles Butters, metallurgist, of 28 Bishopsgate Street Within, London, England. *Process and apparatus for filtering slimes.* (Specification filed 30 November 1906.)

No. 523 of 1906.—Francis Lawrence Lane, engineer, and the Leeds Forge Company Limited, engineers, of the Leeds Forge, Leeds, in the county of York, England. *Improvements in wagon doors.* (Specification filed 30 November 1906.)

No. 526 of 1906.—Karl August Brauning, technician, of 11 Anna Paulownastraat, Zaandam, Province of North Holland, in the kingdom of the Netherlands. *Improvements in and connected with magazine fire-arms.* (Specification filed 29 November 1906.)

No. 527 of 1905.—Hugh Inglis, chief clerk, Burnfoot, Cardross, Dumbartonshire, Scotland, and William Liddle, engineer, Kipps Cottage, Coatbridge, Lanarkshire, Scotland. *Improvements in spark arresters for locomotives* (Specification filed 29 November 1906.)

No. 530 of 1906.—Joseph Melland-Smith, civil engineer, of No. 34 Old Broad street, in the city of London, England. *Improvements in couplings for railway and other vehicles.* (Specification filed 29 November 1906.)

No. 4904 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 260 of 1894.—Freidrich Hermann Schule. *A new or improved machine for sorting cereals and removing stones and grit therefrom.* (From 17 December 1906 to 17 December 1907.)

No. 433 of 1899.—Charles Felton Scott. *Improvements in systems of electrical distribution.* (From 15 January 1907 to 15 January 1908.)

No. 150 of 1900.—Jahar Lal Dhar and Krishna Chandra Dass. *An ærated water machine.* (From 18 December 1906 to 18 December 1907.)

No. 152 of 1900.—Alexander Muirhead. *Improvements in telegraphic transmitting, receiving and translating arrangements.* (From 14 December 1906 to 14 December 1907.)

No. 230 of 1900.—Joseph Henry Cunliffe, John Law, John Hanson, James Butterworth, Simeon Butterworth, James Makin and John Howarth Pilling. *A method of and an apparatus for weaving bordered fabrics.* (From 14 December 1906 to 14 December 1907.)

No. 197 of 1901.—The American Cigar Machinery Company. *Improvements in cigar making machinery.* (From 3 December 1906 to 3 December 1907.)

No. 173 of 1902.—Christopher Rawson. *Improvements in indigo manufacture.* (From 10 December 1906 to 10 December 1907.)

No. 177 of 1902.—Ludwig Mond. *Improvements in producing explodible gases from coal and other fuels in gas producers for use in gas engines and utilising the exhaust gases from the gas engines for improving the working of the gas producers.* (From 10 December 1906 to 10 December 1907.)

No. 178 of 1902.—Alfred Zellweger. *Improvements in and connected with electric punka-motors.* (From 10 December 1906 to 10 December 1907.)

No. 196 of 1902.—Atmospheric Products Company. *The manufacture of nitrogen compounds from atmospheric nitrogen.* (From 19 December 1906 to 19 December 1907.)

No. 445 of 1902.—William Vivian and James Vivian. *Improvements in partially rotating valves for fluid pressure engines.* (From 18 December 1906 to 18 December 1907.)

No. 4905 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2), of the said Act the exclusive privilege of making, selling, and using the said inventions in British India, and of authorising others so to do, has ceased —

No. 83 of 1901.—Duncan Finlayson Macdonald *Improvements in derricks and cranes specially applicable to steamers and ships.* (Specification filed 3 September 1901.)

Fee in respect of the continuance of an exclusive privilege—

4 (*b*) After the expiration of the fourth year and before the expiration of the fifth year from the date of the filing of the specification—

The sum of R50 for the above invention.

No 113 of 1900.—Heinrich Spuhl *An electric punka-motor.* (Specification filed 4 September 1900)

Fee in respect of the continuance of an exclusive privilege—

4 (*c*) After the expiration of the fifth year and before the expiration of the sixth year from the date of the filing of the specification—

The sum of R50 for the above invention.

No 440 of 1898.—William Henry Drury. *Improvements in the manufacture of yarns and apparatus therefor* (Specification filed 1 September 1899.)

No. 441 of 1898.—William Henry Drury. *Improvements in machinery for the manufacture of yarns from fibrous materials.* (Specification filed 1 September 1899.)

Fee in respect of the continuance of an exclusive privilege—

4 (*d*) After the expiration of the sixth year and before the expiration of the seventh year from the date of the filing of the specification—

The sum of R50 for each of the above inventions.

No. 192 of 1894.—Sidney Straker and The Central Cyclone Company, Limited. *Improvements in machines for grinding, crushing, or disintegrating grain and other materials.* (Specification filed 3 September 1894.)

Fee in respect of the continuance of an exclusive privilege—

4 (*i*) After the expiration of the eleventh year and before the expiration of the twelfth year from the date of the filing of the specification—

The sum of R100 for the above invention

NOTICES

All communications relating to applications for leave to file specifications and for registration of designs under the Inventions and Designs Act, 1888 (V of 1888), or in continuation of such applications, should be addressed to the Patents Secretary, 2, Bankshall Street, Calcutta.

The Office of the Secretary under the Inventions and Designs Act, 1888, will in future be open for the transaction of business from 11 A.M. to 3 P.M. on all days, except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques

Cheques and money orders will only be accepted if made payable *at Calcutta* to the Secretary under the Inventions and Designs Act

Copies of the weekly notifications, and of the quarterly lists of applications and specifications filed in the Secretary's Office are now on sale to the public at one anna and eight annas a copy, respectively A consolidated index for the year 1905, entitled "Inventions and Designs in 1905," is also on sale, price one rupee It contains a chronological list, subject-matter and name indexes of exclusive privileges for inventions, which have been obtained or applied for in that year, together with lists of designs applications

Attention is requested to the rules made by the Government on the 10th October 1895 in regard to the preparation of applications, specifications and drawings

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitors' room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified. or, if the 10th day is a holiday, till the evening of the office day next following

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

The Inventions and Designs Act (V of 1888), with the notifications and rules issued under its provisions and the notices of the office of Inventions and Designs, to which is added an explanatory memorandum for the guidance of persons applying for protection of Inventions and Designs Royal 8vo. volumes, paper cover, 13 annas or 1s. 1*d*. Postage extra To be had of the Superintendent Government Printing, 8, Hastings Street, Calcutta, or of the Superintendent, Patents Branch, Department of Commerce and Industry, 2, Bankshall Street, Calcutta.

The Patents Office will be closed to the public from 3 P M, 22nd December 1906, to 11 A.M., 2nd January 1907.

H. G GRAVES,
Secretary under the Inventions and Designs Act V of 188

C. STEWART-WILSON,
Director General of the Post Office of India,

ORDERS BY THE HONOURABLE THE CHIEF COMMISSIONER OF AJMER-MERWARA.

NOTIFICATION.

A. G. G.'s Camp, Rajputana, the 9th December 1906.

No. 1371-C.—19.—The following rules relating to the management of Nazul properties in Ajmer-Merwara have been approved by the Local Government and they are now hereby published for general information.

Rules relating to the Management of Nazul Properties in Ajmer-Merwara.

[DEFINITION OF NAZUL.]

1. For the purposes of these rules, Nazul means any land or building which, being the property of the Government, is not administered as a State property under the control of the Chief Commissioner of Ajmer-Merwara or the Forest Department, or is not under the control of the Military, Postal, Telegraph, Public Works or other purely Imperial Departments. Nazul thus embraces all immoveable Government property managed by any Provincial Department or of which the management has been made over to a local body, but does not include property under the management of the Chief Commissioner or the Forest Department.

[RECORD OF NAZUL].

2. All Nazul property shall be registered by the Revenue Extra Assistant Commissioner, Ajmer-Merwara, in Form No. I attached (Appendix A) and in the following arrangement:—

Volume I.—Register of lands and buildings [except railway appropriations and other lands (not being roads) for which separate registers are departmentally maintained] owned or used by the Government for administrative purposes, *e.g.*, court houses, jails, tehsils, cemeteries, encamping grounds, etc.:—

A—Lands with buildings attached.

B—Provincial roads.

C—Other plots.

Volume II.—Register of other Nazul:—

(*a*) INTRA-MUNICIPAL.

A—Lands with buildings attached.

B—Building sites.

C—Roads (other than provincial) specially reserved by the Government.

D—Other plots.

(*b*) EXTRA-MUNICIPAL.

A—Lands with buildings attached.

B—Local roads.

C—Other plots.

NOTES.—(*i*) In Volume I and Volume II (*b*) the plots shall be grouped together by villages, suitable number of pages being allowed for each village. In Volume II (*a*) the grouping shall be by Municipalities. If the lands of more than one village are included within the limit of a Municipality, the name of the village to which each plot belongs will be shown in column (1).

(*ii*) To Volumes I and II shall be appended an abstract of the road entries, showing the description of each road, its total length and the villages through which it passes. The form of this abstract will be prescribed by the Chief Commissioner, Ajmer-Merwara.

(*iii*) The right-hand page of the above registers is intended for a plan of the plots, which would ordinarily take the form of a tracing of part of the Settlement Map. But where the plots are numerous or widely scattered, a complete tracing of the map should be made with the plots marked with some distinctive colour. Similarly in Municipal areas it may be desirable to have a map of the whole area with the Nazul plots specially marked. Where necessary these maps would be on a larger scale than the village maps. All such large maps should be kept in a separate portfolio and numbered serially, a reference to the number of the map being given on the right-hand page of the register.

3 The authority, whether Government or local, entrusted with the management of Nazul shall maintain a register in Form II attached (Appendix B). This register shall be compared annually with the registers maintained under rule (2).

[CONTROL AND MANAGEMENT OF NAZUL.]

4 Nazul entered in Volume I of the register described in rule (2) shall be managed by the department which would ordinarily control the property: Jails by the Jail Department, Tehsils by the Collector, etc.

5. The control of Nazul entered in Volume II of the register described in rule (2) shall rest primarily in the Collector, but the immediate management shall ordinarily be entrusted as provided in the next three rules.

6. Intra-municipal Nazul shall be managed by the Municipal Committee concerned.

Note—If any intra-municipal nazul is occupied by the District Board, e g, as the site of a school or dispensary, it should ordinarily be leased to the District Board for a long term at a nominal rent.

7 Extra-Municipal Nazul shall be managed by the District Board.

8. Notwithstanding anything contained in these rules, no building or remains of archæological or historical interest shall be put under the management of a Municipal or District Board, they shall remain under the direct management of the Chief Commissioner.

9 The placing of the management of Nazul under a local body is subject to the condition that the property shall be liable to resumption at any time by the Chief Commissioner with the previous sanction of the Government of India on such terms as the Government may decide.

[TREATMENT OF EXTRA-MUNICIPAL NAZUL]

10 Extra-Municipal Nazul shall not be transferred otherwise than by lease, except with the previous sanction of the Local Administration Leases may be given under the following conditions —

(i) Where the Nazul is under the management of the District Board, the terms of the lease shall be agreed to at a meeting of the Board, and shall be reported for the approval of the Commissioner

(ii) The lease shall be subject to the approval of the Chief Commissioner if its terms exceed one year.

[TREATMENT OF INTRA-MUNICIPAL NAZUL]

11. The sales of any land under these rules shall be under the orders of the Municipal Committee, and shall ordinarily be by public auction. The Committee may, for reasons to be recorded, refuse to accept the highest offer, or they may, after recording reasons, sell the land otherwise than by auction When a plot is sold no rent shall be reserved.

12. Leases for building purposes shall be of two classes —

(*a*) a perpetual lease with a premium paid and an annual rent reserved.

(*b*) a terminable lease with no premium but an annual rent reserved.

When a plot is to be leased, the Municipal Committee shall determine, with regard to the wishes of the person applying for the lease, to the probable rise in the value of the land and to the other circumstances of the case, whether the lease shall be a perpetual or a terminable one.

13. The method of granting a perpetual lease shall be as follows —

(i) The plot shall be assessed to rent which shall be taken instead of land-revenue and local rates on the plot. The rent shall ordinarily be 10 per cent. in excess of the highest rate at which land-revenue is assessed on similar and similarly situated lands, under ordinary tillage in the neighbourhood, subject to the condition that it shall not ordinarily exceed 33 per cent. of the letting value of the site for building purposes. The rent shall be subject to revision, at intervals of not more than 30 years. The enhancement of rent (if any) at revision shall not exceed 50 per cent the precise rate within that limit depending on the development of rent in the locality and the probability of a rise in the value of land.

(ii) The Municipality shall declare the rent assessed on the plot and give notice of their intention to sell the lease They shall either invite tenders for the premium to be paid, or put up the leases to auction the person offering the highest premium being ordinarily accepted as the lessee The lessee, his heirs and successors shall not, however, be dispossessed after 90 years provided he or they wish to continue as lessee or lessees for a further period of 90 years and provided always that he or they agree to pay a rent higher than the highest offer made at the period of renewal or than the rent assessed under Rule 13 (ii) above The Municipality may, for reasons to be recorded, refuse to accept the highest or any offer.

14. When a terminable lease is given, it shall not ordinarily be for a period of less than 3 or more than 30 years at the option of the lessee, and shall provide for renewals at a moderate enhancement of rent for further periods of from 3 to 30 years up to a minimum aggregate period of 90 years, provided always that the lessee, his heirs and successors agree to pay a rent higher than the highest offer made at the period of assessment which shall take place on the termination of the lease.

The rent shall in no case be less than the highest rate at which land-revenue is assessed on similar and similarly situated lands, under ordinary tillage in the neighbourhood. Subject to this minimum the Municipal Committee shall assess such rent as may appear proper with regard to the circumstances of each plot, or he may put the lease up to auction.

15. The rent fixed under rule 13 (1) or 14 may be capitalized by payment of 30 times the annual amount, which will be deposited in the Government Post Office Savings Bank.

16. No plots shall be sold or leased by the Municipal Committee without the sanction of the Chief Commissioner. Plots of land exceeding 2,500 square feet in size or R300 in sale value shall not, as a rule, be sold but shall only be leased. The Chief Commissioner may relax the rule in any exceptional cases.

[CREDIT OF THE PROCEEDS OF THE NAZUL.]

17. In return for the labour and expense of management (which shall include the cost of litigation) the District Board or Municipal Board entrusted with the management of Nazul shall receive the gross annual income accruing therefrom. The sale-proceeds and the premia of leases shall be credited in full to the said Boards subject to the condition that such proceeds being of the nature of capital shall be invested in works of permanent improvement or in the reduction of debt.

[NAZUL REPORTS.]

18. The various Municipal Committees and the District Board entrusted with the management of Nazul, shall embody in their annual reports a brief history of the administration of the property during the previous financial year. The report shall be accompanied by a statement of income and expenditure in the form attached (Appendix C).

[MISCELLANEOUS.]

19. When under these rules the sanction of any superior authority is required to the sale or lease of Nazul, whether extra or intra-Municipal, the application shall be submitted to the District Magistrate in the attached form (Appendix D) in duplicate, or when the Chief Commissioner's sanction is required, in triplicate.

20. Deeds of sale and lease shall be executed in the attached forms (Appendix E and F).

21. When it is proposed to sell or lease any Nazul land in the vicinity of a railway station, the Railway administration shall be consulted before orders are passed or sanction is applied for.

APPENDIX E.

DRAFT OF CONVEYANCE.

Form proposed.—

Indenture made this day of between the Municipal Committee of District Board, Ajmer-Merwara, (hereinafter called the Committee/Board) of the one part and (hereinafter called the purchaser) of the other part.

Reasons for any modification, change, etc.

Whereas under the rules relating to the management of Nazul properties in Ajmer-Merwara the plot of land (building known by the name hereinafter described) was on the day of 190 , put up by the Committee/Board for sale by public auction and at such auction was sold to the purchaser for the sum of R subject to the conditions hereinafter expressed.

This paragraph to be used if the sale was by auction.

Whereas the Committee/Board have agreed with the purchaser for the sale to him of the *plot of land hereinafter described for the purpose of building a dwelling house (or as agreed) thereon* and subject to the conditions hereinafter expressed.

This paragraph to be used if the sale was private treaty. When a building is sold the words "building known by the name of" will be substituted for the words in italics.

And whereas the said sale has been confirmed by the Local Government (or by the Government of India) as required by the rules under letter No. dated from the to

Now this Indenture witnesseth that for the purpose of effectuating the said sale and in consideration of the sum of R paid by the purchaser to the Committee/Board the receipt whereof the Committee/Board doth hereby acknowledge and also in consideration of the covenants hereinafter contained on the part of the purchaser to be observed and performed the Committee/Board hereby grant unto the purchase all that building of/plot land containing by admeasurement situate at in the Municipality of in the District of which said plot of land/building is more particularly described in the Schedule hereunder written and with the boundaries thereof together with all ways drains rights easements and appurtenances whatsoever to the said belonging or in anywise appertaining. To have and to hold the said hereby granted unto the purchaser to the use of the purchaser for ever and the purchaser doth hereby covenant with the Committee/Board that he the purchaser will within calendar months next after the date of these present at his expense erect and complete on the plot of land hereby granted a dwelling-houses (or as agreed) according to a plan and elevation to be approved in writing by the Committee/Board and also that no part of the external elevation or plan of the said dwelling-house (or as agreed) to be built as aforesaid shall at any time be altered or varied from the original elevation or plan thereof without the written consent of the said Committee/Board and no other building shall be erected on the said plot of land and premises without the like consent and also that the purchaser shall not nor will at any time carry on or permit to be carried on upon the said premises any trade or business whatsoever or use the same for any purpose other than as a private dwelling-house without the consent in writing of the said Committee/Board first had and obtained. Provided always and these presents are executed on this express condition that if there shall be a breach on the part of the purchaser of all or any of the covenants on his part to be observed and performed then and in every such case and notwithstanding the waiver of any previous right of re-entry it shall be lawful for the Committee/Board into and upon the said plot of land and premises hereby granted and any buildings which may be erected thereon or any part thereof in the name of the whole to re-enter and the purchaser and all occupiers of the same premises to expel therefrom and thereupon the said land and premises hereby granted and all buildings erected thereon shall remain to the use of and be vested in the Committee/Board Provided nevertheless that such right of re-entry shall not be exercised or put into force by the Committee/Board unless and until they shall have given to the purchaser or left upon the premises hereby granted notice in writing to make good such default and all costs damages and expenses incurred as aforesaid and the purchaser shall fail to do so for three calendar months after such notice.

Provided also that the expressions "Committee/Board" and the "purchaser" hereinbefore used shall unless such an interpretation be inconsistent with the context include in the case of the former the Committee/Board or their successors in office and assigns and in the case of the latter his heirs executors administrators representatives and assigns.

In witness whereof the parties have hereto set their hands the day and year first above written.

The Schedule above referred to

APPENDIX F.

DRAFT OF LEASE.

Reasons for any modification, change, etc.

Form proposed. (Draft form of lease).—

This indenture made the day of 190 between the Municipal Committee/District Board hereinafter called the Committee/Board of the one part and son of inhabitant of (hereinafter called the lessee) of the other part

Whereas the lessee has applied for the lease of and the Committee/Board have agreed to demise to him a plot of land for the purpose of building a house (1) for the term and the conditions hereinafter appearing Now this indenture witnesseth that in consideration of the rent hereinafter reserved and of the covenants hereinafter contained the Committee/Board hereby demise to the lessee all that plot of land situate in in the Municipality/District of containing by admeasurement square yards or thereabouts, delineated in the plan attached to these presents and more particularly described in the first schedule hereto.

To hold the premises hereby demised unto the lessee for the term of years, from the day of 190 , yielding and paying therefor the yearly rent set out in the second schedule such yearly rent to be paid annually on the day of in every year (the first of such payment being due on the day of 190) at the office of the or at such other places as the Municipality/Board may from time to time prescribe or paying in lieu of the annual rent the capitalized sum of R to be deposited by the lessors in the Post Office Savings Bank the interest thereof to be credited to the Municipal/District Board accounts as payments of the annual rent

It is hereby agreed and declared that these presents shall be read and construed as if all the liabilities to which a lessor and a lessee are respectively declared to be subject by section 106 of the Transfer of Property Act, 1882, with the exception of clause (8) ? of that section (namely the prohibition to erect a permanent structure) were covenants to that effect contained herein on the part of the Municipality/Board and of the lessee. And the lessee also covenants with the Committee/Board that he will pay all taxes rates or assessments that may from time to time be levied by lawful authority on the land hereby demised or on the building now or hereafter to be erected thereon and that notwithstanding that this lease is in perpetuity/if this lease is renewed under the covenant the hereinafter contained yearly sum payable as rent shall at the discretion of the Committee/Board be subject to revision on the expiration of every thirty years/on the occasion of each such renewal*

Provided that the yearly sum so assessed on revision shall not exceed 33 per centum of the annual letting value of the site.

Provided always that if any part of the rent hereby reserved shall be in arrear for 30 days whether the same shall have been legally demanded or not or if and whenever time shall be a breach of any of the covenants hereinbefore contained on the part of the lessee the Committee/Board or any person authorized by them in this behalf may re-enter upon any part of the said premises or the whole in their name and thereupon this lease shall absolutely determine and the lessee shall not be entitled to remove any structure that may have been erected on the said premises or to claim any compensation whatsoever in respect of such re-entry and the Committee/Board hereby covenant with the lessee that if the lessee shall desire to take renewal lease of the said premises for the further term of years from the expiration of the term hereby granted, and shall prior to the expiration of the said term give months' previous notice in writing of such desire and shall pay the rent reserved by and perform the covenants by the lessee contained in these presents up to the expiration of the term hereby granted the Committee/Board will at the cost of the lessee (upon payments of R by way of premium) demise to him the said premise for a further term of years subject to the same covenants and provisos as are herein contained

Provided always that on a second such renewal this present covenant shall cease to have any further effect.

Provided further that unless such an interpretation is inconsistent with the context the expression—Committee/Board— heretofore used shall include the Committee/Board or their successors in office and assigns and the expression the "lessee" shall include his heirs executors administrators and assigns.

Remarks by the Administrative Medical Officer, North-West Frontier Province

Six thousand three hundred and nine births were registered in the Province during the month of October 1906, giving a birth-rate of 37 *per mille* of population. Of the total number of births, 3,425 were boys and 2,884 girls.

The total number of deaths registered from all causes in the Province during the month of October 1906 was 6,181 against 5,187 in the previous month, and 3,817 in the corresponding month of the past year, giving an annual death-rate of 37, 32 and 23 *per mille* of population per annum, respectively.

There was not a single death registered under the head of cholera.

From small-pox 33 deaths were registered against 90 in the previous month and 26 in the corresponding month of the past year.

There was not a single death registered from plague.

From fevers 5,056 deaths were registered against 3,872 in the previous month and 2,825 in the corresponding month of the last year, dysentery and diarrhœa 45 against 57, respiratory disease 97 against 104, suicide *nil* against 2, wounding 8 against 11, accidents 28 against 78, snake-bite and killed by wild beasts 7 against 5, and from all other causes 907 against 908 in the past month and 655 in the corresponding month of the last year.

G. W. P. DENNYS, Lt.-Col., I.M.S.,

EDUCATIONAL DEPARTMENT.

NOTIFICATION.

The 21st September 1906.

No. 822-XV-275-6—Whereas the Lieutenant-Governor is satisfied, by an enquiry held under section 40 of the Land Acquisition Act, 1894 (I of 1894), that the acquisition of the land more particularly delineated in the Schedule annexed to the Agreement hereinafter set forth is needed by a company registered under the Societies Registration Act, 1860 (XXI of 1860), under the name of the Muhammadan Anglo-Oriental College, Aligarh Association, for the expansion of an educational institution known as the Muhammadan Anglo-Oriental College and that such expansion of the College is likely to prove useful to the public:

And whereas, upon such a report as is referred to in section 41 of the said Land Acquisition Act, 1894, he has required the said Company to enter into an Agreement with the Secretary of State for India in Council and the Agreement hereinafter set forth has been executed accordingly:

Now, under and by virtue of the power conferred by section 42 and with reference to the provisions of section 39 of the said Land Acquisition Act, 1894, the Lieutenant-Governor is pleased to publish the Agreement so set forth for the information of all persons likely to be affected thereby.

By order, etc.,
E. F. L. WINTER,
Secretary.

An Agreement entered into this 21st day of September 1906, between the Secretary of State for India in Council (hereafter called the Secretary of State) on the one part and the Muhammadan Anglo-Oriental College, Aligarh Association, a company registered under the Societies Registration Act XXI of 1860, on the other part.

Whereas the aforesaid Muhammadan Anglo-Oriental College, Aligarh Association, has made an application to the Government of the United Provinces of Agra and Oudh to acquire, under the provisions of the Land Acquisition Act (I of 1894) land situated in Mauza Bhambola, District Aligarh, for the purposes of such company amounting to two hundred and thirteen bighas and two biswas (213 bighas, 2 biswas) or thereabouts as detailed and described in the Schedule annexed hereto, and for the sake of greater clearness delineated or shown on the plan hereto annexed and thereon with its boundaries coloured red.

And whereas the aforesaid Local Government is satisfied that the said Muhammadan Anglo-Oriental College, Aligarh Association, is a company within the meaning of section 3 (*e*) of the aforesaid Land Acquisition Act of 1894 (as per certificate of the Registrar of Joint Stock Companies, dated 22nd, January 1890).

And whereas the aforesaid Local Government after making and holding such enquiry as is required and prescribed by law is satisfied that the acquisition of the aforesaid land required by the Muhammadan Anglo-Oriental College, Aligarh Association, is needed for the construction of some work and that such work is likely to prove useful to the public.

And whereas under section 41 of the aforesaid Land Acquisition Act of 1894, the Muhammadan Anglo-Oriental College, Aligarh Association is required to enter into an Agreement with the Secretary of State for India in Council, regarding matters laid down in the aforesaid Section 41 of the said Act.

It is hereby agreed and declared as follows :—

I. That the aforesaid Muhammadan Anglo-Oriental College Aligarh Association, wil pay to the Local Government of the United Provinces of Agra and Oudh or to such person (or persons) whom the Local Government may appoint in this behalf, all such sum or sums of money as shall be awarded under the provisions of the aforesaid Land Acquisition Act of 1894 as compensation to any person or persons who may be found on enquiry held under the provisions of the said Act, to be interested in the land hereinbefore mentioned as required by the Muhammadan Anglo-Oriental College, Aligarh Association.

2. That the Muhammadan Anglo-Oriental College, Aligarh Association, will defray and pay to the Local Government from its funds, the charges of and incidental to, and the cost of the acquisition of the aforesaid land under the provisions of the Land Acquisition Act of 1894.

3. That upon the Muhammadan Anglo-Oriental College, Aligarh Association, having made the payments mentioned in the foregoing paragraphs Nos. 1 and 2 of this Agreement,

the Local Government will forthwith in consideration of the repayment of the compensation money and cost of acquisition aforesaid, convey and grant to the Muhammadan Anglo-Oriental College, Aligarh Association, all those aforesaid pieces of land containing by admeasurement two hundred and thirteen bighas, and two biswas situated in Mauza Bhambola, District Aligarh, and described and shown in the Schedule and plan annexed hereunto, free from all encumbrances and occupancy rights together with all rights, easements and appurtenances thereto, in fact or by reputation belonging or now or heretofore enjoyed therewith, to hold the land unto and to the use of the Muhammadan Anglo-Oriental College Aligarh Association.

4. That the Muhammadan Anglo-Oriental College, Aligarh Association, will perpetually hold and enjoy the aforesaid land and use the said land for the purposes hereby agreed upon.

5. That the Muhammadan Anglo-Oriental College, Aligarh Association, will use the aforesaid land for the purposes of erecting new buildings on the aforesaid land, as Boarding Houses for students of the aforesaid Muhammadan Anglo-Oriental College, as dwellings and quarters for professors, lecturers, teachers, clerks, menials and servants, of constructing scientific laboratories and observatories and gymnasia and any other buildings which may be required for the Muhammadan Anglo-Oriental College or Muhammadan Anglo-Oriental Collegiate School which is affiliated therewith, of providing for a future new building for classes for students and lecture rooms for professors and like purposes, of providing for play-grounds for the students of the Muhammadan Anglo-Oriental College or Muhammadan Anglo-Oriental Collegiate School aforesaid, and of keeping the College and School aforesaid free from insanitary or otherwise undesirable surrounding.

6. That the Muhammadan Anglo-Oriental College, Aligarh Association, shall have plenary power of discretion to demolish, add to, extend, alter, or repair any buildings which may be now in existence or may be erected in future upon the aforesaid land, and to erect and construct any new buildings and to cut down or plant trees shrubs and hedges and to lay out gardens or lawns, and to dig wells or make other excavations and fill up ditches or wells and lay water pipes and to build or pull down huts and farm-houses and do all other things upon the aforesaid land at any time for the purposes mentioned in paragraph 5 of this agreement.

7. That the Muhammadan Anglo-Oriental College, Aligarh Association, will allow the public to have the full right and liberty to utilize the aforesaid institutions, known as the Muhammadan Anglo-Oriental College and Muhammadan Anglo-Oriental Collegiate School and Boarding Houses and play-grounds and other accessories and appurtenances that shall be attached thereto, by having their sons and wards admitted as students and scholars of the aforesaid institutions according to its rules and regulations and subject to the payment of such fees and the observance of such rules and regulations on the part of the students and scholars and their guardians as are or shall be, for the time being fixed and framed by the said Muhammadan Anglo-Oriental College, Aligarh Association, or such person or persons as the Muhammadan Anglo-Oriental College, Aligarh Association, shall appoint on their behalf or by any higher authority to whom the Muhammadan Anglo-Oriental College, Aligarh Association, is or may be hereafter, by law subject.

In witness whereof the parties hereto have hereto set their hands the day and year first above written.

MAHDEE ALLY,
Honorary Secretary to the M. A.-O. College, Aligarh Association,

20th June 1906.

Certified that annas 8 eight only having been realized as stamp duty in respect of this agreement from the College Association, this document is now a properly stamped one under Article 5 (*a*), Schedule I of the Stamp Act (II of 1889).

G. C. W. INGRAM,
Collector.

Signed, sealed and delivered by Edgar Francis Latimer Winter, I. C. S., Secretary to the Government of the United Provinces of Agra and Oudh in the Educational Department, for and on behalf of His Honour the Lieutenant-Governor of the United Provinces of Agra and Oudh acting in the premises for and on behalf of the Secretary of State for India in Council in the presence of—

PART V.

Bills introduced in the Council of the Governor General of India for making Laws and Regulations, Reports of Select Committees presented to the Council, and Bills published under Rule 23.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Bill was introduced in the Council of the Governor General of India for the purpose of making Laws and Regulations on the 14th December, 1906 :—

No. 7 of 1906.

A Bill to repeal and amend certain Enactments relating to abolished rates and cesses.

WHEREAS certain rates and cesses leviable in the territories specified in the Schedule have been abolished and it is therefore expedient to repeal or amend the enactments specified in the said Schedule ; It is hereby enacted as follows :—

Short title.

1. This Act may be called the Repealing and Amending (Rates and Cesses) Act, 190 .

Enactments in Schedule repealed or modified.

2. The enactments specified in the Schedule shall be repealed or modified to the extent and in the manner mentioned in the third column thereof.

THE SCHEDULE.

Number, year and short title.	Sections.	Extent of repeal or modification.
A.—The Presidency of Madras.		
Madras Act IV of 1893 (The Madras Village Cess Act, 1893).	...	The whole Act to be repealed.
Madras Act III of 1895 (The Madras Hereditary Village-offices Act, 1895).	3	For clause (1) the following to be substituted :— "(1) hereditary village offices existing in ryotwari villages or inam villages which for the purpose of village administration are grouped with ryotwari villages and belonging to the following six classes, by whatever designation they may be locally known, namely :— (i) village-munsifs, (ii) potels, monigars and peddakapus, (iii) karnams, (iv) nirgantis, (v) vettis, totis and fandalgars, (vi) talayaris. The Local Government shall have power to decide what officers come under any of the above classes."

THE SCHEDULE—*contd.*

Number year and short title.	Sections	Extent of repeal or modification
Madras Act III of 1895—*contd.*	6	In sub-section (*1*) for the words "In any local area in which the Madras Village-cess Act, 1893, is in force" the words "In any local area in which this Act is in force" to be substituted, and for the words "to which the said Act applies" the words "of the classes defined in section clause (*1*), of this Act" to be substituted. In sub-section (*2*), for the words "in any village in which the Madras Village-cess Act, 1893, is in force" the words "in any ryotwari village or in any inam village which for the purpose of village administration is grouped with a ryotwari village," to be substituted.
	20	In clause (ix) the words "the Madras Village-cess Act, 1893," to be omitted
B.—The Presidency of Bombay		
Bombay Act IV of 1881 (The Sindh Village-officers Act, 1881).	6	The whole section to be repealed
Bombay Act II of 1888 (*An Act to amend the Sindh Village-officers Act, 1881*).	3	The whole section to be repealed
Bombay Act II of 1898 (*An Act to amend the Sindh Village-officers Act, 1881, as amended by Bombay Act II of 1888*).	2 and 3	The whole of both sections to be repealed.
C.—The Lieutenant-Governorship of Bengal.		
Bengal Act VIII of 1862 (The Bengal Zamindari Dâk Act, 1862).	...	The whole Act to be repealed
Bengal Act I of 1895 (The Public Demands Recovery Act, 1895).	7	In clause (*d*) of sub-section (*1*) the words, figures and brackets "section 9 of Bengal Act 8 of 1862 (*An Act to improve the system of Zamindari Dâks in the Provinces subject to the Government of Bengal*) or" to be omitted
Regulation III of 1872 (The Sonthal Parganas Settlement Regulation)	The Schedule	The third entry in Part III to be omitted.
D.—The Lieutenant-Governorship of the Punjab and the Chief Commissionership of the North-West Frontier Province.		
Act XVII of 1887 (The Punjab Land-revenue Act, 1887).	29	In sub-section (*1*) for the words "one anna" the words "half an anna" shall be substituted, and for the words "village-officers" where they occur after the word "remunerating" the words "headmen and chief headmen" to be substituted
E.—The Chief Commissionership of the Central Provinces.		
Act X of 1878 (The Central Provinces Additional Rates Act, 1878).	...	The whole Act to be repealed
Act XVIII of 1881 (The Central Provinces Land-revenue Act, 1881).	77	In clause (*a*) the word "patwari" to be omitted
	138	In clause (*b*) the word "patwaris" to be omitted
	141	In clause (*a*) the words "village patwari and" to be omitted.
	143A	In clause (*c*) the words "village-patwari and" to be omitted.
	146A	The whole section to be repealed.
F.—The Chief Commissionership of Coorg.		
Regulation I of 1899 (The Coorg Land and Revenue Regulation).	24	The whole of sub-section (*2*) to be repealed
	25 and 26	The whole of both sections to be repealed.
	115	The words "including the village officers' cess" to be omitted
	119	The words "or paid out of the proceeds of the village officers' cess" to be omitted.

THE SCHEDULE—*concld.*

Number, year and short title.	Sections	Extent of repeal or modification.
Regulation I of 1899—*contd.*	145	In clause (xvi) the words "or arising out of the liability of an assignee to pay out of assigned land-revenue or of a person who would be liable for land-revenue, if it had not been realised, compounded for or redeemed, to pay on the land-revenue for which he would but for such release, composition or redemption be liable, such a percentage for the remuneration of a village-officer as may be prescribed by rules for the time being in force under this Regulation" to be omitted
G.—The Chief Commissionership of Ajmere-Merwara.		
Regulation III of 1895 (The Ajmere Patwari Regulation)		The whole Regulation to be repealed

STATEMENT OF OBJECTS AND REASONS

THE levy of certain provincial rates and cesses, such as the patwari-cess, the village-service-cess, the famine-cess, and the like, has been already abolished by executive orders in accordance with the announcements made in the Financial Statements for 1905-1906 and for 1906-1907, but the enactments under which these rates and cesses were imposed are still on the Statute-book, and the object of this Bill is simply to repeal these enactments and carry out certain consequential amendments in other enactments referring to the same.

The 14th December, 1906. DENZIL IBBETSON.

J M MACPHERSON,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Bill was introduced in the Council of the Governor General of India for the purpose of making Laws and Regulations on the 14th December 1906.

No. 8 OF 1906.

A Bill further to amend the Local Authorities Loan Act, 1879.

WHEREAS it is expedient further to amend
879. the Local Authorities Loan Act, 1879; It is hereby enacted as follows:—

Short title.

1. This Act may be called the Local Authorities Loan (Amendment) Act, 1906.

Amendment of section 4, Act XI, 1879.

2. In section 4 of the said Act, for the words "for the carrying out of any works which it is legally authorised to carry out" the words "for any purpose to which its funds can legally be applied" shall be substituted.

Amendment of section 5.

3. In section 5, sub-section (2), of the same Act, for the word "works" the word "purposes" shall be substituted.

Amendment of section 7.

4. In section 7 of the same Act, for the word "work", in both places where it occurs, the word "purpose" shall be substituted.

Amendment of section 8.

5. In section 8, clause (*b*), of the same Act, the words "other than the carrying out of works" shall be omitted.

STATEMENT OF OBJECTS AND REASONS.

THE Local Authorities Loan Act, 1879 (XI of 1879), provides for local authorities borrowing money for the carrying out of works It has been held that the provision in question limits the powers of these authorities to borrowing for objects which can be strictly described as works, and does not empower them to contract loans for the purposes of carrying out other objects of public utility. The Bill accordingly proposes to legalise the borrowing of money by local authorities for any purpose to which their funds can legally be applied; subject always, under section 5 (2) of the Act, to the definition by rule of the purposes for which loans may be raised.

E. N. BAKER.

The 30th November, 1906.

J. M. MACPHERSON,
Secretary to the Government of India.

[The figures on the margin denote the sections of the Bombay Boiler Inspection Act, 1891 (Bombay Act II of 1891), from which the provision is adopted.]

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Bill was introduced in the Council of the Governor General of India for the purpose of making Laws and Regulations on 14th December 1906:—

NO. 9 OF 1906.

A Bill to provide for the inspection of Steam-boilers and Prime-movers and for their management by competent Engineers in the Central Provinces.

WHEREAS it is expedient to provide for the inspection of steam-boilers and prime-movers and for their management by competent Engineers in the Central Provinces; It is hereby enacted as follows:—

[1.] **1.** (1) This Act may be called the Central Provinces Boiler Inspection Act, 1906.

Short title, extent and savings.

(2) It extends to the territories for the time being administered by the Chief Commissioner of the Central Provinces.

(3) Nothing in this Act shall be deemed to apply to—

(a) any locomotive engine, boiler or prime-mover used upon or appertaining to any railway, within the meaning of that word as defined in section 3, clause (4), of the Indian Railways Act, 1890, or IX of 1890.

(b) any boiler or prime-mover used exclusively for domestic purposes at atmospheric pressure, or

(c) any boiler or prime-mover used upon any vehicle or class of vehicles which the Chief Commissioner may, by notification in the local official Gazette, specify in this behalf.

2. In this Act, unless there is anything repugnant in the subject or context,—

Definitions.

(a) "boiler" includes any cylinder or vessel used for generating steam under pressure, and any steam-chest or other apparatus closely attached thereto:

(b) "prime-mover" includes any steam-engine, steam-hammer, fly-wheel, first driving shaft, or pulley attached to such engine, and every appurtenance necessary for the safe and efficient working of a prime-mover. [3.]

(c) "owner" includes any person using any boiler as agent of, or on hire from, the owner thereof; and

(d) "prescribed" means prescribed by rules under this Act.

Inspection and licensing of Boilers.

3. The Chief Commissioner may appoint one or more duly qualified persons to be inspectors for the purposes of this Act, and may fix the local extent of each such inspector's duties. [4.]

Appointment of inspectors.

[6.] Use of boiler by owner without license prohibited.

4. The owner of a boiler shall not use the same, or permit the same to be used,—

(*a*) except under and in accordance with the conditions of a *license* duly granted and in force under this Act, and

(*b*) unless the boiler is under the direct and immediate management and charge of an engineer *holding a certificate of competency under this Act declaring that he is competent to manage or be in charge of a boiler of such capacity or kind.*

Explanation.—A person employed to manage and be in charge of not more than two sets of boilers belonging to the same owner, and so situated that no one of them is more than a thousand feet apart from any other of them, shall be deemed to be employed in direct and immediate management and charge of all such boilers.

[7.] Registration and numbering of boilers.

5. (*1*) *The owner of any boiler who desires to use the same shall, if it is unregistered, cause it to be registered.*

(*2*) *The owner of a boiler may give notice in writing to the inspector that he desires to have the same registered, whereupon the inspector shall register such boiler and shall allot to it a number (to be called the registry number) corresponding to the number of the entry concerning it in the register of boilers.*

(*3*) *Such number shall be communicated to the owner and shall, within such reasonable period as the inspector may direct, be permanently marked upon the boiler by the owner thereof so as to be plainly visible and in such manner as the Chief Commissioner may prescribe.*

[8.] Procedure on application for boiler license.

6. (*1*) The owner of a boiler *which has been registered under section 5, or in respect to which the notice prescribed by sub-section (2) of that section has been given, shall, if he desires to use the same and does not possess a license in respect of the same granted under this Act and then in force, make an application for a license* to the District Magistrate, and the District Magistrate shall cause an examination of the boiler and of every appurtenance closely attached thereto to be made by an inspector with the least possible delay and within twenty days after the receipt of such *application*, and shall inform the owner of the date on which the said examination will take place.

(*2*) Every person *making an application* under this section shall simultaneously pay the prescribed fees for the examination.

[9.] Duty of owner to afford facilities for examination of and information regarding boiler.

7. (*1*) The owner or person in charge of any boiler to be examined under section 6 shall—

(*a*) afford to the inspector all reasonable facilities for such examination, and all such information as may reasonably be required by him;

(*b*) previously arrange that—

(*i*) the boiler shall be empty and cool, and shall be cleaned inside and outside;

(*ii*) fire-flues shall be swept;

(*iii*) fire-bars and fire-bridges shall be removed;

(*iv*) blow-off and other cocks shall be cleared for the purpose of examination;

(*c*) if required by the inspector, cause any brick-work or masonry in contact with the boiler to be removed;

(*d*) during the examination, keep the boiler effectively disconnected from any steam or hot-water communication with any other boiler.

(*2*) *The provision as to disconnection contained in clause (d) shall extend to every case in which a person is sent, or with the owner's assent goes, into a boiler for any purpose connected therewith.*

Grant and renewal of boiler licenses.

8. (*1*) If the inspector is satisfied that a boiler examined under section 6 and the appurtenances closely attached thereto are in good condition, *and if the registry number of the boiler is properly marked thereon in accordance with sub-section (3) of section 5*, he shall forthwith give to the owner a license to that effect in the form of, and containing the particulars specified in, Schedule A. [10.]

(*2*) Every *license* so granted shall be renewed by the inspector from time to time, if he is satisfied, after re-examining the boiler and the appurtenances closely attached thereto under the provisions of section 6, that the same are in good condition.

(*3*) Every original or renewed *license* granted under this section shall be granted for so long a period as it shall appear to the inspector probable that the boiler and the appurtenances closely attached thereto will remain in good condition:

Provided that no *license* shall remain in force for a period exceeding twelve months.

Appeal from refusal to grant boiler license.

9. If an inspector refuses to give a *license* or a renewed *license* to the owner of a boiler, or refuses to give the same for the full period or pressure applied for, he shall give to such owner within forty-eight hours his reasons for such refusal in writing, and any owner deeming himself aggrieved by the refusal may, within one month from the date of its communication to him, lodge *an appeal with the District Magistrate.* [11.]

[12.] **10.** (*1*) *The District Magistrate may appoint one or more assessors to aid him in disposing of the appeal, and shall, within ten days of its receipt, publicly inquire into and determine such appeal.*

Disposal of appeals.

(*2*) *The District Magistrate* may either reject the appeal, or grant the owner a *license* for such period not exceeding twelve months, and for such pressure, as he thinks fit.

(*3*) If the decision of the District Magistrate is not in accordance with the opinion of the assessor or a majority of the assessors, an appeal from it shall lie to the Commissioner, who shall thereupon proceed in accordance with the provisions of sub-sections (*1*) and (*2*), *and the decision of the Commissioner on such appeal shall be final.*

(*4*) In other cases the decision of the District Magistrate shall be final.

[13.] **11.** If *the District Magistrate* or Commissioner is of opinion that an appeal is unfounded or frivolous he may award any sum not exceeding one hundred and fifty rupees to be paid by the owner as costs

Award of costs in certain cases.

(*2*) Any sum so awarded shall be recoverable from the owner as if it were an arrear of land-revenue.

[14.] **12.** *The District Magistrate may, after such inquiry as he may consider just,* revoke any *license* granted under section 8 or section 10—

Revocation of boiler licenses.

(*a*) if any fee, lawfully due under this Act, is not paid after the same has been duly demanded ; or

(*b*) if there is reason to believe that such *license* has been fraudulently obtained or erroneously granted, or has been granted without sufficient examination ; or

[15.] (*c*) if there is reason to believe that, since the granting of such *license*, the boiler in respect whereof it was granted has sustained injury or has ceased to be in good condition.

13. (*1*) Any inspector may, at any time between sunrise and sunset on any day during the period for which a *license* may have been granted under section 8 or section 10, examine any boiler, whether at work or not, for which such *license* has been granted, in order to ascertain whether such boiler is in good condition, and whether any cause exists for revoking the said *license*.

Powers of inspector in connection with examination of licensed boilers.

(*2*) Any inspector may order the working of a boiler which he desires to inspect under sub-section (*1*) to be stopped only when that shall in his opinion be indispensable for the proper examination of the boiler.

(*3*) The reasons for any such stoppage shall be given in writing by the Inspector to the owner, on the owner's demand, concurrently with the order for stoppage, and the owner shall thereon become subject to the provisions of section 7.

14. If, at any time during the period for which a *license* under section 8 or section 10 has been granted, any structural alteration or renewal is made in any part of the boiler to which such *license* relates, the owner of such boiler shall give notice in writing of such alteration before it is completed to the District Magistrate or to such person as may be appointed by him in this behalf. [16.]

Duty of owner to report alterations in any part of licensed boiler.

15. (*1*) Every owner or person in charge of a boiler shall report in writing to the District Magistrate, or to such person as may be appointed by him in this behalf, every accident to the boiler or to any apparatus attached thereto which is calculated to weaken the strength of such boiler or to render it liable to explode. [17.]

Procedure on accident to boiler

(*2*) Every such report shall be made within twelve hours of the occurrence of the accident, and shall contain a true description of the nature of the accident and of the injury thereby caused sufficient to enable the person to whom it is made to judge of the gravity of the accident.

(*3*) The owner or person in charge of the boiler shall be bound to answer truly, to the best of his knowledge and ability, every question put to him in writing by the person to whom the report is made as to the cause, nature and extent of the accident.

(*4*) The District Magistrate, or any person generally or specially authorised by him in this behalf, may, after visiting the scene of any such accident as aforesaid, by an order in writing, direct that the use of the boiler be discontinued until it has been examined and certified as fit for use by an inspector.

16. (*1*) The owner of any boiler who has obtained a *license* therefor shall at all reasonable times during the period for which such *license* is in force be bound to produce the same when called upon to do so by the District Magistrate, or by any person generally or specially authorised in writing by the District Magistrate to demand its production. [18.]

Duty of owner to produce boiler license.

(2) A person who becomes owner of a boiler during the period for which a *license* therefor is in force shall be entitled to receive the *license* from the preceding owner and shall be subject to the provisions of sub-section (*1*).

Grant of Certificates to Engineers.

Grant of engineers' certificates of competency.

17. *Engineers' certificates of competency, declaring that the person named therein is competent to manage or be in charge of a boiler of such capacity or kind as is specified therein, may be granted and may be cancelled or suspended in accordance with such rules as may be prescribed by the Chief Commissioner in this behalf.*

Penalties and Procedure.

Penalty for non-compliance by owner with requirements of sections 7, 14, 15 and 16.

18. Any owner of a boiler who—

(*a*) *fails, as required by section 7, to furnish an inspector with necessary information or to make the necessary dispositions for facilitating examination,*

[28.] (*b*) fails to give notice, as required by section 14, of any structural alteration or renewal thereof,

(*c*) refuses or neglects to produce a *license* when duly called upon so to do under section 16, and

(*d*) every owner or person in charge of a boiler who fails to report, as required by section 15, any accident of the kind mentioned in the section,

shall, for every such omission, refusal or neglect, be punishable with fine which may extend to one hundred rupees.

Penalty on owner using boiler without license or certificated engineer or otherwise contrary to Act.

19. Any owner of a boiler who—

[29.] (*a*) uses the same, or permits it to be used, without a license duly obtained and in force in respect thereof;

(*b*) uses the same, or permits it to be used, at any time except whilst he has in his employ, in direct and immediate management and charge thereof, an engineer *holding a certificate of competency* under this Act *declaring that he is competent to manage or be in charge of a boiler of such capacity or kind;*

(*c*) uses the same, or permits it to be used, in contravention of an order for discontinuing its use made under section 15, sub-section (*4*), or at a higher pressure than that allowed by any *license* in force in respect thereof;

shall be punishable with fine which may extend to five hundred rupees and, in the case of a continuing offence, with an additional fine which may extend to one hundred rupees for every day after the first in regard to which he is convicted of having persisted in the offence.

Penalty for tampering with registry number of a boiler.

20. Whoever removes, alters, defaces, renders invisible, or otherwise tampers with a registry number marked on a boiler shall for every such act be punishable with fine which may extend to five hundred rupees. [30.]

Penalty for fraudulently marking a registry number on a boiler.

21. Whoever fraudulently marks upon a boiler a registry number which has not been duly allotted to it under this Act shall be punishable with imprisonment which may extend to two years, or with fine, or with both. [30 (a).]

Penalty for refusing or omitting to deposit engineer's certificate in accordance with rules under section 25 (*1*) (*e*).

22. Whoever, being *required* to deposit his certificate *in accordance with the provisions of any rule made under section 25, sub-section (1), clause* (*e*), refuses or omits to do so, shall be punishable with fine which may extend to five hundred rupees. [31.]

Cognizance of offences against Act.

23. No Court inferior to that of a Magistrate of the first class shall have jurisdiction to try any person charged with an offence against this Act. [32.]

Charges within what period to be brought.

24. No charge shall be brought against any person of any offence punishable under this Act except within six months after the commission of the offence, nor shall any such charge be brought except with the sanction or under the direction of the District Magistrate. [33.]

Rules.

Power to make rules.

25. (*1*) The Chief Commissioner may make rules consistent with this Act for all or any of the following purposes, namely:— [35.]

(*a*) for settling the duties and emoluments of inspectors appointed under this Act, and regulating the control to be exercised by *District Magistrates* over such inspectors;

(*b*) for fixing the fees to be levied for the inspection of boilers under sections 6 and 15 at such rates not exceeding those specified in Schedule B as the Chief Commissioner may think fit;

(*c*) *prescribing the procedure to be followed in the hearing of appeals under section 10, the emoluments or fees to be received by assessors appointed under that section, and regulating the holding of inquiries under section 12;*

(*d*) *providing for the grant of engineers' certificates of competency, and in particular prescribing—*

(*i*) *the cases in which certificates may be granted without, and those in which they may be granted only after, examination,*

(*ii*) *the duties and emoluments of examiners, and the conduct of examinations,*

(*iii*) *the qualifications to be required of, and the fees to be paid by, candidates for examination, and applicants for certificates without examination, respectively,*

(*iv*) *the different classes of certificates which may be granted, and the nature of the boilers which each such class of certificate shall cover,*

(*v*) *the form of certificates and the authority by which they may be granted, and*

(*vi*) *the mode in which a record of certificates granted shall be kept and the cases in which, and the fees on payment of which, duplicate certificates may be granted;*

(*e*) providing for *the cancellation or suspension of engineers' certificates of competency and in particular for,*—

(*i*) *the procedure to be followed in inquiries* into allegations of *incompetence,* drunkenness, misconduct or negligence on the part of holders of *such* certificates, *and*

(*ii*) *the deposit of such certificates by the holders of the same, when so required, pending the result of such inquiries and the action to be taken on their failure to comply with such requisitions;* and

(*f*) generally for carrying out the purposes of this Act.

(2) *The power to make rules under this Act is subject to the condition of the rules being made after previous publication.*

(3) All rules framed under this Act shall be published in the local official Gazette, and shall thereupon have effect as if enacted in this Act.

Miscellaneous.

Disposal of sums levied under Act.

26. All fees, costs and penalties levied under this Act shall be disposed of in such manner as the Chief Commissioner may direct.

Certain provisions of Act applicable to prime-movers.

27. (*1*) The Chief Commissioner may, by notification in the local official Gazette, apply so much of this Act as relates to the taking out and grant of licenses for, and the inspection of, boilers to prime-movers generally, or to prime-movers of any particular class in any place or district in which this Act is for the time being in force.

(2) During any such period as any notification under sub-section (*1*) is in force in any place or district, the provisions of this Act thereby made applicable to prime-movers shall be read and understood in such place or district as if the word "boiler" included the words "prime-mover" wherever used therein.

SCHEDULE A.

(*See section 8.*)

FORM OF INSPECTOR'S LICENSE.

Name of owner.	Registry No and description of boiler, and age.	Power	When and where made.	When and where last repaired.	Time for which this certificate is to be in force.	Maximum pressure at which the boiler may be worked.	REMARKS.

I, the undersigned, certify that I have examined the above-named boiler, and to the best of my judgment the boiler, as shown in the above statement, and all its necessary appurtenances are in good condition and the Registry No. is properly marked thereon.

A. B.,
Inspector.

SCHEDULE B.

(*See section 25* (*1*) (*b*).)

MAXIMUM RATES OF FEES LEVIABLE FOR INSPECTION OF BOILERS UNDER SECTIONS 6 AND 15.

	Rs.
(1) For the inspection of each boiler not exceeding 10 horse-power nominal	15
(2) Ditto ditto exceeding 10, but not exceeding 20 ditto . . .	20
(3) Ditto ditto exceeding 20, but not exceeding 30 ditto . . .	30
(4) Ditto ditto exceeding 30, but not exceeding 50 ditto . . .	40
(5) Ditto ditto exceeding 50 ditto .	50

STATEMENT OF OBJECTS AND REASONS.

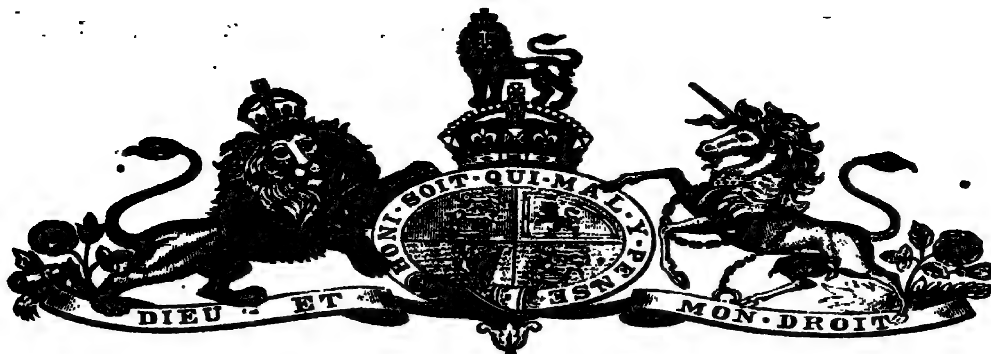
THE object of this Bill is to provide for the periodical inspection of steam-boilers and prime-movers and for their management by competent engineers in the Central Provinces.

2. Legislation has been rendered necessary by the rapid growth in the number of steam-boilers and prime-movers in the Central Provinces, due to industrial expansion, and the consequent danger of the importation of unsafe and second-hand boilers, owing to the absence of any legal provision for their licensing and inspection by competent authority and

for their management by properly qualified engineers. It is hoped that the Bill, which has been modelled on the lines of the Bombay Boiler Inspection Act, 1891, will meet these difficulties. The Bombay Act has been selected as a model, because it has already been applied to Berar by a notification under the Foreign Jurisdiction Act, 1879; and as it will eventually be necessary, for the sake of uniformity, to apply the law in force in the Central Provinces to Berar, it is anticipated that a measure based on the Bombay Act will enable this to be effected with the minimum of administrative inconvenience. The provisions of the Bill do not differ materially from those of the Bombay Act, and none of its clauses appear to call for special remark except those noticed below.

J. P. HEWETT.

The 3rd December, 1906.



Notes on Clauses.

Clause 10.—This clause is based on section 5 of the Bombay Act which provides for the appointment of a Commission to hear the appeals preferred by the owners of boilers and prime-movers against the decision of the Inspector, and also for determining other disputed points in connection with the Act; but, as in the Central Provinces the appointment of a Commission to try each case of this kind would cause delay, and as in most districts a sufficient number of experts could not be found, the clause provides for the disposal of such appeals by the District Magistrate, aided by an assessor or assessors. His decision, when in agreement with the assessor or a majority of assessors, will be final; otherwise appeals will lie to the Commissioner

Clause 17.—This clause follows the lines of section 4 of the Burma Steam-boilers and Prime-movers Act, 1882, in relegating to rules those provisions of the Bombay Act which regulate the grant and cancellation of engineers' certificates. Power to make the necessary rules is conferred by sub clauses (*d*) and (*e*) of clause 25.

Clause 19—The maximum penalty for using a boiler without a license, or for using a boiler not in the charge of a certificated engineer, has been fixed, in section 29 of the Bombay Act, at Rs. 100, both for the first offence and any subsequent continuing offences. The general practice, however, is to fix a much higher fine for the first offence, and the clause accordingly provides a maximum fine of Rs. 500 for the first offence and Rs. 100 for the continuing offences.

J. M. MACPHERSON,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 50.} CALCUTTA, SATURDAY, DECEMBER 15, 1906.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(METEO.).

MEMORANDUM OF THE METEOROLOGY OF INDIA DURING OCTOBER AND NOVEMBER 1906, WITH A FORECAST OF THE RAINFALL IN NORTHERN INDIA AND THE SNOWFALL ON THE NEIGHBOURING MOUNTAIN AREAS DURING THE COLD WEATHER OF 1906-07.

No. 2702—114-1, dated Calcutta, the 12th December 1906.

METEOROLOGY OF INDIA DURING OCTOBER ARD NOVEMBER 1906.

1. *October*—

(*a*) During the first two days the weather was dry over practically the whole of the country with the exception of north-east India and parts of Burma where light to heavy rain was falling. On the 3rd the rainfall dwindled almost to vanishing point in north-east India, but appeared in the south of the Peninsula; feeble monsoon conditions then obtained in Burma, Eastern Bengal and Assam and the southern half of the Peninsula until the 14th when the precipitation ceased in the first two areas.

(*b*) During the whole of the period from the first to the 14th the pressure conditions were much more unsteady than usual and the transition from the distribuion

characteristic of the monsoon proper to that of the retreating monsoon period was completed considerably before its normal date. As a consequence the monsoon rains terminated at least a fortnight earlier than usual in north-east India, the Central Provinces and Upper Burma.

(*c*) The distribution of pressure during the remainder of the month was such as usually obtains about the middle of November and the rainfall was accordingly confined mainly to the southern half of the Peninsula. A noteworthy feature of this period was the formation of a cyclonic storm of moderate intensity to the south-west of the Andamans between the 22nd and 26th This storm advanced along a north-westerly course to the Circars coast which it reached on the 28th; it failed, however, to surmount the Ghats and marched slowly parallel to the coast during the next three days, diminishing in intensity at the same time. It gave light to heavy rain in the Circars, Orissa and north-east India.

(*d*) The conditions did not point to an early winter. Weather was quiet throughout the month in Baluchistan and Persia, but was on the other hand feebly unsettled in Kashmir on two occasions, and heavy snow fell to an unusually low elevation in Garhwal in the middle of the month.

(*e*) The precipitation of the month was in defect of the normal throughout the country, the only area where an excess occurred being Eastern Bengal and Assam (+3 per cent). The deficiency was least and was unimportant in Burma, Bengal, north-west India, Mysore and Madras, and greatest in the northern half of the Peninsula, Central India and the United Provinces. The Konkan and Central India received only one-fourth, and the United Provinces and Central Provinces barely a tenth of their normal quantities.

(*f*) On the average of the whole of the country there was a defect of 22 per cent in the rainfall of the month.

(*g*) As usual the temperature conditions were determined by the distribution of rainfall. The only noteworthy features were (1) the prevalence of unusually cool weather over Gujarat and the neighbouring districts from the 1st to the 8th; over Burma from the 4th to the 12th, and over the southern half of the Peninsula between the 18th and 30th, and (2) a steady excess of temperature in the Punjab, Sind and Rajputana from the 9th to the 21st

2. *November*—

(*a*) During the first ten days dry weather prevailed generally over the country with a few local falls of rain in Burma, north-east India and the south of the Peninsula. Pressure was unusually low on these days in the north of the Indian region and its general distribution was such as usually obtains in October. This distribution held until the 13th when large pressure changes occurred resulting in a reversal of the prevailing characteristics.

(*b*) On the 14th pressure became low over the south of the Peninsula and the neighbouring sea area, and a small depression appeared over the north of Ceylon causing a marked increase in the rainfall over south India. Weather remained more or less disturbed in the south until the 19th when an extension of rainfall occurred up the east coast as far north as Waltair. No important change occurred during the next three days, but on the 23rd the rainfall again retreated to the south becoming very scanty on the 26th and reviving again on the 29th.

(*c*) The most important event of the remainder of the month was the appearance in Persia on the 26th of a cold-weather disturbance which subsequently advanced into north-west India. Its influence on the weather was shown chiefly in Persia and the east of Asiatic Turkey where it occasioned light to moderate rain.

(*d*) Weather was even drier than usual throughout the country with the exception of Eastern Bengal and Assam which received 24 per cent. more rain than the normal The defect was, both absolutely and relatively to the normal, greatest in Mysore and the Konkan which obtained only 17 and 22 per cent. of their respective normal amounts. In Madras the quantity received was about normal but was very unfavourably distributed: thus there was an excess of 33 per cent. in the south east and of 6 per cent. in Malabar

and a defect of 79 per cent. in the northern coast districts. Absolutely no rain was received in north-west and central India and very little in the Central Provinces and the Konkan. As far as the data indicate the precipitation of the month was above the normal in the Persian region and below it in Baluchistan and the western Himalayas.

(*e*) On the average of the whole of India there was a defect of 20 per cent. in the rainfall of the month.

(*f*) Weather was unusually warm during the month over practically the whole of the country. The excess of temperature was greatest in north-western India where it amounted to between 2° and 5°; and least in Burma and Madras where it was less than ½°. Similar conditions obtained in Baluchistan and the western Himalayas, temperature being 4° above the normal at Quetta and 2° at Gilgit, Leh and Simla.

3. The following table gives information regarding the rainfall as obtained from the data of the Indian Daily Weather Report for the period from the 1st October to the 30th November:—

Area.	Rainfall 1st October to 30th November.			
	Actual, 1906.	Normal.	Departure of actual from normal.	Percentage departure from normal.
	Inches.	Inches.	Inches.	
Burma	8·06	8·99	—0·93	—10
Eastern Bengal and Assam	5·64	5·35	+0·29	+5
Bengal	4·54	5·02	—0·48	—10
United Provinces of Agra and Oudh	0·09	1·65	—1·56	—95
Punjab	0·11	0·29	—0·18	—62
Rajputana	0·09	0·37	—0·28	—76
Central India	0·36	1·68	—1·32	—79
Sind	0	0·10	—0·10	—100
Gujarat	0·53	1·06	—0·53	—50
Konkan	1·55	6·17	—4·62	—75
Bombay, Deccan and Karnatak	2·14	4·99	—2·85	—57
Central Provinces	0·35	2·55	—2·20	—86
Hyderabad	3·05	3·95	—0·90	—23
Mysore	5·90	8·36	—2·46	—29
Madras	13·56	15·01	—1·45	—10
Mean of India when the size of the above areas is taken into account.	3·78	4·81	—1·03	—21

4. *Snowfall conditions of October, November and early December.*—The information available for the western Himalayas is very limited but suffices to indicate that notwithstanding the occurrence of a few heavy falls in October the snowfall of the past two months has been less than usual. This inference is borne out by the temperature of the northern hill stations in November which was above the normal by about 2° at Gilgit, Leh and Simla.

During the past week however a change has occurred; two depressions have formed in Persia of which the former passed into India in a well-defined form on the 29th November, a date rather early for such an event. Thus the season is not so early as that of two years ago but is something like that of last year.

EXTRA-INDIAN CONDITIONS.

5. According to telegraphic information received from the North-West Frontier Province there was a light fall of snow on the Paghman mountains on October 13th and a heavy fall on the Sufed Koh from the 20th to the 23rd; no snow fell on any of the Afghan hills until the end of November. Conditions in this zone were thus very similar to those obtaining in the western Himalayas. In the Persian region the precipitation was even less than usual in October but exceeded the normal in November.

6. Among the recent data of the Indian Ocean may be noted.—

Zanzibar:—The October rainfall was practically normal and the November rainfall in excess by 1 38' or 18 per cent.

Seychelles:—Rainfall in October amounted to 4 60," which is 0·21" in defect; in November the total was 7·21" or 4 96" in defect.

DISCUSSION OF THE DATA.

7. The extra-Indian regions of which the present conditions might be supposed to have most influence upon the precipitation of the approaching cold weather are the Indian Ocean and Siberia. With regard to the former it was pointed out a year ago that excess or defect of rainfall during November at Zanzibar and Seychelles had a marked tendency to be followed by excess or defect of cold-weather precipitation. The number of years for which data are available is not great enough for accurate results to be given by statistical methods, but the 'correlation coefficient'* of the subequatorial rainfall of November with the precipitation of the succeeding cold weather in north-west India proves to be + ·50 with a probable error of ·1. In other words about 50 per cent. of the variations of the cold weather precipitation may be regarded as determined by those of the November rainfall at Zanzibar and Seychelles, the remaining 50 per cent. being governed by factors independent of this; and in the estimate of 50 per cent. there is probably an error of 10 owing to the fact that the number of years available is not sufficient to overcome the inequalities in the data.

It should however be remembered that the calculated relationship of rainfall at Zanzibar in November both with the number of sunspots and with the subsequent Indian precipitation differs very largely from those of October and December; it would appear therefore that there are large accidental irregularities and that conclusions derived from November rainfall are less certain than might otherwise be the case.

There is nothing *a priori* improbable in a relationship between the rainfall at Zanzibar and Seychelles and the subsequent winter precipitation in northern India. Excess of the former would imply increased ascensional movement at the equator and increased flow in the upper atmosphere in directions away from the equator; and as it is well known that the cold-weather storms occur in the higher air levels it is natural that their vigour should be affected by an increase in the supply of air from the equator.

* If the variations of two quantities are connected by a relation of cause and effect the variations of one of them will to a certain extent be determined by the variations of the other; the average ratio of the amount so determined in either quantity to its total variation is called the "correlation coefficient."

In other words it is the proportionate extent to which the variations of one quantity are determined by those of the other. The sign prefixed is + or — according as the two quantities vary in the same or in opposite directions.

8. The avialable data are contained in the following table of departures from normal values :—

Year.	Sunspot number	November					Subsequent* cold weather	
		Zanzibar rainfall	Seychelles rainfall	Mean of vertical pressure differences	Mean of corresponding temperatures	Horizontal pressure differences (Para 12)	Rainfall	Snowfall

Normal amount	45·6	7·86	12·17				1·47	

* The years given refer to the data for November the details of rain and snow apply to the subsequent period December to March Very large departures in snowfall are indicated by doubled signs

† Average for the first-half of the year

The mean of the departures of November rainfall at Zanzibar and Seychelles this year is—1·80", and this, taken by itself, suggests that the approaching cold-weather precipitation may be somewhat lighter than usual.

9. As regards Siberia it is natural to imagine that owing to the proximity of Kashmir to western Turkestan the variations of precipitation in the former area should be connected with the conditions in south-west Siberia, and in general that the intensity of winter conditions in Persia, Afghanistan and northern India should be affected by abnormalities in the larger air movements which would show themselves in the central portion of Siberia. Numerical examination of the data yields, however, no relationship between the precipitation in north-west India from December to March and that in south-west Siberia, during the same interval, and while there may be some slight tendency to increased severity of the Indian cold weather when Siberian pressure of the previous twelve months has been low, the connection is too slight to be of use in forecasting; the correlation coefficient in the latter case proves to be only —·11, in which the probable error is ·12.

10. The active state of the sun during the past year is an element that should be taken into account. Apparently 1905 was the year of maximum sunspots and the number observed this year is in moderate excess As was stated by Köppen in 1873, years of numerous sunspots tend almost everywhere to be on the average colder than years of few sunspots and Indian winters are not exceptional in this respect. It was pointed out in the cold-weather forecast of last December that in spite of considerable irregularities the winter snowfall has during the past 26 years shown evidences of maxima and minima at times close to those of sunspot activity. This relationship can be put to a numerical test as regards the precipitation measured in north-west India and the correlation coefficient of this precipitation from December to March with the number of sunspots of the previous year proves to be + ·17. While therefore the connection is confirmed it proves to be too small for much reliance to be placed upon it.

The temperatures of a number of areas have been numerically examined and the only exception as yet found to Köppen's law is that of winter in central Australia, where owing to the extreme dryness it might be expected that the temperature would be largely determined by the amount of solar radiation. It is therefore consistent with the analysis that the temperature in central Australia for the period May to August this year has been the highest of which we have data, and that the same winter at Cape Colony has been extremely severe.

Thus at the present time the solar activity would, if taken alone, suggest that a severe winter is rather more likely than a mild one.

11. Turning to the Indian conditions the tendency of the vertical gradients to be steeper than usual in winters of abundant precipitation was pointed out by Sir John Eliot in 1893; and the correlation coefficient of the winter precipitation with the mean of the pressure gradients at three representative stations is +·31. In the present year the conditions in upper India in November may be gathered from the following table of data for four hill stations; the numbers given are the departures from normal of the excess of pressure in the plains at the foot of the hill station above the pressure at the station itself.

Hill station.	Vertical gradient—November.			
	Murree.	Leh.	Simla.	Chakrata.
	"	"	"	"
Departure of pressure difference . . .	—·027	—·037	—·010	—·007

If however account be taken of the November temperatures at the hill stations and at the plains beneath them it is found, as might be expected, that this is closely related with the vertical pressure gradient, their coefficient being —·55. When this is allowed for it appears that high temperature, apart from pressure, is favourable to winter precipitation, and the excess of 1°·0 in the present year approximately annuls the effect of the deficiency in the vertical pressure gradients.

12. The high level in which the cold-weather depressions exist and their apparent dependence on a supply of air in the upper return current from the equator suggests the possibility of a relationship with the horizontal pressure gradient in the direction from south to north at a height of 6,000 or 7,000 feet above sea-level. Data for Wellington, Murree and Ranikhet show that the correlation coefficient of the horizontal gradient of November at the height of Wellington (6,200 feet) with the subsequent winter rainfall is +·22, the probable error being +·12. While the relationship in question appears to exist, the connection is not close enough for reliance to be placed on the results given by it.

13. An examination of the records of the past 20 years shows that moderately reliable indications of the character of the winter are afforded by the severity or mildness of

the weather in north-west India in November, and this year it appears that the commencement of winter has been slightly later and milder than usual. This argument for anticipating a slightly mild winter is supported to a certain extent by the deficiency in the subequatorial rainfall. On the other hand the evidence of recent solar activity points to a season rather more severe than usual.

Conclusion.

It does not seem possible to make any reliable inferences with regard to the approaching cold weather from the present indications. It would appear however that there is no reason for expecting any large departure from normal conditions.

GILBERT T. WALKER,
Director General of Observatories.

E. D. MACLAGAN,
Offg. Secretary to the Government of India.

SIMLA,
5th December 1906.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Rainfall Summary for the seven days ending at 8 h., on Thursday, the 13th December 1906, based on the Indian Daily Weather Reports of the period.

The small depression which had formed on the 5th of the month, and at the close of last week lay near Ceylon, was not long lived, for it had nearly disappeared by the morning of the 7th. Rainfall continued, however, in diminishing amounts over the south of the Peninsula during the next four days, and then ceased. Weather remained dry throughout the week in all other parts of the Indian region, except at a few isolated stations on the 13th, on which day the Bay Islands, False Point and Dras reported light falls. The precipitation at Dras was associated with a very rapid fall of the barometer in Kashmir, which had occurred on the preceding day.

A small and ill-defined wave of low pressure advanced across India from the west, where it had first appeared in Persia on the 8th, but beyond causing high temperatures and generally cloudy skies, it did not affect the weather in northern India.

Burma.—Skies were lightly cloudy throughout the week, and temperature was in excess during the first five days, and nearly normal on the last two. Light falls of rain were reported from Port Blair on the 11th, 12th and 13th.

North-east India and Orissa.—Skies were clear or only lightly clouded, and temperature was only normal until the 13th, when moderate cloud spread over the whole division and caused a large rise in night temperature. The only fall of rain in this area was 0·20" reported from False Point on the 13th.

The United Provinces, Central India and the Central Provinces.—Skies were nearly clear in this division until the 12th, when cloud spread over the whole area. Temperature was generally above normal in the United Provinces and the east of Central India, and nearly normal elsewhere.

North-west India.—Skies were much clouded in the extreme north during the greater part of the week. On the 10th cloud appeared in Gujarat, spread into lower Sind on the 11th, and by the next day had heavily overcast the skies in Rajputana. On the 13th, however, weather had cleared again over the greater part of the division. Temperature was above normal throughout the week, especially in the western districts, where a large average excess was continuously recorded. The barometer fell very rapidly in Kashmir on the 12th, and a light fall of snow was reported on the next day from Dras.

The Peninsula.—Rain fell in the south on the first five days, and some heavy falls were recorded at stations on the Coromandel coast: no rain was reported on the 12th and 13th. Skies were thickly clouded over the greater part of the division until the 12th, on which day cloud disappeared to a large extent, but had thickened again by the next morning along the East Coast. Temperature was normal or in defect in the south-east, where the chief rainfall occurred, and normal or in excess elsewhere.

The rainfall of the past fortnight was more than twenty per cent. in excess in the south-eastern districts of the Peninsula, practically normal in Malabar, and in general defect elsewhere.

The following summarises the chief rainfall amounts of the week, as reported at 8 h. each day:

December 7th, Nellore 3·85", Cuddalore 1·67" and Negapatam 1·60".
" 8th, Madras 2·74", Cuddalore 4·57" and Negapatam 1·33".
" 9th, Coimbatore 1·25" and Cuddalore 2·60".
" 10th, Cuddalore 1·94".
" 11th, Pamban 0·91".

RAINFALL DIVISION WITH REPRESENTATIVE STATION.	Rainfall sub-division named after representative station.	Rainfall data for week ending on 13th December 1906			Rainfall data from 30th November 1906 to 13th December 1906			Seasonal percentage departure from normal.

J. H. FIELD,
for Director General of Observatories.

E. D. MACLAGAN,
Offg. Secretary to the Government of India.

SIMLA;
The 13th December 1906.

B

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Season and Crop Prospects for the week ending Saturday, 8th December 1906.

Burma.—Slight rain fell in Minbu, Magwe, Yamethin, and two other districts. Reaping of early wet weather paddy is practically general and is approaching completion in Akyab and Kyaukpyu, and has been completed in the Singaing township of Kyaukse. Reaping of hillside paddy is completed in the Chin Hills. Reaping of late wet weather paddy has commenced in Amherst, Katha, Kyaukse, and Yamethin and has been completed in the Northern Shan States. Ploughing for dry weather paddy is completed in the Thabeitkyin sub-division of the Ruby Mines district and sowing has commenced in the Pakokku township of Pakokku and in Kyaukse. Sowing of peas is completed in Lower Chindwin. Sowing of wheat and gram has commenced in Kyaukse. The cultivation of miscellaneous island crops continues. In the Yamethin sub-division of Yamethin millet and unirrigated paddy have totally failed and outturn of irrigated paddy is estimated at 6 annas only. More rain is required inparts of Pakokku, Sagaing, Meiktila, Myingyan and the Chin Hils The prospects of the harvest on the whole continue good. The price of paddy has risen largely in Myingyan and considerably in Akyab; it has fallen largely in Maubin, Bassein, Mergui, and Thayetmyo, and considerably in Kyaukpyu; elsewhere it is practically stationary.

Eastern Bengal and Assam.—The weather is seasonable. Light rain has fallen in Sibsagar, elsewhere there was no rain. Plucking and manufacture of tea continue. The season is practically closed, and the outturn is good in Sylhet and Nowgong and fair in Darrang. Ploughing for and sowing of mustard and pulses; plucking of cotton; and harvesting of winter rice are in progress. Insects are causing damage to crops in parts of Sylhet and Kamrup. Prospects of cotton are unfavourable in the Garo Hills and Khasi and Jaintia Hills and fair elsewhere. Prospects of winter rice and other standing crops are moderate. Prices of common rice :—Manipur 18; Kohima 18; Silchar 9½; Barisal, Chittagong, Rangamati and Bogra 9; Noakhali 8 to 9; Faridpur 6¾ to 9; Mymensingh and Comilla 8¾; Tezpur 8½; Dacca 8¼; Sylhet, Gauhati, Nowgong and Sibsagar 8; Pabna and Dibrugarh 7½; Rampur Boalı, Dinajpur and Malda 7; Tura 6 to 7; Jalpaiguri and Dhubri 6⅔; and Rangpur, Sillong and Aijal 6 seers per rupee. Prices have risen in six; fallen in nine; and have remained stationary in the remaining districts. Six persons are employed on test work in Dacca and 994 persons receive gratuitous relief in Sylhet. Prices are daily falling and the condition of people is improving with the new crop now on the market.

Bengal.—There was no rain during the week. Harvesting of winter paddy is still in progress. Spring sowings are almost all over in the Bihar districts, they are still going on in some places in Lower Bengal. Rain is needed for the spring crops in Gaya, Champaran and Purnea. Prospects of these crops are unfavourable in Darbhanga for want of rain. Sugarcane-pressing continues in Bihar; it has also commenced in Orissa. The number of persons on gratuitous relief is 2,411 in Muzaffarpur and 18,167 in Darbhanga. Only six persons are reported to be on test-works in the Madhubani sub-division of district Darbhanga. The number on relief works in Darbhanga is 18,408. Fodder and water are sufficient. The price of common rice has risen in six and fallen in ten districts.

United Provinces.—Except for a slight sprinkling in Dehra Dun, Saharanpur, and Moradabad the week was again rainless. Rain is needed in some districts. The crops are however generally doing well and irrigation continues where practicable. Harvesting and sowing are almost completed and germination is satisfactory. Slight damage has been done by locusts in Aligarh and by insects in Basti. Agricultural stock is in good condition except in Garhwal. Supplies are adequate but fodder is scarce in Sitapur, Bara Banki and Rae Bareli Prices are practically stationary.

The weekly report on the scarcity is as follows:— No change in agricultural conditions is reported from the Gorakhpur district. Prices have fallen slightly but are still high. The numbers on relief are:—on works 633, on gratuitous relief 1,175, total 1,808.

Punjab.—No rain. Prices are generally unsettled; wheat is rising in Rohtak and Sialkot and falling in Hissar, Gurgaon, Jullundur and Rawalpindi. Harvesting of autumn crops and pressing of sugarcane continue. Sowings of spring crops have been finished in some districts. The condition and prospects of the standing crops are good. Rain is wanted in Rohtak, Amritsar, and Rawalpindi. The outturn of autumn crops is good to average except that of cotton. Locusts have damaged the standing crops in Rohtak'

Shahpur and Multan. Cattle are generally in good condition. Fodder is sufficient. There are no complaints regarding the water-supply.

North-West Frontier Province.—There was no rain except 10 and 12 cents respectively in the Mardan and Swabi tehsils of the Peshawar district. Rain is urgently wanted to complete unirrigated spring sowings which are in progress. The condition of the standing crops on irrigated and unirrigated areas is generally good. A flight of locusts passed through the Dera and Kalachi tehsils in the Dera Ismail Khan district but no damage is reported. The harvest prospects and the probable outturn of autumn crops are fair. The water-supply is below average and there has been no irrigation from hill torrents in Dera Ismail Khan. Fodder is procurable except in the Kalachi tehsil where water is also scarce. The condition of cattle is average in Dera Ismail Khan; elsewhere it is good. Prices are fluctuating. Prices:—wheat 14⅝ to 18½; gram 17$\frac{1}{16}$ to 22; maize 15 to 27½; and bajra 18¾ to 21¼ seers per rupee.

Jammu.—No rain. Prices are fluctuating. Prices:—wheat 11 to 23, and maize 12 to 35 seers per rupee. The condition of the standing crops is fair except in the Kishtwar and Ramban tehsils where it is bad. The fodder supply is sufficient except in the Kishtwar and Ramban tehsils where it is scarce. Spring sowings have commenced in some parts of the Province.

Kashmir.—The weather is partially bright. Prices are stationary.

Rajputana.—Harvesting operations continue in some places and also sowings and watering for spring crops. Prospects are on the whole satisfactory. Damage by locusts is reported in Tonk. The condition of cattle is generally good. Pasturage or fodder is sufficient. Prices are rising in Mewar and Tonk and are steady elsewhere; prices are still high in some places.

Central India.—No rain. Autumn harvesting and spring sowings are in progress. The standing crops and the probable outturn are good. Crops have been slightly damaged in parts of Malwa. Pasturage is good. Prices are high in Gwalior and Bundelkhand; are falling in Baghelkhand and parts of Malwa; are normal in Bhopal; and are steady elsewhere. Opium sowing is in progress.

Central Provinces.—The weather is clear and cool. Autumn harvesting and spring sowings are almost completed. The condition of the spring crops is generally good. Threshing and winnowing of crops; picking of cotton; and cutting of juar are in full swing. Insects have damaged the wheat plants in parts of Hoshangabad; *tur* and linseed in Nagpur; linseed in Chanda; *tur* in Akola; and *tur*, linseed, and gram in Yeotmal, but damage is not widespread. Fodder and water are ample. The price of wheat has dropped from 12 to 16 seers per rupee in Seoni; prices are very steady elsewhere but are still equal to the scarcity level in Wardha, Nagpur and Balaghat, and slightly exceed it in Chanda and Bilaspur; rates are generally higher than those ruling at this time last year.

Bombay.—Spring crops are reported to be withering for want of rain in parts of the Deccan and the Karnatak. The standing crops have been slightly damaged by locusts in parts of Karachi, Hyderabad, Satara, and Kolhapur; by insects in parts of Karachi, the Upper Sind Frontier, and Thar and Parkar; by unfavourable winds in parts of Palanpur and Cutch; and are generally in good condition elsewhere. Harvesting and threshing of autumn crops are in progress. Spring sowings are nearing completion. Cotton picking is progressing in Sukkur, Hyderabad, Thar and Parkar, Ahmedabad, the Deccan and Kathiawar. The supply of drinking water is sufficient and water for irrigation purposes is adequate except in parts of Nasik and Poona. Agricultural stock is generally sufficient and in good condition. The fodder supply is adequate. The quantity of food grains purchasable per rupee is in the Deccan and Karnatak normal to 30 per cent. less than normal, and elsewhere normal to 25 per cent. below. Labourers are getting sufficient employment in the fields. The public health is generally good.

Hyderabad.—No rain. The autumn harvest is nearing completion; the early rice harvest is in progress. Standing spring crops are fair to good. Lands are under preparation for late rice sowings which are in progress in parts. Prices:—wheat 8, coarse rice 7½, and jowar 16 seers per rupee.

Mysore.—The standing crops are in good condition and are being generally harvested. Prospects of the season are good. Cattle are healthy and water and fodder are available.

Coorg.—Rainfall 13 cents. Picking of cardamom and coffee continues. Prices of food grains are stationary. Water and fodder are sufficient.

Madras.—The rainfall was heavy in Madras, Chingleput, Tanjore, and South Arcot; good in Nellore, Tinnevelly, North Arcot, and Trichinopoly; nil in Ganjam, Vizagapatam, Godavari, Bellary, Anantapur, and South Canara; and light to fair elsewhere. Irrigation supplies are sufficient except in parts of the Circars, Kurnool, Bellary, Nellore, North Arcot, and Salem. Ploughing, sowing, weeding and transplanting are in progress in parts. The standing crops are generally fair but some in Tanjore have been damaged by heavy rain and some in parts of Godavari and Kurnool need more rain. Harvests continue with outturn poor to normal and bumper. Pasture is sufficient; fodder is scanty in parts of Godavari, Kistna, Anantapur and Tanjore. The condition of cattle is generally good. The price of rice is stationary in eleven districts, has fallen in six, and has slightly risen in six. The prices of millets have fluctuated as follows:—*Ragi* is stationary in six districts, has fallen in five, and has slightly risen in ten. *Cholam* is stationary in three districts, has fallen in seven, and has slightly risen in four. *Cumbu* is stationary in three districts, has fallen in five, and has slightly risen in six.

The number of persons in receipt of relief during the preceding and present weeks in each Province or State is shown in the following table:—

Name of Province or State	Preceding week (Revised figures.)			Present week			Increase or decrease.

E. D. MACLAGAN,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

FINANCE DEPARTMENT.

ACCOUNTS AND FINANCE.

MINT.

REVIEW OF THE REPORTS ON THE ADMINISTRATION OF THE MINTS AND ASSAY DEPARTMENTS AT CALCUTTA AND BOMBAY FOR THE YEAR 1905-06.

RESOLUTION—By the Government of India, Finance Department.

No 6926-A, dated Calcutta, the 13th December 1906.

I.—WORKING OF THE MINTS AT CALCUTTA AND BOMBAY DURING THE YEAR 1905-06.

1. *Receipts of Gold.*—The tenders of gold by the public at the Mints were less in value than those of the preceding twelve months by about 7¼ crores of rupees. The decline may be attributed to the large sale of Council bills during the year and to the grant of telegraphic transfers on India against sovereigns in transit from Australia and Egypt. In paragraph 77 of the Financial Statement for 1906-07 it was explained that it had been the policy of Government to sell Council drafts freely so as to supply the trade demand as fully as resources permitted, the result being to diminish the amount of gold brought out to India, which would eventually have had to be reshipped to Europe. The following statement compares the value and nature of the tenders with those of past years:—

YEAR.	CALCUTTA				BOMBAY				TOTAL
	Value of sovereigns and half-sovereigns of current weight.	Value of light and uncurrent sovereigns and half sovereigns.	Value of bullion	TOTAL	Value of sovereigns and half sovereigns of current weight.	Value of light and uncurrent sovereigns and half-sovereigns	Value of bullion.	TOTAL.	Total value of gold tendered.
	R	R	R	R	R	R	R	R	R
1903-04	5,93,19,870	4,82,992	...	5,98,02,862	4,52,67,630	1,80,302	2,91,674	4,57,39,606	10,55,42,468
1904-05	6,74,50,230	4,44,830	..	6,78,95,060	4,93,15,410	9,81,735	5,90,846	5,08,87,991	11,87,83,051
1905-06	3,05,72,790	1,08,555	1,01,485	3,07,85,830	1,43,81,790	2,40,028	6,59,421	1,52,81,242	4,60,67,072

The bullion received during the year under review consisted mainly of gold from Indian mines.

2. *Coinage of Silver.*—The silver coinage, exclusive of fifty-cent pieces, was as follows:—

	CALCUTTA.	BOMBAY.	TOTAL.
	Value in rupees.	Value in rupees.	Value in rupees.
Rupees	7,42,64,383	12,17,23,238	19,59,87,621
Half-rupees	8,23,029	...	8,23,029
Quarter-rupees	15,74,935	...	15,74,935
One-eighth rupees	16,28,866	...	16,28,866
TOTAL	7,82,91,213	12,17,23,238	20,00,14,451

C

By far the greater number of rupees coined during the year were struck from bullion purchased to meet the demand for rupees. A portion of the coinage represented the re-coinage of 1835 and 1840 rupees and uncurrent coin. A small amount of coinage was also undertaken on behalf of the Karauli Durbar, which has adopted British silver currency.

3. *Dollar Coinage.*—No dollars were coined during the year at either Mint; the Bombay Mint, however, turned out 497,630 fifty-cent pieces for the Straits Settlements Government.

4. *Copper Coinage.*—Copper was coined at the Calcutta Mint only, the coinage consisting of pice, half-pice, pie-pieces, Straits Settlements quarter cents and Ceylon cents and half cents, of the aggregate value of R22,03,796.

The net gain on copper coinage passed into circulation during the year under review amounted to R9,85,311 as compared with R7,99,226 in the preceding year.

5. *Operative Losses* :—

Silver.—The loss on silver coinage at the Calcutta Mint during the year amounted to 29·8 standard tolas of silver for each lakh laminated, after adjustment of all fictitious gains and losses. In the Bombay Mint, there was a loss of 43 tolas on rupee coinage for each lakh laminated.

Copper.—In the Calcutta Mint, the operative loss on copper coinage was ·273 per cent in the year 1905-06, as against ·1 per cent in the previous year.

6. *Premelting.*—As usual, uncurrent coins received for recoinage were placed into direct alligation for standard meltings. Premelting was also dispensed with in the case of Mexican dollars and some silver received from the Secretary of State.

7. *Revenue and Expenditure.*—The revenue and expenditure (including interest on capital outlay and other *pro formá* charges) of the two Mints in 1905-06 compare as follows with the corresponding figures of the previous year:—

Year	Revenue			Expenditure		
	Calcutta	Bombay	Total	Calcutta.	Bombay	Total.
	R	R	R	R	R	R
1904-05 . .	1,85,168	20,41,207	22,26,375	14,05,385	10,86,717	24,92,102
1905-06 . . .	13,85,848	24,73,632	38,59,480	13,40,421	12,17,597	25,58,018

Of the aggregate revenue of R38,59,480, the receipts of the Mints on account of the seignorage on silver for the rupee coinage amounted to R36,23,556.

The expenditure on salaries and establishments of the two Mints for the year under review compares as follows with the expenditure incurred during the year 1901-05:—

	Calcutta Mint			Bombay Mint			Both Mints		
	1904-05	1905-06	Increase + in 1905-06	1904-05	1905-06	Increase + in 1905-06	1904-05	1905-06	Increase + in 1905-06.
	R	R	R	R	R	R	R	R	R
Fixed Establishment	1,80,720	1,85,909	+5,189	1,72,313	1,85,256	+12,943	3,53,033	3,71,165	+18,132
Temporary Establishment and overtime work . . .	1,14,059	1,37,471	+23,412	1,10,047	1,19,881	9,834	2,24,106	2,57,352	+33,246
Total	2,94,779	3,23,380	+28,601	2,82,360	3,05,137	+22,777	5,77,139	6,28,517	+51,378

The increase in the charges for temporary establishment and overtime work was mainly due to the increased coinage of the year.

8. ***Miscellaneous Work.***—The amount of miscellaneous work done in the two Mints is shown in the table below :—

—	Calcutta Mint.			Bombay Mint.			Both Mints.		
	Cost of work done.	Amount realised.	Profit.	Cost of work done.	Amount realised.	Profit.	Cost of work done	Amount realised	Profit.
	R	R	R	R	R	R	R	R	R
1904-05 . . .	63,571	78,345	14,774	12,372	13,235	863	75,943	91,580	15,637
1905-06 . . .	96,582	1,10,135	13,553	25,878	26,589	711	1,22,460	1,36,724	14,264

Medals and decorations were struck for the Army Department and for various public institutions, scales and weights were supplied to certain Government Departments, and some miscellaneous work was also undertaken for the public.

II.—Working of the Assay Offices at Calcutta and Bombay during the year 1905-06.

9. *Number of Assays.*—Apart from a number of miscellaneous assays, the gold and silver assays made during the years 1904-05 and 1905-06 were as follows :—

Year.	Calcutta Assay Office.		Bombay Assay Office.	
	Gold.	Silver.	Gold.	Silver.
1904-05	370	25,896	1,006	50,165
1905-06	398	34,801	1,564	49,874

10. *Meltings for standard coinage.*—The average fineness *per mille* of silver meltings for coinage during the year was as follows :—

	Calcutta.	Bombay.
Rupees	916·002	915·902
Half-rupees	916·010	...
Quarter-rupees	915·859	...
One-eighth rupees	915·714	...
Fifty cents	...	799·185

11. *Parting assays of silver coins.*—The average proportion of gold found in the silver pyx coins of the Calcutta mintage was ·172 *per mille* for rupees, ·484 for half-rupees, and ·258 and ·389 for quarter and one-eighth rupees respectively. The silver coinage of the Calcutta Mint is computed to have contained 5,345 troy ounces of gold of the approximate value of £22,662. In the Bombay Mint the proportion was ·123 *per mille* for rupees and ·075 for fifty-cent pieces.

12. *Pyx trials of silver coins.*—The results of the pyx trials in the Calcutta and Bombay Assay Offices are summarised in tabular form below :—

—	Trials for weight.			Trials for fineness.				
	Number of trials made	Total number of coins weighed	Average weight in grains.	Number of trials made.	Total number of coins assayed.		Average fineness per mille of coins assayed	
					Singly.	In groups after melting	Singly	In groups after melting.
Calcutta.								
Rupees	772	7,720	180·097	774	7,740	13,380	916·574	916·626
Half-rupees	26	260	89·996	27	270	1,040	916·532	916·558
Quarter-rupees	99	990	49·985	99	990	9,900	916·699	916·768
One-eighth rupees . . .	157	1,570	22·514	157	1,570	31,400	916·535	916·509
Bombay.								
Rupees	1,256	25,140	180·018	1,256	6,305	31,525	916·640	916·592
50 cents	5	120	209·465	5	25	75	799·996	800·300

In three different pyx trials of rupees in Calcutta, one coin in each was beyond the legal remedy for weight, and in five trials one coin was found in each to be outside the remedy for fineness; the fresh pyxes called for in these cases disclosed all coins to be within remedy. In Bombay all the rupees tested were within the legal remedy for fineness; but in one trial, one coin was found to be below the legal remedy for weight The fresh coins weighed in this case were, however, found to be within the remedy.

13. *Pyx trials in England for the year 1904-05 and 1905-06*—The result of the pyx trials made in England showed that the average weight and fineness of the British Indian coins from the Calcutta and Bombay Mints, and of British dollars and the Straits Settlements fifty-cent pieces from the Bombay Mint, were closely in accordance with the standards laid down for the two classes of coins

14. As will be seen from the interesting figures given in paragraph 20 of the Calcutta Mint Report, the coinage operations undertaken during the year were exceedingly heavy. The maximum number of rupees previously turned out in any one year was R17 14,79,318 in 1900-01, which year was described in the Resolution in this Department, No. 5033 A., dated the 1st November 1901, as a remarkable one in the history of the Mints. The number then reached has been exceeded in the year under review by nearly 2⅓ crores The enormous figure now attained is due to the unprecedented demand for rupees which set in during the latter half of the year and made it necessary to work the Mints at the highest possible pressure from November to March, the outturn during those months alone amounting to over 15¼ crores of rupees. These operations necessarily threw a great strain on the Mint staff which was cheerfully and ungrudgingly met.

ORDERED that this Resolution, together with the Reports from the Mint and Assay Masters, Calcutta and Bombay, be published in the *Gazette of India*, and that copies be forwarded to the Mint and Assay Masters.

J. S. MESTON,

Secretary to the Government of India.

REPORT ON THE WORKING OF THE CALCUTTA MINT.

No. 2777 dated 14th August 1906.

From—Colonel G. M. PORTER, R E, Master of the Mint,

To—The Secretary to the Government of India, Finance Department.

I have the honor to submit the report on the operations of the Calcutta Mint for the financial year ending 31st March 1906, together with the following statements, *viz.* :—

No. I.—Account of the total revenue and expenditure of the Mint during the year 1905-06.

No. II.—Statement of the coinage of the Mint for the year 1905-06.

No. III.—Statement showing the cost of miscellaneous work done in the Mint during the year 1905-06.

Captain A. L. C. McCormick, R.E., officiated as Master of the Mint from 4th April to 17th December 1905.

GOLD.

2. *Receipts.*—Mint certificates of the aggregate value of R3,07,85,830 were issued for sovereigns, and bullion tendered, during the year, in exchange for rupees. The value of sovereigns and half-sovereigns tendered in the previous year was R6,78,95,060. In consequence of the offer made by the Secretary of State in December 1905 to grant, until further notice, telegraphic transfers on India against sovereigns in transit from Australia, the tender of sovereigns at the Mint all but ceased during the remainder of the year. The Secretary of State has since withdrawn the offer temporarily.

The year's receipts are summarised below :—

Tale.	Classification.	Value in Rupees.
2,038,186	Sovereigns of current weight	3,05,72,790
7,237	Sovereigns of short weight or not more than 3 grains less than standard weight, nominal value . . .	1,08,555
	Bullion	1,04,485
		3,07,85,830

The sovereigns were tendered by the Presidency Bank and the bullion by a local firm of jewellers.

All the current weight sovereigns were as usual remitted to the Currency Office.

3. The total value of gold coin and bullion received during the year from treasuries and other Government departments was R31,444, and comprised :—

Tale.	Classification.	Value in Rupees.
	RECEIVED FROM TREASURIES.	R
79	Sovereigns of short weight or not more than 3 grains less than standard weight, nominal value . . .	1,185
81	Half-sovereigns of short weight or not more than 3 grains less than standard weight, nominal value . . .	607
24	Sovereigns of reduced weight or more than 3 grains less than standard weight, bullion value . . .	351
6	Half-sovereigns of reduced weight or more than 3 grains less than standard weight, bullion value . . .	42
	RECEIVED FROM OTHER GOVERNMENT DEPARTMENTS.	
	Bullion	29,259
		31,444

The bulk of the bullion came from the Bombay Mint and was transferred to provide a stock of gold for the manufacture of medals, war decorations and specimen coins.

4. The parcel of gold bullion valued at R1,04,485 received from the public and all gold coin below current weight, valued at R1,47,819, which had accumulated here up to 7th February 1906, were remitted to the Bombay Currency Office to be consigned to London.

5. *Receipts.*—The purchased silver received from London, in the year, for coinage into rupees, consisted of fine silver bars and dollars. The invoice value thereof taken into account was R3,74,35,045 and the equivalent in standard tolas 55,178,233.

The silver was received throughout the year with an intermission in June and July 1905, and heavy consignments arrived during the last four months.

The silver was made up of—

	Amount in lakhs of tolas.
London Bars	89.50
American "	232.55
French "	8.28
German "	16.46
Mexican Dollars	206.05
	551.84

The withdrawn and uncurrent silver coin received into the Mint showed a considerable falling off on the figures of 1904-05, the nominal value being R1,79,92,278 against R2,50,16,288.

Defaced coins from railways valued at R27,875 and rupees of the coinages prior to 1st September 1835 issued under the authority of the Government of India, valued at R5,018, are included in the receipts of the year.

In the following tabular statement the receipts of withdrawn and uncurrent coin are classified under the provinces from which the coin was remitted.

Classification of uncurrent Coins received during 1905-06.

Provinces.	Nominal value in thousands of Rupees.											
	1840 R 1st issue.	1840 R 2nd issue.	Worn 1840 ½-R 1st issue.	Worn 1840 ½-R 2nd issue.	William IV 1835 R	Worn William IV 1835 ½-R	Worn Govt Rupees	Soldered Coins.	Shroff marked Rupees	Reduced Rupees	Murshidabad, etc., coins.	To
India	652.4	1940.9	12.6	36.3	195.0	4.0	105.2	.	...	10.7	...	29
Bengal	785.0	2540.2	10.3	12.3	270.0	3.3	52.4	...	.5	.4	5.0	36
United Provinces	2040.5	6356.2	11.0	10.6	546.6	2.9	335.0	...	7.2	26.7	...	93
Central Provinces	15.9	65.5	.1	.1	4.5	...	5	...	...	.1	..	
Madras	133.4	441.8	2.7	2.8	26.4	1.2	90.5	...	...	13.7	...	7

Burma	68.6	313.0	1.0	.7	21.6	.2	1.0	...	..	.1	.	4
State Railways	...	.	.		...	...	.	27.2	..	.7	...	
Total	3839.9	12203.3	38.7	70.1	1124.7	12.0	606.6	27.2	8.0	56.7	5.0	179

6. In connection with the recoinage into Government rupees of the silver currency of Native States, 1,000 Karauli rupees were taken over at R952.

7. *Coinage.*—The outturn of the Mint has been increasing rapidly in recent years, and the silver coinage of the year is a record one. A reference to statement II submitted shows that 74,264,383 rupees, 1,646,058 half-rupees, 6,299,742 quarter-rupees and 13,030,928 one-eighth rupees were struck of an aggregate value of R7,82,91,213-8, the coinage of half-rupees having been resumed after a cessation of six years.

8. *Percentage of good coin.*—The percentages of good coin, calculated on the weight of metal that was passed through the laminating rolls, are given below and where comparable with last year's results show but small variations.

	Weight of ingots rolled. Lakhs of tolas.	Percentages of good coin.
Rupees	1,084.00	68.80
Half-rupees	12.52	65.71
Quarter-rupees	26.65	66.50
Eighth-rupees	25.82	63.54

9. The result of the Assay Master's trials of the pyx for the silver coins detailed in his report on the working of the Assay department, shows that the coins issued during the year were within legal remedy, both in weight and fineness.

10. The melting and coining losses written off the accounts during the year aggregated 31,838 standard tolas. After adjustment of all fictitous gains and losses, however, the net losses amounted to R16,900, which gave a rate of 29·8 standard tolas on each lakh of tolas of silver laminated, against a rate of 28·05 last year. The rate is slightly higher than last year, but it cannot be considered as beyond the range of *bonâ fide* loss.

COPPER.

11. *Coinage.*—As in the case of silver, the copper coinage was also exceptionally heavy; it was continuous throughout the year. The output of each denomination of coin is given in statement II. The number of pieces struck reached the enormous total of 157,062,608 valued at R22,03,796—single pice accounting for 130,058,484 of the outturn, half-pice for 8,921,600 and pie pieces for 13,060,449.

The Mint was kept so fully engaged in meeting the demand for Government copper coin, that the small orders of the Governments of the Straits Settlements and Ceylon were opportune. These demands were represented by a coinage of 2,007,600 quarter-cents for the former, and 1,508,770 and 1,505,705 cents and half-cents, respectively, for the latter.

12. The copper slabs purchased for the coinage weighed as much as 37,585·3 maunds and the average price paid therefor was R44·3 per maund or R6·63 per maund more than that of last year. The comparison shows how great a rise has occurred in the copper market.

13. The copper coinage losses written off the books during the year aggregated to 385 maunds 23 seers 76 tolas, and works out to 1·472 per 100 maunds of metal rolled; after setting off against this quantity the recoveries from copper oxide and precipitated copper, the losses are reduced to 71 maunds 24 seers 46 tolas or to ·273 per 100 maunds of metal rolled. These percentages are lower than those of last year.

MISCELLANEOUS.

14. The issues of medals in the year comprised 12,688 silver Tibet Mission 1903-04 medals, with 4,750 Gyantse clasps; seven thousand bronze Tibet Mission 1903-04 medals, with 1,000 Gyantse clasps. The dies for this decoration were received from the Royal Mint at the end of July 1905.

Besides the "Tibet Mission, 1903-04" medals, the Mint supplied to the Army department 200 "long service and good conduct medals" and 500 "Volunteer long service medals," as well as 3,428 clasps for past campaigns. The Royal Army Temperance Association demands for medals and stars continued without interruption, and kept a good portion of the Medal department establishment engaged thereon.

The medals issued during the year included 16 gold and 183 silver medals, struck for presentation by the Bengal Government to the Calcutta Police Force in recognition of the good work done by them during the visit to Calcutta of Their Royal Highnesses the Prince and Princess of Wales. Included in the work done for other Government departments, was a new silver seal for the High Court of Judicature, Fort William, the cutting of the seal having been entrusted to the head engraver of the Mint.

Statement III places the profit for the year on outside work done at R13,553.

15. *Mint working standard weights.*—The Assay Master's verification of the Mint standard tola and avoirdupois weight showed that the errors were very trifling.

16. The average daily working balance was 21,39,068 standard tolas; it fell to a minimum of 880,713 tolas on the 29th September when the daily outturn was about half-a-lakh of rupees and one lakh of pieces of one-eighth rupees, and rose to a maximum of 4,928,092 tolas on the 14th November when the output of rupees was eight lakhs a day.

17. *Standard Ingot Reserve.*—The portion of the ingot reserve held in Calcutta was drawn upon for coinage at the commencement of the month of December, when the demand for rupees was so great that the Mint was coining on an average eight lakhs daily; it was exhausted by the end of the month.

Since the close of the year, steps have been taken for the replacement of the ingot reserve by a reserve of greater capabilities and of a different character.

18. On the 2nd of March the Indian Coinage Act, 1906, was passed by the Governor-General of India in Council, and under its provisions a nickel one-anna piece is to be coined and the pice, half-pice and pie are to be struck in bronze instead of copper. The bronze for this coinage has the same proportions of copper, tin and zinc as those used for the British bronze coins, *viz.*, 95 per cent. copper, 4 per cent. tin and one per cent. zinc. The weight of the coins has been fixed by the Act at 75 grains for the pice, 37½ grains for the half-pice and 25 grains for the pie.

No nickel or bronze coins were, however, actually struck during the year uder report.

19. By the repeal of the Coinage Act, 1870, the following coins ceased to be coined at the Mint:—

Gold.—The double, single, two-third and one-third mohurs.

Copper.—The double pice.

As stated in last year's report, experimental meltings of bronze had been made and, in anticipation of the passing of the Act, meltings for bronze from July were included in the daily operations of the Mint, and by the 31st March 1906 a stock of 158½ tons of the metal had been accumulated.

Trial operations in rolling, annealing and stamping of bronze were conducted in January 1906, with satisfactory results.

20. The year was an exceedingly busy one, the number of coins of all denomination struck being 252,303,719, or an average of 944,959 pieces daily. The magnitude of the coinage operations may to some extent be realized by the fact that on the 2nd March the weight of silver cast into ingots for rupees, in the standard melting room exceeded 17·6 tons (1,534,489·1 tolas), and it is worthy of note that of this mass of metal operated on no single pot was found to be out of the narrow range of fineness (915·6 to 916·5) at which ingots are worked up into coin.

Again in the coining departments the large outturn of 1,000,499 rupees was reached on 28th March 1906, and a maximum daily outturn of 1,759,251 pieces on the 25th January 1906 made up of 706,291 rupees, 112,160 quarter-rupees, 883,200 single pice and 57,600 half-pice—a coinage which is not exceeded by the average monthly coinage of many a State in Europe.

To illustrate the magnitude of the work accomplished by the Indian Mints during the year I give, in the following table, figures of the combined coinage of the Calcutta and Bombay Mints, and the coinage of the Mints of the world as summarised in the Annual Report of the Deputy Master and Comptroller of the Royal Mint, 1905:—

	Tale of pieces.
Calcutta Mint	252,303,719
Bombay Mint	122,220,868
(1) TOTAL	374,524,587
(2) Mints of the world, excluding the Indian Mints	999,161,324

Percentage of (1) to (2) 37·43.

The Mints of the world which gave the next highest coinages were—

Germany, with colonial coinages	216,216,589
United States	152,422,302
United Kingdom, with colonial coinages . . .	126 575 761
Russia	111,353,848
France, including colonial coinages	95,591,149

The superintendents and workmen of the Mint staff have done good work in executing the coinage of the year, which is not only a record for this Mint but of the Mints of the world.

These heavy operations have often necessitated the attendance of the workmen for 14 hours a day, and the utmost vigilance has been exercised by the engineering staff to prevent any serious break down of the engines or machinery, a great part of which has been running since the Mint was opened in 1832.

I am pleased to bring to the notice of Government the loyal services rendered by the Mint establishment.

REVENUE AND EXPENDITURE.

21. *Revenue (a) Charges levied*.—The total amount credited in the year under this head was R13,04,009, out of which sum R13,03,684 represented the 2 per cent. seignorage on silver for the rupee coinage taken into the Mint accounts.

(*b*) *Gain on Coinage Operations.*—The gain on coinage operations amounted to R25,844, and of this sum R23,840 was the gain by alligating under standard.

22. *Cash and Transfer Receipts.*—The cash receipts amounted to R7,270, and were about the same as those received in the previous year. The transfer receipts amounting to R43,495 were, however, in excess of last year's figure, the supplies of military decorations bringing in a much larger receipt than in 1904-05 There was, however, a falling off of about R5,000 in coining and other charges on colonial copper coinages

23. *Expenditure.*—Loss on coinage operations.

Gold.—Under instructions received in July 1905, the loss on short weight sovereigns and half-sovereigns (*i. e.* those reduced by not more than three grains below standard weight) received at the Mint, being the difference between the nominal and bullion value of the coins, was no longer shown as a charge against the Mint, and such coins are now held in the accounts at their full value. The loss on such coins as formed part of the stock in the Mint at that time was adjusted, the write back on this account appearing in statement No. I being R398.

Silver (*i*).—The silver operative losses as stated in para. 10 amounted to R31,838.

(*ii*) The net loss on good coins issued during the year, owing to the coins being over the standard weight, was R22,287 against R8,641 in the previous year. Marginally is a detailed comparison of this loss for 1904-05 and 1905-06.

Per lakh of coin.

	1904-05	1905-06
Rupees	21·1	29·7
½ „	*Nil*	16·7
¼ „	+ 4·2	+ 2·9
⅛ „	21·5	16·7

(*iii*) The loss on withdrawn 1835 and 1840 rupees and uncurrent silver coins was R2,43,931 or R76,762 lower than the figure in last year's account.

The average mean wearages per rupee for the coins now being withdrawn, with no allowance for dirt on the coins, were found to be—

For	1835 rupees	. . .	2·844 grains.
„	1840 „	1st issue .	3·006 do.
„	1840 „	2nd issue .	2·340 do.

The total receipts of such coin are given in para. 5 of this report.

(*iv*) The difference between Mint and market price of silver used for the Army department medals, charged off in the accounts during the year, was R11,205.

	1904-05.	1905-06.	Increase.
	R	R	R
Fixed establishment . .	1,80,720	1,85,909	5,189
Temporary establishment and overtime pay . . .	1,14,059	1,37,471	23,412
TOTAL .	2,94,779	3,23,380	28,601

24. *Cost of Establishment.*—From the figures furnished in the margin, it will be seen that the establishment charges were R28,601 greater than in the previous year. This sum is divided as follows:—

	R
Mint	25,579
Assay Office	3,022

The increase on last year's charges is accounted for chiefly—

(*i*) By revision of establishment sanctioned in Finance Department letter No. 3171-Ex., dated 2nd June 1905.

(*ii*) Additional operatives engaged for increased coinage of the year.

(*iii*) Increased overtime work in the year.

25. *Copper used for alloy and contingent purposes.*—The value of the copper used under this head amounted to R37,326; of this sum R35,889 was the value of metal used for alloying the silver to the rupee standard, and represented the value of 827½ maunds of metal. The consumption of copper was proportionately lower than it was in 1904-05, owing to the average fineness of the purchased silver being lower than it was last year, the high percentage of Mexican dollars in the purchased bullion producing this result.

26. *Local and English Stores.*—The total expenditure under this head amounted to R1,15,441 against R1,30,927 in the previous year. There is a decrease of R9,452 under the head of local stores, due to smaller payments for fuel and wood for copper coin boxes, a cheaper wood being now used for this purpose; and a decrease of R6,034 under the head of English stores arising principally from the smaller expenditure on crucibles.

27. *Contingent Charges.*—The expenditure under this head was R47,555, and the increase over last year's expenditure is principally due to the consumption of electricity for working four motors taken into use on arrival from England.

28. *Transfer Charges.*—These charges which amounted to R16,245 are made up of R7,789 for coin bags from the Alipur Jail, R2,699 for jars transferred from the Bombay Mint, R2,416 copper wire from the Telegraph department, R1,365 for landing and shipping charges, and other small charges aggregating to R1,976.

29. *Miscellaneous Charges external to Mint.*—The charges under this head reached R19,427 against R17,151 in the previous year. The increase of over R2,000 is accounted for by the additional superannuation and retired allowances made in the year.

30. Pro formâ *Charges.*—These charges, which included the interest at 4 per cent. on stock and block and on the silver, copper, bronze and store balances, amounted to R4,57,264 and was lower by R16,647 than the sum charged to this head last year on account of the smaller silver balance.

31. *Capital Account.*—The additions to buildings and plant amounted to R61,781. Of this sum R36,895 and R7,778 were for nine automatic weighing machines and two 8,000 oz. bullion balances, respectively, received in connection with the scheme for raising the daily output of the Mint to 6 lakhs of rupees and 5 lakhs of pieces of bronze single pice daily.

32. *Resumé.*—Owing to the large rupee coinage from purchased silver, the Mint received as seignorage a sum sufficiently large to give a credit balance on the year's working, after meeting interest charges on capital outlay and other *pro formâ* charges. This sum, it will be seen from statement No. 1, amounted to R45,426.

COUNTERFEIT COINS.

33. I attach the usual statement of counterfeit coins. It will be seen therefrom that 2,992 rupees, 21 half-rupees, 50 quarter-rupees, and 95 one-eighth-

rupees counterfeits were detected among the withdrawn and uncurrent silver coins examined during the year, and the proportion was about the same as in the previous year.

The proportion in the remittances from the Madras Presidency was the same as in 1904-05, but for the other provinces, with the exception of the United Provinces, the proportionate rates were greater. Had it not been for the considerable improvement in the remittances from the latter province—about 6 per lakh better than last year—and from whence 52 per cent. of the remittances came, the mean rate would have been higher than that of last year instead of working out to about the same figure.

Except for fifteen struck coins all the counterfeits found in the remittances were castings. The struck specimens and only one cast rupee were so well executed as to be outside the category of "ordinary conterfeits."

The counterfeit coins from treasuries and other sources totalled 2,296 as marginally detailed; of this number 2,093 rupees and all the small coins were castings varying in fineness were assayed from 972.9 to 729.8 per mille. Of the struck coins, 92 were very well executed and 13 were poor imitations, one of the former assaying 883.3 fine has been declared to have been one of the best counterfeits ever seen in the Assay office. That office examined 366 suspected and counterfeit coins and found 95 genuine, 136 cast counterfeits, 9 doubtful (cast or struck), 33 struck and 21 brass counterfeits containing no silver.

Rupees	2,198
½ "	18
¼ "	18
⅛ "	62

The well-executed cast counterfeit referred to above, as found in remittances, contained 687.2 per mille of silver.

Out of all the conterfeits assayed in the year only one coin gave an assay result approximating to the fineness of silver in the genuine rupee. It was reported 919.7 fine per mille but contained in addition to silver and copper, traces of zinc, lead and gold.

Several rupees of coinages prior to September 1835 were analysed and reported by the Assay office to contain silver varying in fineness from 997.4 to 530.2 per mille.

The dies and other coining implements sent to the Mint in the year for inspection contained nothing that could be classed as of good workmanship.

In the statement is included the number of counterfeit coins cut in the year tabulated from returns furnished by treasuries and currency offices.

OFFENCES AGAINST COINAGE.

34. The usual statement of offences against the coinage is attached. It shows a marked falling off in the number of cases brought to trial in 1905, with a decrease of over 16 per cent. in the total numbers of convictions when compared with the figures of last year's statement. The United Provinces comes first with 20 per cent. of all offenders, and the Punjab follows with 12 per cent. Offences under sections 233, 234 and 235 of Indian Penal Code, judged from the number of cases brought to trial, were committed principally in the Provinces of Eastern Bengal and Assam, United Provinces, Burma and the Punjab.

The ratio of the number of persons convicted to the persons tried has risen to 74.3 in the year under review from 60.6 in the year 1904.

No. I of 1905-06.

Account of the Total Revenue and Expenditure of the Calcutta Mint during the year 1905-06.

REPORT ON THE WORKING OF HIS MAJESTY'S ASSAY OFFICE.

No. 93, dated Calcutta, the 2nd July 1906.

From—MAJOR J. LLOYD T. JONES, I.M.S., Offg. Assay Master, Calcutta,
To—The Secretary to the Government of India, Finance Department.

I have the honour to submit the following report on the operations of the Assay department, Calcutta, for the official year 1905-06.

2. *Number and description of assays* :—

The number of assays during the year amounted to 36,980 as compared with 29,077 in the previous year. The details are shown in the following table :—

Description.	Number.	Total.
GOLD.		
Assays on gold from all sources	304	
Check assays on fine gold	94	398
SILVER.		
Assays on silver alligated for Silver Standard Coinage—		
for Rupees 13,296; ,, ½-Rupees 288; ,, ¼-Rupees 838; ,, ⅛-Rupees 1,104	15,526	
Do. pyx coins	14,087	
Do. miscellaneous	4,034	
Check assays on fine silver	1,154	34,801
MISCELLANEOUS.		
Parting assays	66	
Assays on various metals and ores	1,676	
Assays on Mint drosses	39	1,781
TOTAL FOR THE YEAR .	...	36,980

3. *Gold Assays.*—The total number of gold assays from all sources during the year amounted to 398 as compared with 370 last year: of these 138 were for Government.

4. *Meltings for Silver Standard Coinage.*—

Silver meltings for coinage were assayed in every month of the year.

The average fineness of the silver meltings was—

for rupees 916·002
,, ½ rupees 916·040
,, ¼ rupees 915·859
,, ⅛ rupees 915·744

as shown herewith in detail.

Months.	Average fineness of meltings per mille for			
	Rupees	½-rupees.	¼-rupees.	⅛-rupees.
April 1905	916·069	...	915·964	915·795
May ,, ...	916·054	...	915·856	915·696
June ,, ...	915·993	...	915·774	915·392
July ,, ...	915·970	...	...	915·675
August ,, ...	915·962	...	...	...
September,, ...	915·967	916·024	...	...
October ,, ...	915·962	916·012	...	915·697

December,, ...	916·013	...	...	...
January 1906	915·988	...	915·859	...
February ,, ...	916·018	916·075	915·782	915·735
March ,, ...	916·111	...	...	915·755
AVERAGE FOR THE YEAR .	916·022	916·040	915·859	915·744

5. *Gold in Silver Coinage.*—The average proportion of gold found by monthly parting assays in the silver pyx coins for the year was 0·172 per mille for rupees, 0·484 per mille for ½-rupees, 0·258 per mille for ¼-rupees and 0·389 per mille for ⅛-rupees.

The coinage of the year is computed to contain ·5345 troy ounces of gold of the approximate value of £ 22,662.

6. *Pyx Trials—Rupees.*—The trials for weight numbered 772: the total number of rupees weighed amounted to 7,720. One rupee in each of 3 trials was found beyond remedy, but fresh pyxes which were called for were all passed. The average weight per piece was 180·087. The heaviest rupee weighed 180·98 and the lightest 178·71—13·08 per cent of the coins were found of the exact standard weight.

The trials for fineness were 774, and the total number of rupees assayed was 21,120, of which 7,740 were assayed singly and 13,380 in groups of 20 after melting. Of the coins assayed singly, the extreme variations in fineness ranged from 913·6 to 920·0. The highest and lowest figures for any melting of finished coins were 917·7 and 915·6 per mille. The average fineness per piece was 916.574 and of the melted coins 916·626. Five trials disclosed, each of them, one rupee beyond remedy, but all passed after the examination of the second pyxes called for.

The average results are shown in the following table :—

Months.	Average weight of Pyx Rupees (grains).	Average fineness of Pyx Rupees (per mille)		Gold per mille
		Single.	Melted	
April 1905	180·064	916·506	916·778	0·163
May "	180·067	910·286	916·655	0·215

Average for the year	180·087	916·574	916·626	0·172

7. *Half-rupees.*—Pyx trials for these were made during four months of the year. There were 26 trials for weight and 27 for fineness.

24·23 per cent. were of the exact standard weight. The highest and lowest weights were 90·42 and 89·61 grains, and the average weight was 89·996.

The average fineness of the coins assayed singly was 916·532, and of the melted coins assayed in groups of 40 was 916·558. The highest and lowest figures for single coins were 919·0 and 915·1, and for any melting of finished coins 917·2 and 916·2.

One pyx disclosed one coin outside remedy in fineness, but the second pyx called for passed.

8. *Quarter-rupees.*—Pyx trials for these were made during six months of the year, the total number being 99 for both weight and fineness.

17·88 per cent. of the pieces were of the exact standard weight. The heaviest and lightest weighed 45·93 and 43·61 grains; and the average weight was 44·985.

The average fineness of the coins assayed singly was 916·699, and of the melted coins, assayed in groups of 100, 916·768.

All the coins were within the legal remedy in fineness and weight.

9. *One-eighth rupees.*—Pyx trials were made during 11 months of the year and numbered 157 for weight and the same for fineness.

The percentage of coins of exact standard weight was 20·57.

The average fineness of the coins assayed singly was 916·535, and of the melted coins assayed in groups of 200 was 916·509.

No trial disclosed any coin outside the legal remedy.

10. *Summary of pyx trials.*—The following table is a summary of results detailed above in paragraphs 6, 7, 8 and 9 :—

DENOMINATION.	Number of coins weighed singly	Number of coins assayed singly.	Number of coins assayed after melting.	Average weight (grains).	Average fineness of coins assayed singly (per mille).	Average fineness of coins assayed after melting (per mille).	Proportion of gold in pyx coins (per mille).
Rupees	7,720	7,740	13,380	180·087	916·574	916·626	0·172
Half-rupees . . .	260	270	1,040	89·996	916·532	916·558	0·484
Quarter-rupees .	990	990	9,900	44·985	916·699	916·768	0·258
One-eighth rupees .	1,570	1,570	31,400	22·514	916·535	916·509	0·389

11. *Miscellaneous assays.*—Of the 1,676 assays under the head "Assays on various metals and ores," 1,603 were assays made for the Mint, Treasuries, Police and Magistrates on coins suspected to be counterfeit and on materials connected with the manufacture of counterfeit coins.

A separate report is submitted to the Mint Master on the work of this office in connection with counterfeit coins.

12. *Verification of weight pieces*—The Mint working standard tola set of weight pieces, as well as the working standard avoirdupois set, were verified during the year against the respective corresponding Assay office sets.

13. The appointment of Assay Master was held by Lieutenant-Colonel F. F. MacCartie, I.M.S., throughout the year. The appointment of Deputy Assay Master was held by Major J. Lloyd T. Jones, I.M.S., from 1st to 17th April, by Colonel MacCartie in addition to his own duties from 18th April to 4th June, and by Major J. J. Bourke, I.M.S., from 5th June to the end of the year.

REPORT ON THE WORKING OF BOMBAY MINT.

No. 1266, Bombay, dated 15th August 1906.

From—Captain A. L. C. McCormick, R.E., Offg Mint Master,

To—The Secretary to the Government of India, Finance Department.

I have the honour to submit my Annual Report on the operations of the Bombay Mint for 1905-06, together with the prescribed statements.

Major W. G. R. Cordue, R.E., held charge as Mint Master up to the 22nd December 1905, since which date I have been in charge.

GOLD.

2. *Receipts* —

(*a*) The gold bullion and coin tendered during the year were valued at R1,52,81,242, as compared with R5,08,87,991 in 1904-05, and consisted of the following.—

Classification.	Value in rupees.
Sovereigns of current weight	1,43,81,790
Sovereigns of short weight or not more than three grains less than the standard weight (nominal value)	2,39,370
Half-sovereigns of short weight or not more than three grains less than the standard weight (nominal value)	248
Sovereigns of reduced weight or more than three grains less than the standard weight (bullion value)	389
Half-sovereigns of reduced weight or more than three grains less than the standard weight (bullion value)	21
Gold from Indian Mines	6,59,346
Bazaar gold and miscellaneous	78
Total .	1,52,81,242

(*b*) In addition to the above, 1,129 sovereigns were found to be defective on detailed examination at the Mint and were withdrawn by the tenderers.

(*c*) With the exception of R1,09,186, the whole of the gold received, together with the balance of the previous year, was transferred to the Currency Gold Bullion and Coin Account.

(*d*) During the year under review three remittances of gold bullion and current and light weight sovereigns and half-sovereigns of the aggregate value of R1,59,26,724 were shipped to London, and Indian Mines' gold of the value of R27,412 was transferred to the Calcutta Mint.

(*e*) At the close of the year the balance in the Currency Gold Coin Account held at the Mint amounted to R1,29,75,000 and comprised current weight sovereigns only.

SILVER.

3. *Receipts.*—

(*a*) The silver purchased by the Secretary of State and brought to account during the year was invoiced at R6,73,61,559.

The part of the Ingot Reserve held in Bombay, which stood at 1,59,19,417 standard tolas at the beginning of April 1905, was brought up to 200 lakhs by the end of the same month The amount was however drawn upon for coinage later in the year, the withdrawal commencing in November 1905. The reserve was exhausted by January 1906, and, owing to the urgent demands for rupees, no portion of it was restored up to the end the year under review.

(*b*) Uncurrent coin received for recoinage during the year amounted, nominally, to R1,32,59,128 as detailed below—

Classification.			Nominal value in rupees.
Government rupees and half-rupees of 1835			5,92,559
Ditto	ditto	1840 (1st issue)	21,20,934
Ditto	ditto	1840 (2nd issue)	92,78,119
Ditto	shroff-marked, defective and dumb coins		3,30,375
Ditto	worn coins		8,91,968
Ditto	reduced rupees and half-rupees		40,913
Arcot coins			4,118
Confiscated coins			142
		Total	1,32,59,128

(*c*) Recoinage into Government rupees of the silver currency of Native States.

The recoinage of the silver currency of the Karauli Durbar was carried out during the year. The exchange value in Government rupees of the amount converted was R 6,39,202.

4. *Coinage*—

(*a*) The Government coinage for the year consisted of rupees only and amounted to R12,17,23,238.

The amounts paid were distributed as under:—

	R
On Government account	12,10,84,036
On account of Native States	6,39,202

(*b*) 497,630 fifty-cent. pieces were coined for the Straits Settlements Government from silver received in the previous year and shipped to the Colonial Secretary, Singapore.

(*c*) The whole of the coinage was found by the Assay Master to be within legal remedy for weight and fineness.

5. *Meltings.*—Uncurrent silver coins received from treasuries, as well as the Mexican dollars and some fine silver received from the Secretary of State, were issued to the Standard Melting Department in direct alligation during the year.

6. *Percentage of good coin.*—The percentages of good coin calculated on the amounts laminated were as detailed in the margin. The result shows a marked improvement in the case of rupees as compared with that of 1904-05.

Description of coin.	Weight of ingots laminated. Tolas	Percentage of good coin.
Government rupees	180,132,566	69·31
Fifty-cent. pieces	948,976	62·44

7. *Silver operative losses.*—After allowing for dirt on coins used in direct alligation the combined operative losses of the Melting and Coining Departments amounted in the case of Government rupees to R1,41,073. On making the necessary corrections on account of fictitious gains and losses, there is a net loss of R77,581, equal to 43·07 per lakh laminated This loss is higher than usual, but would have been greatly reduced if it had been possible to refine all the drosses of the Melting Department pertaining to last year. Owing to pressure of work in this department, which was heaviest from December 1905 to March 1906, dross valued at about R10,000 was left unrefined at the close of the year, and will be brought to account during present year.

COPPER.

8. No copper coinage was carried out during the year.

MISCELLANEOUS.

9. *Miscellaneous work.*—This consisted of the recurring supply of medals to various public institutions and rifle associations, the manufacture and adjustment of scales and weights and miscellaneous supplies and repairs undertaken for Government and the public. The profit was R711 as per statement III. In addition to the above 107 war medals, with 158 clasps, were issued to various military officers, after inscribing the names, rank and corps of the recipients thereon. No charge was made for this work.

10. *Mint working standards.*—The weights in all the departments were periodically compared with the standards, and any difference found carefully adjusted.

11. *Treasure trove coins.*—During the year 214 gold, 75 silver and 2 copper coins found in the Thana, Ahmedabad and Ahmednagar districts were forwarded to the Mint by the Bombay Branch, Royal Asiatic Society, for disposal to numismatists.

ANALYSIS OF REVENUE AND EXPENDITURE.

12. *Revenue :—*

(*a*) *Charges levied, Mint seignorage.*—The seignorage on silver tendered for the coinage of fifty-cent pieces amounted to R9,138.

(*b*) *Gain on coinage operations.*—The gain on this head was R1,05,174, and was more than that of the preceding year by R13,544.

(*c*) The charge of 2 per cent. on the total coinage of rupees for the year amounted to R23,19,922, exceeding that of the previous year by R9,58,657.

(*d*) *Cash and transfer charges*—These charges amounted to R29,544, and were less by R4,773 than those of the year 1904-1905. This was owing to the charges in connection with shipments of coin to Singapore during the year under review being much smaller than during the previous year.

13. *Balances sunk in the Mint.*—The balance of silver bullion belonging to Government valued at one rupee per tola of standard fineness stood at the beginning of the year at R33,74,407, and at its close at R77,23,964. The average daily balance, exclusive of silver belonging to tenderers and to the Currency department, was R27,36,807. The minimum balance was R9,42,023 on the 19th June 1905, and the maximum was R92,41,108 on the 16th March 1906.

14. *Expenditure :—*

(*a*) *Loss on coinage.—*

(i) *Gold.*—Instructions having been issued by the Comptroller-General that all gold coins received from the public at nominal value should also be held at the same value, instead of at bullion value as hitherto, there was no loss recorded in the Mint under this head during the year under review.

(ii) *Silver.*—The difference between the par and the weight value of uncurrent coin received from Government treasuries for recoinage amounted to R1,93,658 as against R1,33,879 in the preceding twelve months, the increase being due to heavier withdrawals of uncurrent coin.

(*b*) *Cost of Establishment.*—The total expenditure on salaries and establishment for the year as compared with that of the preceding year, is shown in the margin.

	1905-1906.	1904-1905.
	R	R
Fixed establishment . . .	1,85,256	1,72,313
Extra establishment and overtime work	1,19,881	1,10,047
TOTAL	3,05,137	2,82,360

(c) *Local and English Stores.*—This expenditure amounted to R1,38,207 and exceeded that for the preceding twelve months by R7,060, owing to the larger issues of nitric acid to Government departments.

(d) *Copper used for alloy.*—The amount expended under this head was R56,923 as compared with R71,420 for 1904-1905.

(e) *Contingent charges.—Miscellaneous.*—These charges amounted to R18,232, and were less than the figure for the previous year by R18,910 mainly on account of the landing charges on purchased silver having been excluded from the account this year.

(f) *Transfer charges.*—These amounted to R18,844 as compared with R14,075 in the preceding twelve months.

(g) Pro Formâ *charges.*—The amount of these charges for the year was R2,96,276 as against R2,75,357. The increase is due to the average silver and copper balances held in the Mint being larger than during the preceding year.

15. *Resumé of Revenue and Expenditure.*—The result of the transactions of the year, as summarised in statement I, shows that, including interest on capital outlay and *pro formâ* charges, the net profit from Mint operations during the year was R12,56,036 against R9,54,489, the increase being due to the heavier coinage of Government rupees.

16. *Capital Account.*—Rupees 27,126 on account of buildings and R16,503 on account of machinery were added to the heads of Buildings and Plant, respectively. The balance at debit of this account at the end of the year stood at R39,07,770.

The amount spent on additions to buildings includes R10,013 expended on the re-roofing of the Rolling department and R7,510 on additional stronghold accommodation. The additions to machinery comprise two double automatic balances and three bullion balances collectively valued at R9,948.

OFFENCES AGAINST THE COINAGE.

17. *Return of counterfeit coins.*—The usual return of counterfeit coins is appended to this report.

Four thousand nine hundred and thirty-seven counterfeit coins (4,759 rupees, 32 half-rupees, 112 quarters and 34 one-eighths) were received for examination during the year as against 2,349 in 1904-1905, and were classified as follows :—

(i) One thousand three hundred and fifty-four coins (620 castings and 734 struck) received from the Bombay, Baroda and Central India, Rajputna-Malwa, Southern Mahratta and Great Indian Peninsula Railways, and 93 coins (3 castings and 90 struck) received from other sources were accepted as "exceptionally well executed."

(ii) Six hundred coins (209 castings and 391 struck) were good enough to deceive the public, both as to execution and colour of metal.

(iii) The remaining 2,690 coins (2,424 castings and 466 struck) were in the majority of cases inferior specimens of low touch silver or base metal, and almost all easily detectable.

The second and third class include coins which were returned to the railways, as they did not come up to the standard of excellence required by Government.

The increase in the receipts of counterfeits during the year is largely due to the receipt of 1,310 rupees from the Treasury Officer, Salem, which were connected with the prosecution of a shroff in the Yercaud Sub-Treasury and were all palpable counterfeits ; also to 303 rupees received in a single parcel from the Agent to the Governor, Kathiawar, for examination (236 of which were King Edward VII rupees).

About 26 per cent of the coins received from the railways were imitations of King Edward VII rupees.

Two thousand and thirty-four counterfeit coins (1,620 rupees, 19 half-rupees, 94 quarters and 301 one-eighths) were discovered in remittances of uncurrent coin to the Mint.

During the year under report 24,267 courterfeit coins were cut at treasuries and railways as against 22,255 in 1904-1905.

I

ACCOUNT of the TOTAL REVENUE and EXPENDITURE of the BOMBAY MINT during the year 1905-06, referred to in paras. 2 and 3 of FINANCIAL RESOLUTION No. 3234, dated 5th October 1878.

REPORT ON THE WORKING OF HIS MAJESTY'S ASSAY OFFICE.

No. 182, Bombay, dated 15th August 1906.

From—Lieut.-Col. F. F. MACCARTIE, I.M.S., M.B., Assay Master, Bombay,

To—The Secretary to the Government of India, Finance Department.

I have the honour to submit the following report on the operations of the Assay Department, Bombay, for the official year 1905-06.

2. *Number and description of Assays.*—The number of assays during the year amounted to 51,861 as against 52,180 in the previous financial year. The details are shown in the following table:—

DESCRIPTION.	Number	Total.
GOLD.		
Assays on gold from all sources	1,432	
Check assays on fine gold	132	
	——	1,564
SILVER.		
Assays on silver received for coinage	4,262	
Ditto alligated for silver standard coinage	23,507	
Ditto pyx coins	9,388	
Ditto miscellaneous	12,624	
Check assays on fine silver	30	
	——	49,874
MISCELLANEOUS.		
Parting assays	26	
Assays on various metals and ores	370	
Assays on Mint drosses	27	423
TOTAL FOR THE YEAR	...	51,861

3. *Gold and silver assays.*—The total number of gold assays from all sources during the year was 1,564 as against 1,006 in the previous year; of these 132 assays were done for the Mint.

The total number of silver assays from all sources was 49,874 as against 50,165 in the previous year; of these 37,384 were done for the Mint.

4. *Meltings for silver standard coinage.*—Silver meltings for rupees were assayed during the whole of the year, and for 50 cents (half-dollars) in the month of April only.

The average fineness of the silver meltings was—

For rupees . . . . 915·902 per mille
" 50-cents . . . . 799·185 " "

as shown in the following tables:—

Months.		Rupees.	50 Cents (Half-Dollars).
April	1905	915·730	799·185
May	"	915·701	...
June	"	915·810	...
July	"	915·847	...
August	"	915·898	...
September	"	915·858	...
October	"	915·956	...
November	"	916·013	...
December	"	915·995	...
January	1906	915·904	...
February	"	915·865	...
March	"	915·946	...
Average for the year		915·902	799·185

5. *Gold in silver coinage.*—The average proportion of gold found by monthly parting assays in the silver pyx coins for the year was ·123 per mille for rupees, and .075 for 50-cent pieces.

6. *Pyx trials—Rupees.*—The trials of these coins for weight amounted to 1,256, the total number weighed being 25,140. One trial disclosed one coin below the legal remedy. Twenty fresh coins were weighed and found to be within remedy.

The average weight per piece was 180·018 grains; the lightest and heaviest coins weighed were, respectively, 179·10 and 180·90 grains.

The trials for fineness were also 1,256 in number, 6,305 coins having been assayed singly, and 31,525 in groups of 25 coins after melting. Of the coins assayed singly the extreme variations in fineness ranged from 914·6 to 918·6, and the average fineness over 6,280 coins was 916·640 per mille. The 31,400 coins assayed in groups of 25 after melting gave an average fineness of 916·592, the lowest and highest figures obtained for any melting of coins being, respectively, 915·3 and 917·8.

The average results are shown in the following table:—

Months.		Average weight of Pyx Rupees (grains).	Average fineness of Pyx Rupees (per mille).		Gold per mille.
			Single.	Melted.	
April	1905	180·003	916·583	916·533	·102
May	"	180·008	916·408	916·424	·223
June	"	179·991	916·378	916·600	·498
July	"	180·018	916·807	916·691	·217
August	"	180·001	916·722	916·578	·205
September	"	179·997	916·502	916·442	·193
October	"	180·017	916·722	916·580	·250
November	"	180·013	916·759	916·647	·102
December	"	180·005	916·850	916·758	·099
January	1906	180·007	916·577	916·527	·087
February	"	179·987	916·469	916·501	·084
March	"	180·084	916·646	916·612	·129
Average		180·018	916·640	916·592	·123

7. *Fifty-Cent pieces.*—There were only 5 trials of these coins for weight, the total number weighed being 120. One trial disclosed one coin below the legal remedy. Twenty fresh coins were weighed and found to be within remedy. The average weight per piece was 209·465 grains; the lightest and heaviest coins weighed were, respectively, 208·62 and 210·22 grains.

The trials for fineness were also 5 in number, 25 coins having been assayed singly, and 75 in groups of 15 coins after melting. Of the coins assayed singly the extreme variations in fineness ranged from 799·3 to 801·0, and the average fineness of the 25 coins was 799·996 per mille. The 75 coins assayed in groups of 15 after melting gave an average fineness of 800·300, the lowest and highest figures obtained for any melting of coins being 799·8 and 801·1 per mille.

The average results are shown in the following table :—

MONTH.	Average weight of Pyx 50-Cents (grains).	AVERAGE FINENESS OF PYX 50-CENTS (HALF-DOLLARS) PER MILLE.		Gold (per mille).
		Single.	Melted.	
April 1905	209·465	799·996	800·300	·075

8. *Summary of Pyx trials.*—The results detailed in paragraphs 6 and 7 are summarised in the following table :—

DENOMINATIONS.	Number of coins weighed singly.	Number of coins assayed singly.	Number of coins assayed after melting.	Average weight (grains).	Average fineness of coins assayed singly (per mille).	Average fineness of coins assayed after melting (per mille).	Proportion of gold in Pyx coins (per mille).
Rupees	25,140	6,305	31,525	180·018	916 640	916·592	·123
50-Cents (Half-Dollars) .	120	25	75	209·465	799·996	800·300	·075

9. *Miscellaneous Assays.*—Of the 370 assays under the head "Assays on various metals and ores" in paragraph 2 of this report, 363 were assays on counterfeit coins received from the Mint, Police and various Government offices.

10. *Verification of weight pieces.*—The Mint working standard sets of tola and avoirdupois weight pieces and 3 different sets of Assay Office pieces were verified during the year, their values being deduced from that of the Iridio-platinum Primary Standard.

11. Lieutenant-Colonel Milne, I.M.S., was in charge as Assay Master during the whole year under report.

GOVERNMENT OF INDIA

DEPARTMENT OF COMMERCE AND INDUSTRY

IMPORTS OF COTTON, WHEAT, LINSEED, INDIGO, JUTE, TEA, AND RICE

FREDERICK NOEL-PATON

Director-General of Commercial Intelligence

W. L. HARVEY

Secretary to the Government of India

Calcutta, December 14, 1906

GOVERNMENT OF INDIA.
DEPARTMENT OF COMMERCE AND INDUSTRY.

EMIGRATION.

DISCOURAGEMENT OF EMIGRATION FROM INDIA TO CANADA.

RESOLUTION—By the Government of India, Department of Commerce and Industry.

No. 9697—9709—112. Dated Calcutta, the 13th December 1906.

His Majesty's Secretary of State for India has communicated to the Government of India a request from the Governor General of Canada that emigration from India to Canada should be discouraged and that intending emigrants should be warned that there is no probability of their obtaining employment in that country and that in the event of their destitution, they are liable to deportation under the law of Canada.

2. The Governor General in Council accordingly requests all Local Governments and Administrations to make the above intimation generally known, particularly in places from which emigration to Canada is believed to be most common; and also to warn intending emigrants at the ports of embarkation of the risks they run in proceeding to that Colony.

The Secretary to the Government of Madras.
" " " " Bombay.
" " " " Bengal.
" " " " the United Provinces.
" " " " the Punjab.
" " " " Burma.
" " " " Eastern Bengal and Assam.
" Honourable the Chief Commissioner of the Central Provinces.
" Chief Commissioner of Coorg.
" " , Ajmer-Merwara.
" Honourable the Chief Commissioner of the North-West Frontier Province.
" Honourable the Agent to the Governor General in Baluchistan.

Ordered that a copy of the above Resolution be forwarded, for information and guidance, to the Local Governments and Administrations noted in the margin and to the Home and Foreign Departments, for information.

Ordered also, that a copy be published in the *Gazette of India* for general information.

W. L. HARVEY,
Secretary to the Government of India.

No. 3123 G.—Mr. W. H. J. Wilkinson, a Political Assistant of the 1st class, is granted privilege leave for 3 months, combined with furlough for 7 months and 13 days, with effect from the 20th December 1906, under Articles 233 and 308 (*b*) of the Civil Service Regulations.

No. 3125-G.—Mr. A. R. Jell, a Political Assistant of the 2nd class, is appointed to officiate as Under-Secretary to the Government of India in the Foreign Department, with effect from the 20th December 1906, *vice* Mr. W. H. J. Wilkinson, and during the absence on special duty of Mr. E. V. Gabriel, C.V.O, or until further orders.

No. 3965-F—The services of Lieutenant G. A G Shepherd are placed at the disposal of the Hon'ble the Chief Commissioner and Agent to the Governor-General in the North-West Frontier Province, for employment with Frontier Militia.

No. 5064-I.A.—Whereas for improving the sanitary condition of the Civil and Military Station of Bangalore it is proposed to demolish certain buildings in certain congested areas in the station and to erect new buildings in place thereof in certain new areas in the limits of the station.

And whereas it is expedient to provide for the grant of loans of money by the Government to persons evicted from such demolished buildings, to whom building sites in such new areas have been given for the purpose of enabling them to erect buildings thereon, and further to provide for similar grants to any persons desirous of obtaining the same for the purpose of enabling them to purchase building sites in such new areas and to erect buildings thereon. In exercise of the powers conferred by the Indian (Foreign Jurisdiction) Order in Council, 1902, the Governor-General in Council is hereby pleased to make the following law :—

1 (*1*) This law may be called the Bangalore Sanitary Improvements Loans Law, 1906.

(*2*) It extends to the Civil and Military Station of Bangalore as defined for the time being by Notification under the Bangalore Municipal Law, 1897.

2. In this Law "Collector" means the Collector of land revenue of the Civil and Military Station of Bangalore, or any officer empowered by the Resident in Mysore by name or by virtue of his office to discharge the functions of a Collector under this Law.

3. Subject to such rules as may be made under section 6, loans may be granted under this law by such officer as may from time to time be empowered in this behalf by the Resident in Mysore, for the purpose of enabling persons to whom building sites may have been given in the new areas referred to in the preamble to erect buildings thereon or to enable persons desirous of purchasing building sites in such areas and erecting buildings thereon, to purchase the same and to erect such buildings.

4. (*1*) Every loan granted under this Law shall be made repayable by instalments (in the form of an annuity or otherwise) within such period from the date of the actual advance of the loan or when the loan is advanced in instalments from the date of the actual advance of the last instalment as may, from time to time, be fixed by the rules made under this Law.

(*2*) The period fixed as aforesaid shall not exceed ten years

5. (*1*) Subject to such rules as may be made under section 6 all loans granted under his Law, all interest (if any) chargeable thereon and costs (if any) incurred in making the

same, shall, when they become due, be recoverable by the Collector in all or any of the following modes, namely:—

(*a*) From the borrower—as if they were arrears of land revenue due by him;

(*b*) From his surety (if any)—as if they were arrears of land revenue due by him;

(*c*) Out of the land for the purchase of which or for the erection of buildings on which the loan has been granted—as if they were arrears of land-revenue due in respect of such land;

(*d*) Out of the building for the erection of which the loan has been granted—as if the said building were property assessed to land revenue and the amount due to Government were an arrear of land revenue due thereon;

(*e*) Out of the property comprised in the collateral security (if any)—according to the procedure for the realization of land-revenue by the sale of immoveable property other than the land on which that revenue is due.

(*2*) When any sum due on account of any such loan, interest or costs is paid to the Collector by a surety or an owner of property comprised in any collateral security, or is recovered under sub-section (*1*) by the Collector from a surety or out of any such property, the Collector shall, on the application of the surety or the owner of that property (as the case may be), recover that sum on his behalf from the borrower, or out of the land for the purchase of which or of the building for the erection of which the loan has been granted or out of both in manner provided by sub-section (*1*).

(*3*) It shall be in the discretion of a Collector acting under this section to determine the order in which he will resort to the various modes of recovery permitted thereby.

6. The Resident in Mysore, with the previous sanction of the Governor-General in Council, may, from time to time, by Notification in the Local Official Gazette, make rules consistent with this Law to provide for the following matters, namely:—

(*a*) The manner of making applications for loans;

(*b*) The officers by whom loans may be granted;

(*c*) The manner of conducting enquiries relative to applications for loans and the powers to be exercised by officers conducting those enquiries;

(*d*) The nature of the security to be taken for the due application and repayment of the money, the rate of interest at which, and the conditions under which, loans may be granted, and the manner and time of granting loans;

(*e*) The inspection of lands or buildings in respect of which loans have been granted;

(*f*) The instalments by which, and the mode in which loans, the interest to be charged on them and the costs incurred in the making thereof, shall be paid:

(*g*) The manner of keeping and auditing the accounts of the expenditure of loans and of the payments made in respect of the same; and

(*h*) All other matters pertaining to the working of the law.

No. 5069-*I.-A.*—In exercise of the powers conferred by the Indian (Foreign Jurisdiction) Order in Council, 1902, the Governor-General in Council is pleased to make the following amendments to the Bangalore Municipal Law, 1897, promulgated in Foreign Department Notification No. 2175-I.-A., dated the 9th June 1897, namely:—

For the first proviso to sub-section (1) of section 41 *substitute*, "Provided that it shall be lawful for the President of the Municipal Commission to compound with persons living outside the municipal limits for a sum to be paid annually or half-yearly, in lieu of all tolls payable under the provisions of this law in respect of vehicles or animals entering the municipal limits, and the President shall issue licenses for such vehicles or animals; and while such licenses shall remain in force, such vehicles and animals shall be exempt from all tolls as aforesaid upon entering the municipal limits: provided always that such composition shall include all the vehicles and animals possessed by the person compounding."

2. In sub-section (1) of section 51 after the words "when the demand for the tax is made" *add* the words "or in the case of any tax levied, which, under any general or special bye-law or rule in force, is liable to be refunded, within seven days from the date of the order passed by the Commission regarding such refund."

No. 5071-*I.-B.*—In exercise of the powers conferred by the Indian (Foreign Jurisdiction) Order in Council, 1902, the Governor-General in Council is pleased to apply the Public Gambling Act, 1867 (III of 1867), to the Cantonments of Mhow, Nimach, and Nowgong (including the Civil lines), subject to any amendments to which the said Act is for the time being subject in British India and subject also to the following modifications:—

(1) The preamble and section 2 of the Act shall be omitted.

(2) All references to the Lieutenant-Governor or the Chief Commissioner in the said Act, except in section 1, shall be construed as referring to the Agent to the Governor-General in Central India.

(3) For the purpose of facilitating the application of the Act in each of the said Cantonments or Civil lines, any Court in any such Cantonment or Civil lines, may construe it with such alterations not affecting the substance as may be necessary or proper to adapt it to the matter before the Court.

L. W. DANE,
Secretary to the Government of India.

DEPARTMENT OF COMMERCE AND INDUSTRY.

NOTIFICATIONS.

RAILWAYS.

Calcutta, the 17th December 1906.

No. 9940.—In exercise of the powers conferred by section 2 of the Indian Railway Board Act, 1905 (IV of 1905), as in force in British India and as locally applied by Foreign Department Notification No. 1097-F., dated the 24th March 1905, the Governor General in Council is pleased to invest the Railway Board with all the powers or functions of the Governor General in Council under section 49 of the Indian Railways Act, 1890 (IX of 1890), in the matter of agreements with Railway Companies for the construction of rolling stock, plant or machinery used on, or in connection with, railways, or for leasing or taking on lease any rolling stock, plant, machinery or equipments required for use on a railway, or for the maintenance of rolling stock, subject to the condition that the Railway Board shall, in the exercise of the said powers or functions, act in accordance with the general rules or orders on the subject passed from time to time by the Government of India.

EXPLOSIVES.

The 18th December 1906.

No. 9924—47.—Assistant Commissary and Honorary Lieutenant John Shipman Rush is appointed Inspector of Explosives with the Government of India, substantively, on probation for a period of 3 years, with effect from the afternoon of the 12th December 1906, *vice* Honorary Lieutenant J. W. Turner.

GENERAL.

The 21st December 1906.

No. 10169—117.—Mr. T. O. Drake, Registrar of the Department of Commerce and Industry, is granted privilege leave for 2 months and 5 days, with effect from the 11th January 1907, combined with extraordinary leave for 3 months and 25 days under Article 233 (iv) of the Civil Service Regulations.

Mr. S. K. Murphy, a Superintendent in the Home Department, is appointed to officiate as Registrar of the Department of Commerce and Industry, with effect from the 11th January 1907, and during the absence on leave of Mr. T. O. Drake or until further orders.

CUSTOMS.

The 22nd December 1906.

No. 10123—30.—In exercise of the powers conferred by sections 22 and 23 of the Sea Customs Act, 1878 (VIII of 1878), in modification of the tariff values fixed by the Indian Tariff Act, 1894 (VIII of 1894), as amended by the Indian Tariff Act (1894) Amendment Act, 1896 (III of 1896), and as further altered from time to time by notifications of the Governor General in Council, the Governor General in Council is pleased to fix, with effect from the 1st January 1907, for the articles specified in column 2 of the Schedule hereto annexed, the tariff values stated in column 4 of the said schedule.

Provided that nothing in this notification shall affect any additional duty imposed under the powers conferred by sections 8A and 8B of the Indian Tariff Act, 1894 (VIII of 1894), as amended by the Indian Tariff Act Amendment Act, 1899 (XIV of 1899), the Indian Tariff (Amendment) Act, 1902 (VIII of 1902), the Indian Tariff (Amendment) Act, 1903 (XII of 1903), and the Indian Tariff (Amendment) Act, 1904 (XI of 1904).

49. Zephyr cloth	9	9
50. " striped and checked	11	3

Provided that any goods specified in the foregoing lists shall, when woven with borders of silk, be assessed to duty *ad valorem.*

EMIGRATION.

The 21st December 1906.

No. 10146—48.—The following draft of a Notification which it is proposed to issue in exercise of the powers conferred by section 80 of the Indian Emigration Act, 1883 (XXI of 1883), is published, as required by section 81 of the said Act, for the information of persons likely to be affected thereby, and notice is hereby given that the draft will be taken into consideration by the Governor General in Council on or after the 21st January 1907.

2. Any objection or suggestion which may be received from any person with respect to the draft before the date fixed aforesaid will be considered by the Governor General in Council.

Draft Notification

In exercise of the powers conferred by section 80 of the Indian Emigration Act, 1883 (XXI of 1883), the Governor General in Council is pleased to direct that in Scale No 2 (A) [Of Ordinary Provisions, showing the daily rations and the resulting weekly quantities per emigrant] of Schedule G, annexed to the Rules published with the Notification of the Government of India in the Department of Revenue and Agriculture, No 94-E, dated the 18th March 1886 [as subsequently amended], the following additions shall be made, namely:—

(1) After the words "(A) Of Ordinary Provisions" add the words "applicable to emigrant vessels sailing from ports other than Madras."

(2) At the end of the scale (A) insert the following :—

THE FOLLOWING SCALE OF ORDINARY PROVISIONS IS PRESCRIBED FOR EMIGRANT VESSELS SAILING FROM THE PORT OF MADRAS.

[In provisioning emigrant vessels, water, salt, tobacco and medical comforts shall be shipped for the whole voyage, dry provisions for issue, when cooking is impossible, for one-twentieth part of the voyage and ordinary provisions for the rest of the voyage. Two emigrants under ten years of age shall count as one emigrant.]

Showing the Daily Rations, and the resulting weekly quantities per emigrant.

Water (e)	1 gallon	...	7 gallons	..	.....						7 gallons	.	Tanks	From municipal hydrants.

(a) In the case of emigrants proceeding to places west of the Cape, or to Fiji *viâ* South Australia, fresh mutton (sheep) at scale rate shall be supplied for one week, dried fish for two weeks, and preserved mutton for the rest of the voyage. As one sheep weighing 60 lbs. yields about 25 lbs. of available flesh, four sheep are approximately equivalent to one week's supply of fresh mutton at scale rate for 100 emigrants, and shall be so reckoned in calculating requirements.

(b) In the case of emigrants proceeding to places east of the Cape, and to Fiji *viâ* Torres Straits, fresh mutton (sheep) at scale rate shall be supplied for one week, and dried fish for the rest of the voyage.

(c) In the case of emigrants proceeding to places west of the Cape, or to Fiji *viâ* South Australia, in lieu of fresh potatoes, 16 days' supply of preserved potatoes (at scale rates and according to rule of substitution) shall be shipped at Madras. In substituting dried preserved potatoes for fresh potatoes, one part by weight of preserved potatoes shall be reckoned as equal to four parts by weight of fresh potatoes.

(d) In the case of vessels proceeding to Colonies west of the Cape, five-sevenths of the allowance of mutton (sheep) and vegetables shall be taken at Madras, and two-sevenths the balance at the Cape or St. Helena.

(e) Of the whole quantity of water required for emigrants, Masters, officers and crew, cabin and other passengers, if any, and the live stock, a reduction of three-sevenths will be allowed when a condenser is carried, and further reduction of one-seventh if the vessel is to take water at an intermediate port.

N.B.—Excepting spirits or wine, no surplus articles of diet, or water, of a previous voyage shall be utilized as emigrant stores for any succeeding voyage.

TELEGRAPHS.

The 21st December 1906.

No. 10208—128.—In exercise of the powers conferred by section 7 of the Indian Telegraph Act, 1885 (XIII of 1885), the Governor General in Council is pleased to direct that, on and with effect from 1st January 1907, the following rules shall be substituted for the rules bearing the same numbers, published with the Notification of the Government of India in the Public Works Department, No. 298-Telegraphs, dated the 22nd September 1904, namely:—

Foreign Press Telegrams at reduced rates.

324. *United Kingdom.*—Telegrams containing news or intelligence for publication in newspapers are transmitted *viâ* Teheran or *viâ* Suez from the United Kingdom to India and Burma, and from Government Telegraph Offices in India and Burma to the United Kingdom, at reduced rates, subject to the following conditions, namely:—

(*1*) The newspapers, their correspondents or agents, shall address their telegrams to a registered newspaper, which shall be prohibited from selling, distributing or communicating such telegrams to clubs, exchanges or news-rooms, or disposing of them for any purpose whatsoever, directly or indirectly, other than for publication in registered newspapers.

(*2*) Telegrams at the reduced rate shall not be allowed to interfere with the transmission of telegrams at full rates, and in order to ensure this, the transmission of such news telegrams may be deferred, suspended, or interrupted, until any State or Private telegram, or any Press telegram at full rates which may be on hand, shall have been transmitted and completed. On the lines of the Indian Telegraph Department such telegrams shall take precedence with ordinary Inland telegram.

(*3*) No telegrams shall be transmitted at the reduced rate except for publication in a newspaper, and they shall be written in plain *English*, *French* or *German* or in the plain language in which is published the newspaper to which they are addressed, so as to be intelligible to the transmitting offices. Telegrams containing news or information not for publication, or containing Code words or groups of letters or figures, or words of concealed meaning, shall be paid for at the full rates in force for Private telegrams. Stock exchange and market quotations are admitted in press telegrams at reduced rates The Telegraph Offices of origin shall, in cases of doubt, assure themselves in communication with the sender, who is bound to give proof, that groups of figures appearing in the telegrams really represent exchange quotations.

(*4*) Telegrams shall be accepted only from the authorised correspondent of a newspaper, and the news sent in such telegrams shall be duly published in the newspapers, or satisfactory reasons be given for non-publication, in the absence of which full rates will be chargeable.

(*5*) All Press telegrams at the reduced rate shall be prepaid, except under special arrangements made by an authorised newspaper for a specially nominated correspondent.

(*6*) The reduced rate for Press telegrams shall apply only when all the above conditions have been satisfied, and any subsequent claim made for the difference between the reduced and full rates shall be satisfied immediately on demand.

325. *Multiple Press telegrams.*—Press telegrams can only bear a single supplementary instruction—that relating to multiple address telegrams. The charge to be collected for the copies to be made by the office of destination is the same as that for ordinary private telegrams. (Rules 295 and 296.)

W. L. HARVEY,

Secretary to the Government of India.

PART II.

Notifications by High Court, Comptroller General, etc.

GAZETTE OF INDIA.

NOTICE.

The 25th October 1906.

From the 10th November next till further notice, the complete *Gazette of India* will be published at Calcutta. After the 3rd November all notifications and other matter intended for publication in the *Gazette* should be addressed to the Publisher, 8, Hastings Street, Calcutta.

Attention is invited to the following Circular Memorandum of the Government of India, Home Department, of August 1901:—

"It has been brought to the notice of this Department that matter for the *Gazette of India* is sometimes sent to the Press late on Friday evenings for publication in the next day's *Gazette*, and that this involves considerable inconvenience to the Press and expense to Government. In the Circular Memorandum of this Department, No. 777—79, dated 9th February 1870, the Government of India directed that all notifications or other matter intended for insertion in the *Gazette of India* should be delivered at the Press not later than 2 P.M. on Friday, and that any papers sent thereafter must be certified to be extremely urgent in order to ensure their appearance in the next day's *Gazette*. The undersigned is directed to request that these orders may be more strictly observed in future, and that Departments will refrain from sending to the Press as extremely urgent any papers which can without harm or inconvenience be held over for the next *Gazette*."

J. P. HEWETT,
Secretary to the Government of India.

The 21st December 1906.

O. T. BARROW,
Comptroller General.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

INVENTIONS and DESIGNS.

Calcutta, the 20th December 1906.

NOTIFICATIONS.

No. 5006 P.—APPLICATIONS in respect of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act during the week ending 17th December 1906:—

No. 607 of 1906.—Gustave Fouillaron, manufacturer, of 5 Rue Richepanse, Paris. *Improvements in and relating to expanding pulleys and belts therefor.*

No. 608 of 1906.—Robert Maximillian Hahn, merchant, of 129 Cheapside, in the city of London. *An improved oleaginous mixture for sprinkling on roads and the like.*

No. 609 of 1906.—Herbert Wilfred Perry, late executive engineer and now District Traffic Superintendent in the employ of the South Indian Railway Company, and residing at Trichinopoly in the Madras Presidency. *An improved direct system of signalling trains.*

No. 610 of 1906.—Henry Beardmore, engineering workshops foreman, South Indian Railway Company, Limited, Trichinopoly. *An improved facing point lock.*

No. 611 of 1906.—Henry Foster Josephs, contractor, care of Messrs. Clements, Robson and Company, Karachi. *Improved screen for cleaning and separating from wheat, oil seeds and foreign matter, by means of a plurality of screens.*

No. 612 of 1906.—William Snee, mechanical engineer, of West Elizabeth, in the county of Allegheny, state of Pennsylvania, United States of America. *Improvements in wave-propelled motors.*

No. 613 of 1906.—Kadernath Mondul and Hira Lal Mondul, tradesmen and landholders, of 5-3 Baisnavpara lane, Khooroot, Howrah, or 77 Clive street, Calcutta. *Hand wheel bomar presses for pressing of loose jutes from two maunds up to the weight of four and a half maund in bales.*

No. 614 of 1906.—George Westinghouse, manufacturer, of Westinghouse building, Pittsburg, Pennsylvania, United States of America. *Improvements in draft gear for vehicles.*

No. 615 of 1906.—British-American Tobacco Company, Limited, of Cecil Chambers, 86 Strand, London, W. C. *Improvements in mouthpiece cigarette machines.*

No. 616 of 1906.—Henri Pataud, civil engineer, of 15 Rue de la Federation, Paris, in the Republic of France. *Improvements in wheel fellies.*

No. 5007 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, United Provinces of Agra and Oudh. These and other specifications are open to public inspection from 11 A.M. to 3 P.M. at the Secretary's office, 2 Bankshall Street, Calcutta, on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 226 of 1906.—Gangadhar Ramchandra Mangrulkar, clerk, Postal Department, Lady Jamshedji road, Mahim, Bombay, British India. *Improvements in the manufacture of matches.* (Specification filed 4 December 1906.)

No. 231 of 1906.—Madan Lall Kapoor, manufacturer, of Peshawar city, North-West Frontier Province. *Hand treadle or power loom (weaving machine).* (Specification filed 10 December 1906.)

No. 241 of 1906.—Minerals Separation, Limited, of 62 London Wall, in the city of London, England. *Improvements in or relating to dry concentration of ores* (Specification filed 5 December 1906.)

No. 243 of 1906.—Parascheva Sechiari, engineer, of 17 rue du Louvre, Paris, France. *Improvements in driving belts and coverings for friction wheels.* (Specification filed 5 December 1906.)

No. 244 of 1906.—Charles Anthony Vandervell, electrical engineer, of Chapter Works, Chapter road, Willesden, London, N. W., England, and William Henry Warden Proctor, engineer, of Elvaston, St. Patricks road, Coventry, Warwickshire, England *Improvements in or relating to dynamos or the like.* (Specification filed 5 December 1906.)

No. 294 of 1906.—Robert Greig Kennedy, late chief engineer of the Irrigation Department, Punjab, India, of Largo, in the county of Fife, Scotland *An improved device for controlling a supply of water for irrigation and other purposes.* (Specification filed 3 December 1906)

No. 412 of 1906.—Kadernath Mondul and Hiralal Mondul, tradesmen and landholders, of Baisnavpara lane, Khooroot, Howrah, carrying on business both at the said place as well as at No 77 Clive Street, Calcutta. *Hand wheel bomar press for pressing of loose jutes in one bundle of one and a half maund in weight.* (Specification filed 26 November 1906)

No. 462 of 1906—Ozonair, Limited, manufacturers, of 27 Chancery lane, London, England. *Improved apparatus for ozonizing atmospheric air.* (Specification filed 3 December 1906)

No. 463 of 1906.—Dick Edwards Radclyffe, ramie specialist, of Hythe End, Staines, in the county of Middlesex, England *New or improved process appliances and machinery to decorticate, scutch and de-gum fibres more especially ramie, rhea and the like* (Specification filed 3 December 1906.)

No. 501 of 1906.—Josef Franz Kuhnel, engineer, care of Henke's Tile Works, Feroke A G, Feroke, Malabar, Southern India (at present absent from British India) *Process of manufacturing mosaic tiles.* (Specification filed 8 December 1906)

No. 537 of 1906.—Andre Helbronner, doctor of science, and Ernest Alfred Vallee, chemist, both of 6 rue des Petits Hotels, Paris, in the republic of France *Improvements in or relating to the treatment of ossein.* (Specification filed 8 December 1906)

No. 541 of 1906.—William Youlten architect, of 159 Victoria street, Westminster, in the county of London, England *Improvements in means for separating dirt and the like from the refuse and waste of cotton cleaning machines and from other materials.* (Specification filed 6 December 1906)

No. 542 of 1906.—George Farquhar and Robert North, food preservers, both of 12a Shenton street, London, England *Improvements in and relating to devices for hermetically sealing metal receptacles for food and the like* (Specification filed 6 December 1906.)

No. 5008 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 297 of 1895.—Prabhu Lal. *Best blanch pipe-clay for whitening articles of buff or buck skin leather.* (From 28 January 1907 to 28 January 1908.)

No. 432 of 1899.—James Ernest Hickmott *An improved method of constructing the pans of lime or soorkey mills.* (From 22 December 1906 to 22 December 1907.)

No. 119 of 1900.—Arthur Boyd Price *An improved centring for the formation of concrete floors, arches, tunnels, drains, etc, to be called "Price's patent centring."* (From 13 December 1906 to 13 December 1907.)

No. 329 of 1901.—Joseph William Gilbert Alford and Bridget Catherine Martin. *Improvement in and relating to ventilation by window openings.* (From 21 December 1906 to 21 December 1907.)

No. 422 of 1901—The Westinghouse Brake Company, Limited *Improvements in electrical interlocking apparatus for railway signalling.* (From 29 January 1907 to 29 January 1908.)

No. 311 of 1902.—John Alves *Improvements in and in connection with smoke consuming apparatus for steam boiler and other furnaces.* (From 19 December 1906 to 19 December 1907.)

No. 389 of 1902.—The Firm of Samuel Zickenziger. *Improvements in incandescent gas lamps.* (From 16 December 1906 to 16 December 1907.)

No. 5009 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2), of the said Act the exclusive privilege of making, selling, and using the said inventions in British India, and of authorising others so to do, has ceased —

No. 92 of 1901.—George Morris *Patent purdah rests and hold downs.* (Specification filed 18 April 1901.)

No. 93 of 1902.- George Waters Pitt and Edward Martin *Improvements in or relating to wheels and tyres for vehicles* (Specification filed 11 September 1902.)

No. 293 of 1902—Samuel Robert Baildon. *Improvements in and connected with punkahs.* (Specification filed 8 September 1902.)

No. 303 of 1902.—George Smith Heatley. *Improvements in bedsteads and mattresses* (Specification filed 10 September 1902.)

Fee in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof —

The sum of R50 for each of the above invention.

No. 290 of 1901.—Oesterreichische Gasgluhlicht and Electricitats Gesellschaft *Improved means for supporting the osmium filaments of electric incandescent lamps.* (Specification filed 9 September 1901.)

Fee in respect of the continuance of an exclusive privilege—

4 (*b*) After the expiration of the fourth year and before the expiration of the fifth year from the date of the filing of the specification—

The sum of R50 for the above invention.

NOTICES.

All communications relating to applications for leave to file specifications and for registration of designs under the Inventions and Designs Act, 1888 (V of 1888), or in continuation of such applications, should be addressed to the Patents Secretary, 2, Bankshall Street, Calcutta.

The Office of the Secretary under the Inventions and Designs Act, 1888, will in future be open for the transaction of business from 11 A.M. to 3 P.M. on all days, except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Cheques and money orders will only be accepted if made payable *at Calcutta* to the Secretary under the Inventions and Designs Act.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's Office are now on sale to the public at one anna and eight annas a copy, respectively. A consolidated index for the year 1905, entitled "Inventions and Designs in 1905," is also on sale, price one rupee It contains a chronological list, subject-matter and name indexes of exclusive privileges for inventions, which have been obtained or applied for in that year, together with lists of designs applications

---

Attention is requested to the rules made by the Government on the 10th October 1895 in regard to the preparation of applications, specifications and drawings

---

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1806) lie in the visitors' room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified: or, if the 10th day is a holiday, till the evening of the office day next following

---

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

The Inventions and Designs Act (V of 1888), with the notifications and rules issued under its provisions and the notices of the office of Inventions and Designs, to which is added an explanatory memorandum for the guidance of persons applying for protection of Inventions and Designs. Royal 8vo volumes, paper cover, 13 annas or 1*s*. 1*d*. Postage extra. To be had of the Superintendent, Government Printing, 8, Hastings Street, Calcutta, or of the Superintendent, Patents Branch, Department of Commerce and Industry, 2, Bankshall Street, Calcutta.

The Patents Office will be closed to the public from 3 P.M., 22nd December 1906, to 11 A.M., 2nd January 1907.

H. G. GRAVES,
Secretary under the Inventions and Designs Act, V of 1888.

SULPHATE OF QUININE AND SULPHATE OF CINCHONIDINE.

Manufactured at the Bengal Government Cinchona Plantation.

These articles are guaranteed to be free from wilful admixture with other Cinchona Alkaloids. Quinine is for sale only to Government officers. Cinchonidine is for sale to Government officers and to dealers. Both Quinine and Cinchonidine are for sale for cash only and may be obtained from the Superintendent, Royal Botanic Garden, Sibpur, near Calcutta.

The rates from 1st April 1906 are as under.—

To Government officers.

THE HONOURABLE THE AGENT TO THE GOVERNOR GENERAL IN BALUCHISTAN.

NOTIFICATIONS.

Quetta, the 10th December 1906.

No. 5961.—In exercise of the power conferred by section I, sub-section 3 of the Indian Petroleum Act, 1899 (VIII of 1899), the Honourable the Agent to the Governor-General is pleased to apply to the territories administered by him as such Agent so much of the said Act as does not already apply to the said territories.

The 13th December 1906.

No. 6009.—Captain R. H. Palin, Assistant Cantonment Magistrate, Quetta, has been declared by the Central Committee of Examination, Punjab, to have passed the Departmental examination of Cantonment Magistrates and Assistant Cantonment Magistrates held on the 10th of October 1906, in Group B by the Higher Standard.

By order,
A. L. JACOB, Captain,
First Assistant.

THE HONOURABLE THE AGENT TO THE GOVERNOR-GENERAL IN BALUCHISTAN.

NOTIFICATION.

Dated Quetta, the 11th December 1906.

No. 5982.—The following draft rules framed in exercise of the powers conferred by section 9 of the Indian Petroleum Act, 1899 (VIII of 1899), which it is proposed to issue are published for the information of all persons likely to be affected thereby. Notice si hereby given that the said draft rules will be taken into consideration on or after the 1st February 1907.

2. Any objection or suggestion which may be received from any person with respect to the said draft rules before the date aforesaid will receive consideration.

By order,
A. L. JACOB, Captain,
First Assistant.

8. Storage of crude petroleum in bulk.
9. Dangerous petroleum for use on motor vehicles.
10. Storage by local authority.

CHAPTER IV.—OF LICENSES FOR THE TRANSPORT OF PETROLEUM.

CHAPTER V.—FEES.

DRAFT RULES UNDER SECTION 9 OF THE INDIAN PETROLEUM ACT, 1899, FOR THE IMPORTATION POSSESSION AND TRANSPORT OF PETROLEUM IN THE TERRITORIES ADMINISTERED BY THE AGENT TO THE GOVERNOR-GENERAL IN BALUCHISTAN.

PART I.

PRELIMINARY.

Definition.

1. In these rules,—

(a) "Part" means a part of these rules:

(b) "petroleum in bulk" means petroleum in quantities exceeding five hundred gallons, contained in any one receptacle;

(c) "installation" means a place specially prepared for the storage of petroleum;

(d) "major installation" means an installation—

(1) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, exceeding fifty thousand gallons, or

(2) in which tin-making operations are carried on;

(e) "minor installation" means an installation—

(1) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, not exceeding fifty thousand gallons, and

(2) in which no tin-making operations are carried on;

(f) protected works" includes buildings in which persons dwell or assemble, timber yards, other petroleum stores, and any other place which the Local Government may declare as such by Notification;

(g) "motor-vehicles" includes a motor bicycle, and a motor tricycle; and

(h) "owner" as applied to a motor-vehicle, includes a person who hires, or is otherwise entitled for the time being to use or work, a motor-vehicle.

PART II.

POSSESSION AND TRANSPORT OF PETROLEUM.

CHAPTER I.—POSSESSION OF PETROLEUM.

Smoking prohibited.

1. No smoking shall be permitted inside any installation.

Supervision of operations within installation.

2. All operations within any installation shall be conducted under the supervision of a responsible Agent or Supervisor.

Cleanliness of installation.

3. The ground in the interior of an installation shall be kept clean and free from goods of a combustible nature, vegetation and rubbish.

Supply of sand in installation.

4. A sufficient supply of sand shall always be kept in an installation for the purpose of extinguishing fire.

Enclosure walls and embankments.

5. All enclosure walls and embankments required to be constructed by or under these rules shall be certified as being sufficient to ensure safety by a Railway Engineer in the case of installations constructed on Railway premises, and in the case of other installations by an Engineer accepted as qualified for this purpose by the Local Government.

Marking of capacity of tanks.

6. The capacity in gallons of every tank and storage shed or godowns in an installation shall be conspicuously marked on it, and shall be calculated as follows:—for tanks, at the rate of 6·25 gallons per cubic foot; for sheds and godowns, at the rate of 10 gallons per 3 cubic feet.

Protection from lightning.

7. Every tank or other receptacle for the storage of petroleum in bulk, except a tank or receptacle which is not of sufficient capacity to contain ten thousand gallons of petroleum and which is so situated as not to be liable to cause danger in the event of the petroleum being ignited, shall be protected by an efficient lightning-conductor.

Explanation.—A tank or receptacle shall be deemed to be so situated as not to be liable to cause danger in the event of the petroleum being ignited, if it is not in close proximity to any other tank or receptacle, or to any building and if it is surrounded by a wall, or moat, or combination of both, sufficient to prevent the flow of petroleum beyond certain circumscribed limits in the event of the escape of the whole contents of the tank when full.

Testing of lightning-conductor by licensee.

8. Not less than once in every year the licensee of an installation shall test or cause to be tested the efficiency of the conductor in such manner as the authority granting the license may, by general or special order, declare to be sufficient, and a certificate showing the date of the last test shall be posted in a conspicuous place within the installation.

Official testing of lightning-conductor.

9. Any officer appointed by a Local Government in this behalf may enter any installation for the purpose of testing the efficiency of the conductor, at any time after sunrise and before sunset.

Time for work in installations.

10. No installation shall be open, and no work in any installation shall be permitted, between sunset and sunrise: provided that in cases where electric lighting is exclusively used, night working may be permitted by the Local Government on the recommendation of the Chief Inspector of Explosives.

Closure of pipes and openings.

11. Where there are any pipes or openings for draining out water in any enclosure wall, arrangements shall be made whereby they can be closed, and they shall only be kept open when actually necessary for drainage purposes. The nature of such arrangements shall be shown in the specifications submitted with the application for a license.

Materials for sheds and godowns.

12. All sheds or godowns in an installation for the storage of oil in tins, drums or cases shall be built of uninflammable material.

Posting up of rules and conditions.

13. There shall be hung up in a conspicuous place in every installation for which a license has been granted, copies, in English and the Vernacular, of the rules contained in this Part, and of the conditions endorsed on the license.

CHAPTER II.—GENERAL PROVISIONS RELATING TO LICENSES.

Applications for licenses.

1. All applications for licenses for the possession or transport of petroleum shall be made to the District Magistrate.

Licensing authority.

2. Licenses (*a*) for the possession or transport of dangerous petroleum in quantities not exceeding forty gallons, (*b*) for the possession of transport of petroleum, not being dangerous or crude petroleum nor petroleum in bulk, and (*c*) for the possession of petroleum, in bulk or otherwise, in a minor installation, may be granted by a District Magistrate or by such other authority as the Local Government may from time to time by order in writing appoint in this behalf. In all other cases the licensing authority shall be the Local Government.

Refusal of license.

3. The licensing authority may, for reasons to be communicated to the applicant, refuse a license in any case: provided that when a license is refused by any authority other than the Local Government, such refusal shall be reported to the Local Government.

Forfeiture of license.

4. Every license granted under these rules shall be liable to be forfeited for any contravention of the Act, or of any rule thereunder, or of any condition contained in such license, or for any other reason deemed by the licensing authority to be good and sufficient, and recorded by him in writing.

5. Every license and pass granted under these rules shall be held subject to the conditions endorsed on it, and shall contain all the particulars required to be entered on it by the form prescribed for it under these rules.

Particulars of license.

6. (1) Every application for the renewal of a license shall be made in the same manner as an application for an original license.

Renewal of licenses

(2) Every such application shall be made at a date not less than fifteen days before the date on which the original license expires.

(3) The same fee shall be charged for the renewal of a license as for a new license.

7. When any license is granted for the possession or transport of petroleum a copy of the rules contained in Chapter I of this Part in the case of a license for possession, and rule 10 of Chapter IV of this Part in the case of a license for transport, printed in English and the Vernacular, shall be given, together with the license, to the licensee.

Supply of rules to licensee.

CHAPTER III.—LICENSES FOR THE POSSESSION OF PETROLEUM.

1. Save as provided in rule 10 of this Chapter, every license for the possession of petroleum shall remain in force until the 31st of December next following the date of issue of the license.

Continuance of license

2. Licenses for the possession of petroleum, not being dangerous petroleum, otherwise than in bulk, may be granted in Form A

Petroleum not in bulk, other than dangerous petroleum

3. (1) The holder of a license in Form A may, at any time before the expiry of the license, apply for permission to transfer his license, to another person.

Transfer of certain licenses

(2) Such application shall be made to the District Magistrate, who shall, if he approves of the transfer, enter upon the license, under his signature, an endorsement to the effect that the license has been transferred to the person named.

(3) A fee of R5 shall be charged on each such application.

(4) The person to whom the license is so transferred shall enjoy the same powers and be subject to the same obligations under the license as the original holder.

4. Licenses for the possession of dangerous petroleum not in bulk in quantity exceeding forty gallons may be granted in Form B

Dangerous petroleum not in bulk

5. Licenses for the possession of dangerous petroleum in quantity not exceeding forty gallons may be granted in Form C

Dangerous petroleum not exceeding forty gallons.

6. Licenses for the possession of any stated quantity of petroleum in major installations in accordance with such specifications and plans as may be approved by the Local Government, on the recommendation of the Chief Inspector of Explosives, may be granted in Form D.

Storage in major installations

7. Licenses for the possession of any stated quantity of petroleum in minor installations in accordance with such specifications and plans as may be approved by the Local Government on the recommendation of the Chief Inspector of Explosives, may be granted in Form E.

Storage in minor installations

8. Subject to such conditions as may be prescribed by the Local Government in each case, licenses in Form F may be granted to any person engaged in the extraction of petroleum from wells for the possession of any quantity of crude petroleum in any place of storage at or near such wells.

Storage of crude petroleum in bulk

9. (1) Licenses in Form G may be granted free of charge for the possession of dangerous petroleum for use on motor-vehicles and for its transport thereon, for the purpose of use therein.

Dangerous petroleum for use on motor-vehicles.

(2) Save in the cases provided for by the conditions of the license, the provisions of the ordinary rules relating to the possession of dangerous petroleum shall regulate the possession of dangerous petroleum for use on motor-vehicles.

10. Licenses for the possession of petroleum in an installation may be granted free of charge to any local authority, subject to such conditions and for such period, as the Local Government may direct.

Storage by local authority

CHAPTER IV.—LICENSES FOR THE TRANSPORT OF PETROLEUM.

1 General licenses for the transport of petroleum, other than dangerous petroleum, may be granted for a period of twelve months in Form H.

General licenses for the transport of non-dangerous petroleum.

General licenses for the transport of dangerous petroleum.

2. General licenses for the transport of dangerous petroleum otherwise than in bulk may be granted for a period of twelve months in Form I.

Effect of general license.

3. Licenses granted under rules 1 and 2 of this Chapter may authorise the holder to transport petroleum without restriction as to destination or total quantity.

Pass for transport of petroleum.

4. The holder of a general license granted under rules 1 or 2 of this Chapter shall, with each consignment of petroleum conveyed under cover of his license, issue to the person who takes charge of the petroleum for the purpose of transporting it a numbered Pass in Form J.

Special licenses for the transport of petroleum other than dangerous petroleum.

5. Special licenses may be granted for the transport of petroleum, other than dangerous petroleum, in quantities exceeding five hundred gallons, in Form K.

Special licenses for the transport of dangerous petroleum.

6. Special licenses may be granted for the transport of dangerous petroleum other than in bulk in Form L.

Effect of special license.

7. A special license granted under rules 5 and 6 shall only cover the transport of the particular consignment entered in the license.

Particulars to be given in applications for special licenses.

8. Applications for special licenses for the transport of petroleum by rail, or by road or by both shall specify the description and quantity of petroleum to be transported, and the places from and to which, respectively, the petroleum is to be conveyed, and shall describe the receptacles in which it is to be contained.

Transport of dangerous petroleum by motorists otherwise than on a motor-vehicle.

9. Licenses in Form M. to transport dangerous petroleum, otherwise than on a motor-vehicle, may be granted to owners of motor-vehicles holding licenses under rule 9, sub-rule (1) of Chapter III of this Part, to possess petroleum and use or transport it on a motor-vehicle.

Validity of license granted in another Province.

10. Petroleum may be transported within the territories administered by the Agent to the Governor-General in Baluchistan as such Agent under cover of a license granted by the prescribed authority in any other province, provided that the conditions of such license are observed throughout the period during which the petroleum is in transit.

CHAPTER V.—FEES.

Method of levying fees.

1. (1) Where the proceeds of fees leviable for licenses under these rules have been assigned by the Local Government to any local authority, the fees shall be levied in such manner as the local authority may from time to time direct.

(2) In all other cases the fees shall be levied by means of impressed stamps.

(3) An application for the grant or the renewal of a license shall bear the proper stamp, and, if it be refused, the value of the separate stamp (if any) which may have been already provided by the applicant for the desired license or renewed license, minus the deductions prescribed by section 54 of the Indian Stamp Act, 1899 (II of 1899), may be refunded to the applicant. An application should not be made on the stamped paper intended for the license or renewed license; but, where this has been wrongly done, the value of the stamp may be refunded minus—

(i) the value of the stamp which should have been affixed to the application, and

(ii) the deductions prescribed as aforesaid.

Fees for licenses for possession of petroleum.

2. The following fees shall be charged for licenses for the possession of petroleum, namely: —

Non-dangerous petroleum.

	R	
(a) When the quantity to be stored, exceeds five hundred but does not exceed one thousand gallons.	12	
(b) When the quantity to be stored exceeds one thousand but does not exceed five thousand gallons.	12	for the first one thousand gallons plus R2 for every additional one thousand gallons or part thereof.
(c) When the quantity to be stored exceeds five thousand gallons, but does not exceed fifty thousand gallons.	20	for the first five thousand gallons plus R4 for every additional one thousand gallons or part thereof.
(d) When the quantity to be stored exceeds fifty thousand gallons	250	

Dangerous petroleum.

	R	
(e) When the quantity to be stored does not exceed forty gallons	3	
(f) When the quantity to be stored exceeds forty gallons, but does not exceed five hundred gallons	8	
(g) When the quantity to be stored exceeds five hundred gallons.		the same fees as those laid down for non-dangerous petroleum.

Fees for licenses for transport of petroleum

3 The following fees shall be charged for licenses for the transport of petroleum.

Non-dangerous petroleum

Special license—

	R
(a) When the quantity to be transported exceeds five hund ed but does not exceed five thousand gallons	1
(b) For every addition d five thousand gallons or part of five th[illegible]d gallons	1
General license for the transport of non-dangerous petroleum by rail or by road, for twelve months	100

Dangerous petroleum.

Special license—

	R	
(i) When the quantity to be transported does not exceed forty gallons	2	
(ii) When the quantity to be transported exceeds forty gallons, but does not exceed four hundred and eighty gallons	2	for the first forty gallons *plus* 8 annas for every additional forty gallons or part thereof
(iii) When the quantity to be transported exceeds four hundred and eighty gallons	8	for the first four hundred and eighty gallons *plus* R2 for every additional four hundred and eighty gallons or part thereof
General license for the transport of dangerous petroleum by the owner of a motor-vehicle by road or rail up to a maximum of sixty gallons	5	
General license for the transport of dangerous petroleum by dealers by rail or road	100	

FORM A.

(Rule 2 of Chapter III of Part II)

License to possess petroleum (other than dangerous petroleum), otherwise than in bulk.

No. Fee, Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or authority appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM A

CONDITIONS OF THE LICENSE

If the licensing officer call on the holder of a license, by a notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice

2. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors

3 Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building.

A combination of these methods is permissible.

4. The following distances shall be kept clear round the building :—

Distances to be kept clear round buildings or enclosure walls.				Number of gallons to be stored.		
Not less than	15	feet	over	5,000 and under.		
"	20	"	"	5,000 and up to		15,000
"	30	"	"	15,000	"	30,000
"	40	"	"	30,000	"	50,000
"	60	"	"	50,000	"	75,000
"	80	"	"	75,000	"	100,000
"	100	"	"	100,000	"	150,000
"	150	"		Unlimited.		

5. No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted within the installation.

FORM B.

(Rule 4 of Chapter III of Part II)

License to possess dangerous petroleum, otherwise than in bulk, in quantity exceeding forty gallons.

No. Fee, Rs.

License is hereby granted to for the storage, in the place described below, of gallons of dangerous petroleum, subject to the rules for the storage of petroleum, published in Notification No. , dated , and to the further conditions on the back of this license.

First Assistant to the Hon'ble the
Agent to the Governor-General

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM B.

CONDITIONS OF LICENSE.

1. If the licensing officer call upon the holder of a license, by notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of the Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which petroleum must be contained.

3. The petroleum shall be stored in gas-tight tinned or galvanized sheet iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight under-cap. Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet iron or steel, and have the following thickness of metal :—

(1) When the capacity does not exceed two gallons, not less than 25 B. W. G.
(2) When the capacity exceeds two gallons, but does not exceed four gallons, 22 B. W. G.
(3) When the capacity exceeds four gallons, 16 B. W. G.

4. An air-space of at least one-tenth of its capacity shall be left in each receptacle at the time of filling.

5. The receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be labelled in accordance with the provisions of section 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors

9. Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building.

A combination of these methods is permissible.

10. All ventilating openings in the building shall be protected by strong wire gauze.

11. No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

12. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

13. Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary, and shall prevent any other person from doing such act.

14. The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

15. The following distances shall be kept clear from protected works round the place of storage :—

Quantity to be stored.	Distances to be kept clear when dangerous petroleum is stored in drums of not greater capacity than 4 gallons.	Distances to be kept clear when dangerous petroleum is stored in drums of capacity exceeding four gallons but not exceeding ten gallons.
Gallons.	Feet.	Feet.
Not exceeding 1,000.	25	30
From 1,000 to 5,000.	40	50
" 5,000 to 10,000.	60	70
" 10,000 to 15,000.	90	100
" 15,000 to 20,000.	130	150
" 20,000 to 30,000.	180	200
" 30,000 and over.	200	200

16. Provided that when the quantity to be possessed does not exceed 60 gallons the provisions of conditions 8, 9 and 15 shall not apply, but the licensee shall observe the following conditions :—

(i) The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material, provided however that the doors and windows may be of wood

(ii) Where a store-house forms part of or is attached to another building and when the intervening floor or partition is of an unsubstantial or inflammable character or has openings therein the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling house or as a place where persons assemble The store house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble.

17. The store-house shall be liable to inspection by an officer authorised on this behalf.

FORM C.

(Rule 5 of Chapter III of Part II.)

License to possess dangerous petroleum in quantity not exceeding forty gallons.

No. Fee, Rs. 3

License is hereby granted to for the storage in the place prescribed below, of gallons of dangerous petroleum, subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or Authority appointed under
Rule 2 of Chapter II of Part II.

ENDORSEMENT ON FORM C.

CONDITIONS OF LICENSE.

1. If The licensing officer call upon the holder of a license, by notice in writing, to execute any repair of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of the Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which the petroleum must be contained.

3. The petroleum shall be stored in gas-tight tinned or galvanized sheet-iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well-made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight under-cap. Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch ; provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet-iron or steel, and have the following thickness of metal :—

	Not less than
(1) When the capacity does not exceed two gallons	25 B W. G.
(2) When the capacity exceeds two gallons, but does not exceed four gallons	22 B W. G.
(3) When the capacity exceeds four gallons	16 B. W. G.

4. An air-space of at least one-tenth of its capacity shall be left in each receptacle at the time of filling

5. Receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be labelled in accordance with the provisions of section 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material; provided, however, that the doors and windows may be of wood.

9. All ventilating openings in the building shall be protected by strong wire gauze.

10. No light except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

11. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

12. Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary and shall prevent any other person from doing such act.

13. The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage, and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

14. Where a store-house forms a part of or is attached to another building, and where the intervening floor or partition is of an unsubstantial or inflammable character or has openings therein, the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling or as a place where persons assemble. The store-house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble.

15. The store-house shall be liable to inspection by any officer authorised on this behalf.

FORM D.

(Rule 6 of Chapter III of Part II.)

License to possess petroleum in a major installation.

No. Fee, Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

First Assistant to the Hon'ble the Agent
to the Governor General.

(Description of the place above referred to.)

ENDORSEMENT ON FORM D.

CONDITIONS OF LICENSE.

1. Each tank shall either be separately surrounded by a wall or embankment of substantial construction, or shall be partially sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than the tank is capable of containing, and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation, and not occupied by the tank, shall be kept entirely clear and unoccupied.

2. All sheds or godowns for the storage of oil in tins, drums or casks shall be surrounded by masonry walls or embankments, or a combination of both, so constructed as to prevent the overflow of any oil that may be stored at any time within such sheds or godowns in case of its escape from the tins, drums or cases in which it is stored. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than such sheds or godowns are licensed to contain.

3. A distance of not less than one hundred feet shall be kept clear between one storage tank and another, and no tank shall be of greater height than thirty-two feet above ground level.

4. A distance of not less than one hundred and fifty feet shall be kept clear between sheds or godowns for the storage of oil otherwise than in bulk and tanks for bulk oil storage, the distance being measured between the nearest points of the perimeters of the tanks or storage buildings, as the case may be.

Proviso.—Provided that where a screen wall intervenes the distance to be kept clear shall be not less than one hundred feet.

5. A distance of not less than one hundred and fifty feet shall be kept clear between any storage tank or building and any protected work.

Proviso.—Provided that, where a screen wall intervenes, the distance to be kept clear shall be not less than one hundred feet.

6. No fire or lights except those necessary for soldering purposes shall be permitted within the installation.

FORM E.

(RULE 7 OF CHAPTER III OF PART II.)

License to possess petroleum in a minor installation.

No. Fee, Rs

License is hereby granted to for the storage, in the place described below, of gallons of petroleum, subject to the rules for the storage of petroleum, published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or Authority appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place referred to.)

ENDORSEMENT ON FORM E.

CONDITIONS OF LICENSE.

1. Every tank of which the capacity exceeds fifteen thousand gallons shall either be separately surrounded by a wall or embankment of substantial construction, or shall be sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain the total quantity of oil capable of being contained in the tank and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation and not occupied by the tanks, shall be kept entirely clear and unoccupied.

2 The distance to be kept clear between a tank and the walls or embankments which surround it shall be measuring from the ground level—

(a) for horizontal tanks, not less than one-third the height of the tank ,

(b) for perpendicular tanks, not less than one-half the height of the tank.

3. The height of walls or embankments surrounding the installation shall be not less than two feet six inches from the ground level.

4. The following distances shall be kept clear between buildings not forming part of the installation and the enclosure walls or embankments :—

Where the number of gallons stored is	Distance to be kept clear.
5,000 and under	Not less than 15 feet
Over 5,000 and up to 15,000	Ditto 20 „
Over 15,000 and up to 30,000	Ditto 30 „
Over 30,000 and up to 50,000	Ditto 40 „

Provided that these distances may be reduced by the Local Government on the recommendation of the Chief Inspector of Explosives in cases where screen walls are provided or other special precautions taken.

5. Not more than four hundred cases of oil in addition to tins and drums shall be stored at any one time in any godown or shed in which the storage of oil in tins or drums is permitted.

6. Soldering shall only be permitted in a separate room or building placed as far from the tanks as can be conveniently arranged, in which no storage or filling shall be permitted No more tins shall be allowed in the soldering room at any one time than are necessary for expeditious working.

7. No fire or lights, except those necessary in the soldering room and watchman's house, shall be permitted.

8 If the installation contains tanks of which the capacity does not exceed fifteen thousand gallons, either—

(a) each tank shall be separately enclosed in the manner prescribed in condition 1, or

(b) the entire installation shall be surrounded by a masonry wall or embankment or a combination of these forming an enclosure of dimensions sufficient to contain, and prevent the overflow of all the oil that may be stored at any one time within such walls or embankments.

FORM F.

(Rule 8 of Chapter III of Part II.)

License to possess crude petroleum in a place of storage at or near petroleum wells.

ENDORSEMENT ON FORM G.

CONDITIONS OF THE LICENSE.

1. The dangerous petroleum shall not be kept, used or transported except in gas-tight tinned or galvanized sheet-iron, steel or lead plate drums or receptacles containing each not more than 4 gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight under cap. Such drums or receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch. Provided that wood cases shall not be necessary when the drums or receptacles are made of tinned or galvanized sheet-iron, or steel, and have the following thickness of metal:—

	Not less than
1. When the capacity does not exceed 2 gallons	25 B. W. G.
2. When the capacity exceeds 2 gallons	22 B W. G.

2. The drums or receptacles shall be so substantially constructed and secured as not to be liable except under circumstances of gross negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

3. Every such vessel, not forming part of a motor vehicle, when used for transporting or keeping dangerous petroleum, shall bear the words "Dangerous Petroleum Highly Inflammable" legibly and indelibly stamped or marked thereon, or on a metallic or enamelled label attached thereto.

4. An air-space of at least one-tenth of its capacity shall be left in each drum or receptacle at the time of filling to allow for expansion of the dangerous petroleum.

5. Before repairs are done to any such vessel, that vessel shall, as far as practicable, be cleaned by the removal of all dangerous petroleum and of all dangerous vapours derived from the same.

6. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable materials, provided, however, that the doors and windows may be of wood.

7. Where a store-house forms part of, or is attached to another building, and when the intervening floor or partition is of an unsubstantial or inflammable character, or has an opening therein, the whole of such building shall be deemed to be the store-house, and no portion of such store-house shall be used as a dwelling or as a place where persons assemble. A store-house shall have a separate entrance from the open air distinct from that of any dwelling or building in which persons assemble.

8. The amount of dangerous petroleum to be kept in any one store-house, whether or not upon motor-vehicles, shall not exceed sixty gallons at any one time.

9. The filling or replenishing of any vessel with dangerous petroleum shall not be carried on, nor shall the contents of any such vessel be exposed, in the presence of fire or artificial light, except a light of such construction, position and character as not to be liable to ignite any inflammable vapour, and no artificial light shall be brought within dangerous proximity of the place where any vessel containing dangerous petroleum is being kept.

10. In the case of all dangerous petroleum kept or transported for the purpose of, or in connection with any motor-vehicle, (*a*) all due precautions shall be taken for the prevention of accidents by fire or explosion and for the prevention of unauthorised persons having access to any dangerous petroleum kept or transported and to the vessels containing, or having actually contained, the same, and (*b*) every person managing or employed on or in connection with any motor-vehicle shall abstain from every act whatever which tends to cause fire or explosion, and which is not reasonably necessary, and shall prevent any other person from committing such act.

11. The store-house shall be liable to inspection by an officer authorised in this behalf.

FORM H.

(Rule 1 of Chapter IV of Part II.)

General license to transport petroleum other than dangerous petroleum.

CHAPTER V.—FEES.

DRAFT RULES UNDER SECTION 9 OF THE INDIAN PETROLEUM ACT, 1899, FOR THE IMPORTATION, POSSESSION AND TRANSPORT OF PETROLEUM IN THE TERRITORIES ADMINISTERED BY THE AGENT TO THE GOVERNOR-GENERAL IN BALUCHISTAN.

PART I.

PRELIMINARY.

Definition.

In these rules, —

(*a*) "Part" means a part of these rules;

(*b*) "petroleum in bulk" means petroleum in quantities exceeding five hundred gallons, contained in any one receptacle;

(*c*) "installation" means a place specially prepared for the storage of petroleum;

(*d*) "major installation" means an installation —

(*1*) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, exceeding fifty thousand gallons, or

(2) in which tin-making operations are carried on;

(*e*) "minor installation" means an installation—

(*1*) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, not exceeding fifty thousand gallons, and

(2) in which no tin-making operations are carried on;

(*f*) "protected works" includes buildings in which persons dwell or assemble, timber yards, other petroleum stores and any other place which the Local Government may declare as such by Notification;

(*g*) "motor-vehicles" includes a motor bicycle, and a motor tricycle; and

(*h*) "owner" as applied to a motor vehicle, includes a person who hires, or is otherwise entitled for the time being to use or work a motor-vehicle.

PART II.

POSSESSION AND TRANSPORT OF PETROLEUM.

CHAPTER I.—POSSESSION OF PETROLEUM.

Smoking prohibited.

1. No smoking shall be permitted inside any installation.

Supervision of operations within installation. Supervisor.

2. All operations within any installation shall be conducted under the supervision of a responsible Agent or Supervisor.

Cleanliness of installation. vegetation and rubbish.

3. The ground in the interior of an installation shall be kept clean and free from goods of a combustible nature, vegetation and rubbish.

Supply of sand in installation.

4. A sufficient supply of sand shall always be kept in an installation for the purpose of extinguishing fire.

5. All enclosure walls and embankments required to be constructed by or under these rules shall be certified as being sufficient to ensure safety by a Railway Engineer in the case of installations constructed on Railway premises, and in the case of other installations by an Engineer accepted as qualified for this purpose by the Local Government.

Enclosure walls and embankments.

6. The capacity in gallons of every tank and storage shed or godowns in an installation shall be conspicuously marked on it, and shall be calculated as follows:—

Marking of capacity of tank.

for tanks, at the rate of 6·25 gallons per cubic foot;
for sheds and godowns, at the rate of 10 gallons per 3 cubic feet.

7. Every tank or other receptacle for the storage of petroleum in bulk, except a tank or receptacle which is not of sufficient capacity to contain ten thousand gallons of petroleum and which is so situated as not to be liable to cause danger in the event of the petroleum being ignited, shall be protected by an efficient lightning-conductor.

Protection from lightning.

Explanation.—A tank or receptacle shall be deemed to be so situated as not to be liable to cause danger in the event of the petroleum being ignited, if it is not in close proximity to any other tank or receptacle, or to any building and if it is surrounded by a wall, or moat, or combination of both, sufficient to prevent the flow of petroleum beyond certain circumscribed limits in the event of the escape of the whole contents of the tank when full.

8. Not less than once in every year the licensee of an installation shall test or cause to be tested the efficiency of the conductor in such manner as the authority granting the license may, by general or special order, declare to be sufficient, and a certificate showing the date of the last test shall be posted in a conspicuous place within the installation.

Testing of lightning-conductor by licensee.

9. Any officer appointed by a Local Government in this behalf may enter any installation for the purpose of testing the efficiency of the conductor, at any time after sunrise and before sunset.

Official testing of lightning-conductor.

10. No installation shall be open, and no work in any installation shall be permitted, between sunset and sunrise: provided that in cases where electric lighting is exclusively used, night working may be permitted by the Local Government on the recommendation of the Chief Inspector of Explosives.

Time for work in installations.

11. Where there are any pipes or openings for draining out water in any enclosure wall, arrangements shall be made whereby they can be closed, and they shall only be kept open when actually necessary for drainage purposes. The nature of such arrangements shall be shown in the specifications submitted with the application for a license.

Closure of pipes and openings.

12. All sheds or godowns in an installation for the storage of oil in tins, drums or cases shall be built of uninflammable material.

Materials for sheds and godowns.

13. There shall be hung up in a conspicuous place in every installation for which a license has been granted, copies, in English and the Vernacular, of the rules contained in this Part, and of the conditions endorsed on the license.

Posting up of rules and conditions.

CHAPTER II.—GENERAL PROVISIONS RELATING TO LICENSES.

1. All applications for licenses for the possession or transport of petroleum shall be made to the District Magistrate.

Applications for Licenses.

2. Licenses (*a*) for the possession or transport of dangerous petroleum in quantities not exceeding forty gallons, (*b*) for the possession or transport of petroleum, not being dangerous or crude petroleum nor petroleum in bulk, and (*c*) for the possession of petroleum, in bulk or otherwise, in a minor installation, may be granted by a District Magistrate or by such other authority as the Local Government may, from time to time by order in writing, appoint in this behalf. In all other cases the licensing authority shall be the Local Government.

Licensing authority.

3. The licensing authority may, for reasons to be communicated to the applicant, refuse a license in any case: provided that when a license is refused by any authority other than the Local Government, such refusal shall be reported to the Local Government.

Refusal of license.

4. Every license granted under these rules shall be liable to be forfeited for any contravention of the Act, or of any rule thereunder, or of any condition contained in such license, or for any other reason deemed by the licensing authority to be good and sufficient, and recorded by him in writing.

Forfeiture of license.

5. Every license and pass granted under these rules shall be held subject to the conditions endorsed on it, and shall contain all the particulars required to be entered on it by the form prescribed for it under these rules.

Particulars of license.

6. (1) Every application for the renewal of a license shall be made in the same manner as an application for an original license.

Renewal of licenses.

(2) Every such application shall be made at a date not less than fifteen days before the date on which the original license expires.

(3) The same fee shall be charged for the renewal of a license as for a new license.

7. When any license is granted for the possession or transport of petroleum a copy of the rules contained in Chapter I of this Part in the case of a license for possession, and rule 10 of Chapter IV of this Part in the case of a license for transport, printed in English and the vernacular, shall be given, together with the license, to the licensee.

Supply of rules to licensee.

CHAPTER III.—LICENSES FOR THE POSSESSION OF PETROLEUM.

1. Save as provided in rule 10 of this Chapter, every license for the possession of petroleum shall remain in force until the 31st of December next following the date of issue of the license.

Continuance of license.

2. Licenses for the possession of petroleum, not being dangerous petroleum, otherwise than in bulk, may be granted in Form A.

Petroleum not in bulk, other than dangerous petroleum.

3. (1) The holder of a license in Form A may, at any time before the expiry of the license, apply for permission to transfer his license to another person.

Transfer of certain licenses.

(2) Such application shall be made to the District Magistrate, who shall, if he approves of the transfer, enter upon the license, under his signature, an endorsement to the effect that the license has been transferred to the person named.

(3) A fee of Rs. 5 shall be charged on each such application.

(4) The person to whom the license is so transferred shall enjoy the same powers and be subject to the same obligations under the license as the original holder.

4 Licenses for the possession of dangerous petroleum not in bulk in quantity exceeding forty gallons may be granted in Form B.

Dangerous petroleum not in bulk.

5. Licenses for the possession of dangerous petroleum in quantity not exceeding forty gallons may be granted in Form C.

Dangerous petroleum not exceeding forty gallons

6. Licenses for the possession of any stated quantity of petroleum in major installations in accordance with such specifications and plans as may be approved by the Local Government, on the recommendation of the Chief Inspector of Explosives, may be granted in Form D.

Storage in major installations.

7. Licenses for the possession of any stated quantity of petroleum in minor installations in accordance with such specifications and plans as may be approved by the Local Government, on the recommendation of the Chief Inspector of Explosives, may be granted in Form E.

Storage in minor installations

8. Subject to such conditions as may be prescribed by the Local Government in each case, licenses in Form F may be granted to any person engaged in the extraction of petroleum from wells for the possession of any quantity of crude petroleum in any place of storage at or near such wells.

Storage of crude petroleum in bulk.

9. (1) Licenses in Form G may be granted free of charge for the possession of dangerous petroleum for use on motor-vehicles and for its transport thereon, for the purpose of use therein.

Dangerous petroleum for use on motor-vehicles.

(2) Save in the cases provided for by the conditions of the license, the provisions of the ordinary rules relating to the possession of dangerous petroleum shall regulate the possession of dangerous petroleum for use on motor-vehicles.

10. Licenses for the possession of petroleum in an installation may be granted free of charge to any local authority, subject to such conditions and for such period, as the Local Government may direct.

Storage by local authority.

CHAPTER IV.—LICENSES FOR THE TRANSPORT OF PETROLEUM.

General licenses for the transport of non-dangerous petroleum.

1. General licenses for the transport of petroleum, other than dangerous petroleum, may be granted for a period of twelve months in Form H.

General licenses for the transport of dangerous petroleum.

2. General licenses for the transport of dangerous petroleum otherwise than in bulk may be granted for a period of twelve months in Form I.

Effect of general license.

3. Licenses granted under rules 1 and 2 of this Chapter may authorise the holder to transport petroleum without restriction as to destination or total quantity.

Pass for transport of petroleum.

4. The holder of a general license granted under rules 1 or 2 of this Chapter shall, with each consignment of petroleum conveyed under cover of his license, issue to the person who takes charge of the petroleum for the purpose of transporting it a numbered pass in Form J.

Special licenses for the transport of petroleum other than dangerous petroleum.

5. Special licenses may be granted for the transport of petroleum, other than dangerous petroleum, in quantities exceeding five hundred gallons in Form K

Special licenses for the transport of dangerous petroleum.

6. Special licenses may be granted for the transport of dangerous petroleum other than in bulk in Form L.

Effect of special license.

7. A special license granted under rules 5 and 6 shall only cover the transport of the particular consignment entered in the license.

Particulars to be given in applications for special licenses.

8. Applications for special licenses for the transport of petroleum by rail, or by road or by both, shall specify the description and quantity of petroleum to be transported, and the places from and to which, respectively, the petroleum is to be conveyed, and shall describe the receptacles in which it is to be contained.

Transport of dangerous petroleum by motorists otherwise than on a motor-vehicle.

9. Licenses in Form M to transport dangerous petroleum, otherwise than on a motor-vehicle, may be granted to owners of motor-vehicles holding licenses under rule 9, sub-rule (1), of Chapter III of this Part, to possess petroleum and use or transport it on a motor-vehicle.

Validity of license granted in another Province.

10. Petroleum may be transported within British Baluchistan under cover of a license granted by the prescribed authority in any other province, provided that the conditions of such license are observed throughout the period during which the petroleum is in transit

---

CHAPTER V.—FEES.

Method of levying fees.

1. (1) Where the proceeds of fees leviable for licenses under these rules have been assigned by the Local Government to any local authority, the fees shall be levied in such manner as the local authority may from time to time direct.

(2) In all other cases the fees shall be levied by means of impressed stamps.

(3) An application for the grant or the renewal of a license shall bear the proper stamp, and, if it be refused, the value of the separate stamp (if any) which may have been already provided by the applicant for the desired license or renewed license, *minus* the deductions prescribed by section 54 of the Indian Stamp Act, 1899 (II of 1899), may be refunded to the applicant. An application should not be made on the stamped paper intended for the license or renewed license, but, where this has been wrongly done, the value of the stamp may be refunded *minus*—

(*i*) the value of the stamp which should have been affixed to the application, and

(*ii*) the deductions prescribed as aforesaid.

Fees for licenses for possession of petroleum.

2. The following fees shall be charged for licenses for the possession of petroleum namely :—

Non-dangerous Petroleum

	R	
(*a*) When the quantity to be stored exceeds five hundred, but does not exceed one thousand gallons.	12	
(*b*) When the quantity to be stored exceeds one thousand, but does not exceed five thousand gallons.	12	for the first one thousand gallons *plus* R2 for every additional one thousand gallons or part thereof.

	R	
(c) When the quantity to be stored exceeds five thousand gallons, but does not exceed fifty thousand gallons.	20	for the first five thousand gallons *plus* R4 for every additional one thousand gallons or part thereof.
(d) When the quantity to be stored exceeds fifty thousand gallons.	250	

Dangerous Petroleum.

	R	
(e) When the quantity to be stored does not exceed forty gallons.	3	
(f) When the quantity to be stored exceeds forty gallons, but does not exceed five hundred gallons	8	
(g) When the quantity to be stored exceeds five hundred gallons		The same fees as those laid down for non-dangerous petroleum.

Fees for licenses for transport of petroleum.

3 The following fees shall be charged for licenses for the transport of petroleum.

Non-dangerous Petroleum.

Special license—

	R
(a) When the quantity to be transported exceeds five hundred, but does not exceed five thousand gallons	1
(b) For every additional five thousand gallons or part of five thousand gallons	1
General license for the transport of non-dangerous petroleum by rail or by road, for twelve months	100

Dangerous Petroleum.

Special license—

	R	
(i) When the quantity to be transported does not exceed forty gallons.	2	
(ii) When the quantity to be transported exceeds forty gallons but does not exceed four hundred and eighty gallons.	2	for the first forty gallons *plus* 8 annas for every additional forty gallons or part thereof.
(iii) When the quantity to be transported exceeds four hundred and eighty gallons.	8	for the first four hundred and eighty gallons *plus* R2 for every additional four hundred and eighty gallons or part thereof.
General license for the transport of dangerous petroleum by the owner of a motor-vehicle by road or rail up to a maximum of sixty gallons.	5	
General license for the transport of dangerous petroleum by dealers by rail or road.	100	

FORM A

(Rule 2 of Chapter III of Part II.)

License to possess petroleum (other than dangerous petroleum) otherwise than in bulk.

No. Fee , Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. dated , and to the further conditions on the back of this license.

District Magistrate or Authority
appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM A.

CONDITIONS OF THE LICENSE.

If the licensing officer call on the holder of a license, by a notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors.

3. Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building.

A combination of these methods is permissible.

4. The following distances shall be kept clear round the building :—

Distances to be kept clear round buildings or enclosure walls.	Number of gallons to be stored.
Not less than 15 feet	5,000 and under.
" 20 "	Over 5,000 and up to 15,000
" 30 "	" 15,000 " 30,000
" 40 "	" 30,000 " 50,000
" 60 "	" 50,000 " 75,000
" 80 "	" 75,000 " 100,000
" 100 "	100,000 " 150,000
" 150 "	Unlimited.

5. No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted within the installation.

FORM B.

(Rule 4 of Chapter III of Part II.)

License to possess dangerous petroleum, otherwise than in bulk, in quantity exceeding forty gallons.

No. Fee, Rs.

License is hereby granted to for the storage, in the place described below, of gallons of dangerous petroleum subject to the rules for the storage of petroleum, published in Notification No. , dated and to the further conditions on the back of this license.

Secretary to the Hon'ble the Chief Commissioner.

The 190 .

(Description of the place above referred to).

ENDORSEMENT ON FORM B.

CONDITIONS OF LICENSE.

1. If the licensing officer call upon the holder of a license, by notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which petroleum must be contained.

The petroleum shall be stored in gas-tight tinned or galvanized sheet iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air tight under-cap. Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch : provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet iron or steel, and have the following thickness of metal :—

	Not less than
(1) When the capacity does not exceed two gallons	25 B. W. G.
(2) When the capacity exceeds two gallons but does not exceed four gallons	22 B. W. G.
(3) When the capacity exceeds 4 gallons	16 B. W. G.

4. An air space of at least one-tenth, of its capacity shall be left in each receptacle at the time of filling.

5. The receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be labelled in accordance with the provisions of sections 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors.

9. Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building.

A combination of these methods is permissible.

10. All ventilating openings in the building shall be protected by strong wire gauze.

11. No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

12. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

13 Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary, and shall prevent any other person from doing such act.

14 The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage, and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

15. The following distances shall be kept clear from protected works round the place of storage:—

Quantity to be stored.	Distances to be kept clear when dangerous petroleum is stored in drums of not greater capacity than four gallons.	Distances to be kept clear when dangerous petroleum is stored in drums of capacity exceeding four gallons but not exceeding ten gallons.
Not exceeding 1,000 gallons	25 Feet.	30 Feet.
From 1,000 to 5,000 „	40 „	50 „
„ 5,000 to 10,000 „	60 „	70 „
„ 10,000 to 15,000 „	90 „	100 „
„ 15,000 to 20,000 „	130 „	150 „
„ 20,000 to 30,000 „	180 „	200 „
„ 30,000 and over „	200 „	200 „

16. Provided that when the quantity to be possessed does not exceed 60 gallons the provisions of conditions 8, 9 and 15 shall not apply, but the licensee shall observe the following conditions:—

(i) The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material; provided, however, that the doors and windows may be of wood.

(ii) Where a store-house forms part of or is attached to another building and when the intervening floor or partition is of an unsubstantial or inflammable character or has opening therein, the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling house or as a place where persons assemble. The store-house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble

17. The store-house shall be liable to inspection by an officer authorised on this behalf.

FORM C.

(Rule 5 of Chapter III of Part II.)

License to possess dangerous petroleum in quantity not exceeding forty gallons.

No. Fee, Rs. 3.

License is hereby granted to for the storage, in the place prescribed below, of gallons of dangerous petroleum, subject to the rules for the storage of petroleum published in Notification No , dated and to the further conditions on the back of this license.

District Magistrate or Authority
appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM C.

CONDITIONS OF LICENSE.

1. If the licensing officer call upon the holder of a license, by notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the

holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of the Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which the petroleum must be contained.

3. The petroleum shall be stored in gas-tight tinned or galvanized sheet-iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight undercap. Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch, provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet-iron or steel, and have the following thickness of metal :—

(1) When the capacity does not exceed two gallons	Not less than 28 B. W. G.
(2) When the capacity exceeds two gallons but does not exceed four gallons	" 22 B. W. G.
(3) When the capacity exceeds four gallons	" 16 B. W. G.

4. An air space of at least one-tenth of its capacity shall be left in each receptacle at the time of filling.

5. Receptacles shall be so substantially constructed and secured as not to be liable except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be labelled in accordance with the provisions of section 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material, provided, however, that the doors and windows may be of wood.

9. All ventilating openings in the building shall be protected by strong wire gauze.

10. No light except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

11. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

12. Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary and shall prevent any other person from doing such act.

13. The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage, and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

14. Where a store-house forms a part of or is attached to another building, and where the intervening floor or partition is of an unsubstantial or inflammable character or has openings therein the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling house or as a place where persons assemble. The store-house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble.

15. The store-house shall be liable to inspection by any officer authorised on this behalf.

FORM D.

(Rule 6 of Chapter III of Part II.)

License to possess petroleum in a major installation.

No. Fee, Rs

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

Secretary to the Hon'ble the Chief Commissioner.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM D

CONDITIONS OF LICENSE.

1. Each tank shall either be separately surrounded by a wall or embankment of substantial construction or shall be partially sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than the tank is capable of containing, and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation, and not occupied by the tank, shall be kept entirely clear and unoccupied.

2. All sheds or godowns for the storage of oil in tins, drums or cases shall be surrounded by masonry walls or embankments, or a combination of both, so constructed as to prevent the overflow of any oil that may be stored at any time within such sheds or godowns in case of its escape from the tins, drums or cases in which it is stored. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than such sheds or godowns are licensed to contain.

3. A distance of not less than one hundred feet shall be kept clear between one storage tank and another, and no tank shall be of greater height than thirty-two feet above ground level.

4. A distance of not less than one hundred and fifty feet shall be kept clear between sheds or godowns for the storage of oil otherwise than in bulk and tanks for bulk oil storage, the distance being measured between the nearest points of the perimeters of the tanks or storage buildings, as the case may be.

Proviso.—Provided that where a screen wall intervenes, the distance to be kept clear shall be not less than one hundred feet.

5. A distance of not less than one hundred and fifty feet shall be kept clear between any storage tank or building and any protected work.

Proviso.—Provided that where a screen wall intervenes, the distance to be kept clear shall be not less than one hundred feet.

6. No fire or lights, except those necessary for soldering purposes, shall be permitted within the installation.

FORM E.

(Rule 7 of Chapter III of Part II.)

License to possess petroleum in a minor installation.

No. Fee, Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum, subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or Authority appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place referred to.)

ENDORSEMENT ON FORM E.

CONDITIONS OF LICENSE.

1. Every tank of which the capacity exceeds fifteen thousand gallons shall either be separately surrounded by a wall or embankment of substantial construction, or shall be sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain the total quantity of oil capable of being contained in the tank and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation, and not occupied by the tanks, shall be kept entirely clear and unoccupied.

2. The distance to be kept clear between a tank and the walls or embankments which surround it shall be, measuring from the ground level,—

(*a*) for horizontal tanks, not less than one-third the height of the tank;

(*b*) for perpendicular tanks, not less than one-half the height of the tank.

3. The height of walls or embankments surrounding the installation shall be not less than two feet six inches from the ground level.

4. The following distances shall be kept clear between buildings not forming part of the installation and the enclosure walls or embankments :—

Where the number of gallons stored is	Distance to be kept clear.
5,000 and under	Not less than 15 feet.
Over 5,000 and up to 15,000	Ditto 20 "
Over 15,000 and up to 30,000	Ditto 30 "
Over 30,000 and up to 50,000	Ditto 40 "

Provided that these distances may be reduced by the Local Government on the recommendation of the Chief Inspector of Explosives in cases where screen walls are provided or other special precautions taken

5. Not more than four hundred cases of oil in addition to tins and drums shall be stored at any one time in any godown or shed in which the storage of oil in tins or drums is permitted.

6. Soldering shall only be permitted in a separate room or building placed as far from the tanks as can be conveniently arranged, in which no storage or filling shall be permitted. No more tins shall be allowed in the soldering room at any one time than are necessary for expeditious working.

7. No fire or lights, except those necessary in the soldering room and watchman's house, shall be permitted.

8. If the installation contains tanks of which the capacity does not exceed fifteen thousand gallons either—

(*a*) each tank shall be separately enclosed in the manner prescribed in condition 1, or

(*b*) the entire installation shall be surrounded by a masonry wall or embankment or a combination of these forming an enclosure of dimensions sufficient to contain, and prevent the overflow of, all the oil that may be stored at any one time within such walls or embankments.

FORM F.

(Rule 8 of Chapter III of Part II.)

License to possess crude petroleum in a place of storage at or near petroleum wells.

FORM G.

(Rule 9 of Chapter III of Part II.)

Special license to possess and transport dangerous petroleum for owners of motor-vehicles.

No.

License is hereby granted to owner (or hirer) of a motor-vehicle (or vehicles) for the possession of gallons of dangerous petroleum for use therein at and for its transport on the said motor-vehicle (or vehicles) for the purpose of use therein, subject to the rules for the possession and transport of dangerous petroleum published in Notification No. , dated , and to the conditions at the back of this license.

Situation and description of store-house above referred to.

When the quantity exceeds 40 gallons . . . . Secretary to the Hon'ble the Chief Commissioner.

When the quantity does not exceed 40 gallons . . District Magistrate or authority appointed under rule 2 of Chapter II of Part II.

The 190 .

ENDORSEMENT ON FORM G.

CONDITIONS OF THE LICENSE.

1. The dangerous petroleum shall not be kept, used or transported except in gas-tight tinned or galvanized sheet iron, steel or lead plate drums or receptacles containing each not more than 4 gallons and fitted with well-made filling holes and well-fitting screw plugs or fitted with screw cap with metal air-tight under-cap. Such drums or receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch. Provided that wood cases shall not be necessary when the drums or receptacles are made of tinned or galvanized sheet iron, or steel, and have the following thickness of metal —

	Not less than
(1) When the capacity does not exceed 2 gallons	25 B. W. G.
(2) When the capacity exceeds 2 gallons	22 B. W. G.

2. The drums or receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of gross negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

3. Every such vessel, not forming part of a motor-vehicle when used for transporting or keeping dangerous petroleum, shall bear the words "Dangerous Petroleum, Highly Inflammable" legibly and indelibly stamped or marked thereon, or on a metallic or enamelled label attached thereto.

4. An air-space of at least one-tenth of its capacity shall be left in each drum or receptacle at the time of filling to allow for expansion of the dangerous petroleum.

5. Before repairs are done to any such vessel that vessel shall, as far as practicable, be cleaned by the removal of all dangerous petroleum and of all dangerous vapours derived from the same.

6. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable materials, provided, however, that the doors and windows may be of wood.

7. Where a store-house forms part of, or is attached to another building and when the intervening, floor or partition is of an unsubstantial or inflammable character, or has an opening therein, the whole of such building shall be deemed to be the store-house, and no portion of such store-house shall be used as a dwelling or as a place where persons assemble. A store-house shall have a separate entrance from the open air distinct from that of any dwelling or building in which persons assemble.

8 The amount of dangerous petroleum to be kept in any one store-house, whether or not upon motor-vehicles, shall not exceed sixty gallons at any one time.

9 The filling or replenishing of any vessel with dangerous petroleum shall not be carried on, nor shall the contents of any such vessel be exposed, in the presence of fire or artificial light, except a light of such construction, position and character as not to be liable to ignite any inflammable vapour, and no artificial light shall be brought within dangerous proximity of the place where any vessel containing dangerous petroleum is being kept

10 In the case of all dangerous petroleum kept or transported for the purpose of, or in connection with any motor-vehicle, (a) all due precautions shall be taken for the prevention of accidents by fire or explosion and for the prevention of unauthorised persons having access to any dangerous petroleum kept or transported and to the vessels containing, or having actually contained, the same, and (b) every person managing or employed on or in connection with any motor-vehicle shall abstain from every act whatever which tends to cause fire or explosion, and which is not reasonably necessary, and shall prevent any other person from committing such act.

11. The store-house shall be liable to inspection by an officer authorised in this behalf.

PROMISSORY NOTE.

Stolen.

The Government Promissory Notes as detailed below, for R40,000, originally standing in my name (with the exception of Note No 123070 of 1865, for R500, which was originally issued in the name of Mr H. E. Teixeira, by whom it was endorsed to me) and never endorsed to any other person, having been stolen, notice is hereby given that payment of the undermentioned Notes and the interest thereon have been stopped at the Public Debt Office, Bank of Bengal, Calcutta, and that application is about to be made for issue of duplicates in my favour. The public are cautioned against purchasing or otherwise dealing with the undermentioned securities:—

3½% loan of 1865, Nos M 016442 and 43 and 121533 for R1,000 each, M 014555, 123070, M012343, M013638 and 39, M008240 to 42, M015898 for R500 each, 3½% loan of 1854-55, Nos 091990 for R3,000, M008333, M011196 to 99 for R500 each; M011300 to 302 for R1,000 each; 056020, 079041 for R2,500 each; M008334 for R1,000; 3½% loan of 1879, Nos M003823 for R1,000 and 016992 for R4,200, 3½% loan of 1842-43, Nos 099710 for R2,600; M006138 for R200, M004030, M005580 to 83 for R500 each; M003357 for R1,000, M004551 for R5,000, and 065573 for R1,500.

Estate J. H. Temple, deceased.

PURSUANT TO SECTION 42, ACT 28 OF 1866.

Notice is hereby given that all persons having claims against the late James Herbert Temple, of the Indian Civil Service, who died at Darjeeling on 23rd May 1906, Letters of Administration to whose Estate have been granted to James Edmund Vallance, Esq., Accountant of Messrs. Grindlay & Co, Calcutta, are required to send in the same on or before 21st January next to the said Messrs. Grindlay & Co., Calcutta, after which date the said Administrator will proceed to administer the assets having regard only to the

claims of which he shall then have received notice, and no claims sent in subsequently will be recognised, and all persons indebted to or holding any securities or property belonging to the said Estate are also hereby requested to pay without delay the amount owing by them, or deliver the said securities or property to the said Administrator whose receipt alone is valid for the same.

J. E. VALLANCE,
Administrator to Estate
J. H. Temple, deceased.

CALCUTTA:
14th December 1906

NOTICE

Notice of Application under the Indian Electricity Act, 1903, for a license for the supply of energy for electric traction and to the public for the purpose of general supply within the Cantonment of Jubbulpore.

NOTICE is hereby given that an application has been made by Henry Francis Brown, Alfred Simson, William Henry Cheetham, Charles Conning Kilburn and Ralph Percy Ashton, all carrying on business at No. 4, Fairlie Place, Calcutta, in partnership under the style or firm of Kilburn & Co., for a license under section 4 of the Indian Electricity Act (III of 1903) to supply electrical energy for Electric Traction and to the public for the purposes of general supply within the area of supply hereinafter mentioned.

Area of supply.—The area of supply shall be the whole area included in the Cantonment of Jubbulpore in the Central Provinces, which area is particularly delineated in the map forwarded by the applicants with their application for the license in pursuance of the rules made under the said Act and is thereon coloured yellow.

Statement of purposes for which energy is to be given.—To supply energy for Electric Traction within the aforesaid area and also to supply energy to the public for the purposes of general supply within the aforesaid area.

General Description of proposed Works and System of Supply.—The supply to be on the continuous or alternate current system for all purposes.

The system of distribution may be on the 2-wire, 3-wire, or 4-wire system for all purposes.

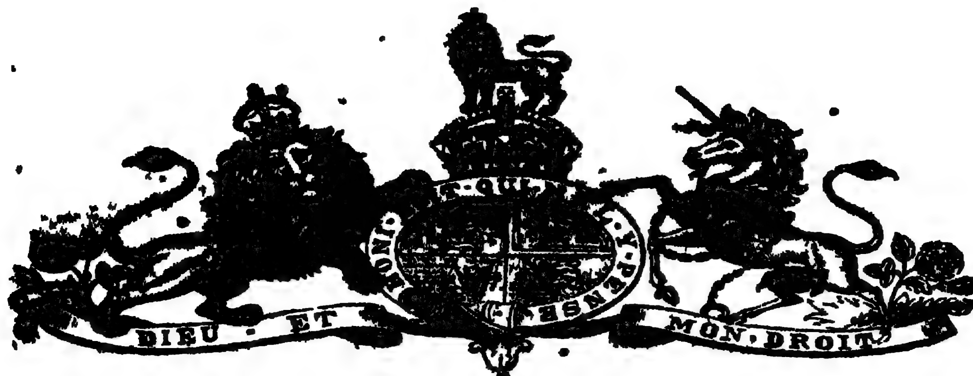
For the continuous systems the pressure of generation shall be within the limits of low pressure, for the polyphase or single phase systems it shall be within the limits of high pressure, and the pressure on the distribution for both systems shall not exceed the limits of low pressure.

The frequency of any polyphase system shall not be less than 25 or more than 60 complete periods per second.

The negative conductor of the 2-wire electric traction system and the neutral conductor of the multiwire system for the supply of energy to the public for any purpose may be connected to earth.

The whole of the distributing mains may be aerial, except in places where it may be found that circumstances will not permit of conductors being erected, in which cases they may be underground.

All mains shall be erected or laid in accordance with the rules under the Act.



Names of Streets along which it is proposed to place electric supply lines or other works for the purposes of general supply.—

Theatre Road, Nerbudda Road, Club Road, Mall Road, Range Road and such other roads as may be deemed necessary for the maintenance of an efficient supply.

Copies of the map forwarded by the applicants with their application as aforesaid can be inspected at the office of the Secretary to the Cantonment Committee, Jubbulpore, and at the office of abovenamed applicants, No. 4, Fairlie Place, Calcutta.

Copies of the draft license can also be obtained at the abovementioned offices on payment of one rupee per copy.

Copies of the license if and when granted will be obtainable at the said offices on payment of one rupee per copy. Every local Authority, Company, or person desirous of making any representation to the Government of India or of laying before it any objection respecting the application may do so by letter addressed to the Secretary to the Government of India, Public Works Department, within three months of the date of issue of the newspaper containing the first advertisement of this notice.

PART VI.

Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS, UNDER THE PROVISIONS OF THE INDIAN COUNCILS ACTS, 1861 AND 1892 (24 & 25 VICT., CAP. 67, AND 55 & 56 VICT., CAP. 14).

The Council met at Government House, Calcutta, on Friday, the 14th December, 1906.

PRESENT:

His Excellency the Earl of Minto, P.C., G.C.M.G., G.M.S.I., G.M.I.E., Viceroy and Governor General of India, *presiding*.
His Honour Sir A. H. L. Fraser, K.C.S.I., Lieutenant-Governor of Bengal.
His Excellency General Viscount Kitchener of Khartoum, G.C.B., O.M., G.C.M.G., Commander-in-Chief in India.
The Hon'ble Sir Denzil Ibbetson, K.C.S.I.
The Hon'ble Mr. H. Erle Richards, K.C.
The Hon'ble Mr. J. P. Hewett, C.S.I., C.I.E.
The Hon'ble Mr. E. N. Baker, C.S.I.
The Hon'ble Major-General C. H. Scott, C.B., R.A.
The Hon'ble Sir Harvey Adamson, KT., C.S.I.
The Hon'ble Mr. Gopal Krishna Gokhale, C.I.E.
The Hon'ble Mr. A. A. Apcar, C.S.I.
The Hon'ble Mr. S. Ismay, C.S.I.
The Hon'ble Mr. W. T. Hall, C.S.I.
The Hon'ble Nawab Saiyid Muhammad Sahib Bahadur
The Hon'ble Sir Rameshwara Singh, K.C.I.E., Maharaja Bahadur of Darbhanga
The Hon'ble Munshi Madho Lal.

The Hon'ble Mr. Gangadhar Rao Madhav Chitnavis, C.I.E.
The Hon'ble Sir S. W. Edgerley, K.C.V.O., C.I.E.
The Hon'ble Mr F. A. Slacke.
The Hon'ble Mr. H. A. Sim, C.I.E.
The Hon'ble Tikka Sahib Ripudaman Singh of Nabha.

NEW MEMBERS.

The Hon'ble MAHARAJA SIR RAMESHWARA SINGH BAHADUR of DARBHANGA, the Hon'ble MUNSHI MADHO LAL, the Hon'ble MR. GANGADHAR RAO MADHAV CHITNAVIS, the Hon'ble SIR S. W. EDGERLEY, the Hon'ble MR. SLACKE, the Hon'ble MR. SIM, and the Hon'ble TIKKA SAHIB RIPUDAMAN SINGH OF NABHA took their seats as Additional Members of Council.

QUESTION AND ANSWER.

The Hon'ble MR. APCAR asked :—

"In view of the urgent representations which have been made to Government by the mercantile community in favour of the selection of Sara as the site for the proposed railway bridge over the Lower Ganges and in view also of the fact that the need for the speedy construction of the bridge at Sara has been greatly accentuated during the last few weeks by the serious block of traffic which has occurred at the Sara-Damukdia crossing, will the Government be pleased to give such information as may be available in regard to the present position of the project ?"

The Hon'ble MR. HEWETT replied :—

"In 1903 and again in 1904 the Government of India strongly recommended to the Secretary of State the construction at an early date of a bridge over the Ganges at Sara. The Secretary of State postponed consideration of the project until information could be made available of the effect on the traffic of the new railway from Katihar to Ranaghat which has not yet been opened throughout its entire length. The Secretary of State has now asked the Government of India for their opinion on the proposal of the Bengal and North-Western Railway to construct a bridge at Godagiri, and also for their general views on the question of bridging the Ganges. The matter has been under the consideration of the Railway Board, who have recommended that there should be one bridge at Rampur Boalia to be constructed from State funds; that the Bengal and North-Western and Eastern Bengal Railways should be connected by short metre gauge extensions with this bridge; and that the metre gauge should be given access to Calcutta by means of a new line also to be constructed by the State. The Government of India have decided to appoint a small Committee to investigate the whole question of the site at which the Ganges should be bridged. It will be presided over by the Director of Railway Construction, and the Government of Bengal, the Port Commissioners of Calcutta, the Bengal Chamber of Commerce, and the Bengal National Chamber of Commerce will each have a representative on it."

INSOLVENCY (PROVINCIAL) BILL.

The Hon'ble MR. RICHARDS moved that the Bill to consolidate and amend the law relating to Insolvency in British India, as administered by Courts having jurisdiction outside the Presidency-towns and the town of Rangoon be referred to a Select Committee consisting of the Hon'ble Sir Harvey Adamson, the Hon'ble Mr. Apcar, the Hon'ble Mr. Ismay, the Hon'ble Munshi Madho Lal, the Hon'ble Dr. Rashbehari Ghose and the mover. He said that the name of the Hon'ble Dr. Rashbehari Ghose was not on the Notice Paper, but that it had been added with the consent of His Excellency.

The motion was put and agreed to.

PRESIDENCY BANKS (AMENDMENT) BILL.

The Hon'ble MR. BAKER moved that the Bill further to amend the Presidency Banks Act, 1876, be referred to a Select Committee consisting of the Hon'ble Mr. Richards, the Hon'ble Mr. Apcar, the Hon'ble Nawab Saiyid Muhammad Sahib Bahadur, the Hon'ble Sir Steyning Edgerley and the mover.

The Hon'ble MUNSHI MADHO LAL said:—"My Lord, with Your Excellency's permission I would like to make a few observations with reference to the Presidency Banks Amendment Bill now before the Council, which is going to be referred to the Select Committee.

"I venture to suggest that the power that it is proposed to confer on the Presidency Banks as regards the advancement of loans to the Court of Wards may be extended a little further so as to empower the Banks to advance money also to solvent landowners on their own credit and on the security of their estates.

"By the term 'solvent landowners' I mean landowners whose management may be as efficient as that of the Court of Wards and whose credit in the estimation of the public may not be inferior to that of the Court.

"It often happens that such solvent landowners are sometimes in want of money and are anxious to have a loan as a temporary accommodation They have recourse to the assistance of petty bankers who take advantage of their difficulty and charge exorbitant rates of interest on the monies advanced by them.

"I am aware that Presidency Banks are not allowed to lock in their funds in non-liquid investments, such as loans on landed property; but I may be allowed to submit that loans to such landowners may be made on the same principle as the one upon which the Bill proposes to advance loans to the Courts of Wards, *viz.*, upon their credit and on the security of the estates under their superintendence.

"I suppose that such loans are proposed to be advanced because they are regarded as liquid investments, *viz.*, the loans can be realized as soon as the Banks want to have their money back. But to all intents and purposes such loans will have to be given on the credit of the Court of Wards and on the security of the estate of the debtor.

"I have the honour to propose that loans may also be given to large landed proprietors whose credit may be as good as that of the Courts of Wards and whose estates may be as valuable as those that come under their superintendence. I am sanguine that there will be no difficulty in realizing the amounts thus advanced. It is clear that such loans will also be granted under the same restrictions as govern the case of the Courts of Wards, *viz.*—

(i) sanction of the Local Government,

(ii) a period not exceeding six months.

"Strictly speaking, the loans that the Bill proposes to grant to the Courts of Wards are loans granted on their credit. Similarly, the grant of loans to big landholders will also be made on their credit subject to the control of the Local Government.

"It need hardly be said that the Government does not stand as surety for the loans advanced to the Court of Wards, and that, if it gives anything at all, it gives only moral influence and support to the institution.

"I have been constrained to make these observations in the interest of big landholders, and I hope that they will be favourably considered by this Hon'ble Council and the Select Committee to which the Bill may be referred."

The Hon'ble MR. BAKER said:—"My Lord, I am a *little* doubtful whether the Hon'ble Member is, strictly speaking, in order in making his observations on the occasion of the present motion. The present motion, which is substantially of a formal character, is merely to refer the Bill to a

Select Committee; but inasmuch as the Hon'ble Member was good enough to explain to me yesterday that he intended to make some remarks, I shall, with Your Excellency's permission, state briefly what I consider are the objections to the proposal. The nature of the proposal, briefly, is that Presidency Banks should be empowered to make loans to what the Hon'ble Member describes as 'solvent landlords' on the security of their estates, subject to the same restrictions and in the same way as loans which it is proposed by the Bill that they may be permitted to make to estates under the management of the Court of Wards. I cannot assent to this proposal. Hitherto the Presidency Banks have had no power to advance money on the security of landed property, and this restriction has been imposed for the sufficient reason that if they did, their funds might be locked up in what the Hon'ble Member describes as a non-liquid form. The Bill proposes to allow a very restricted exception to this by empowering them to lend money to the Courts of Wards for not more than six months at a time and subject to the sanction of the Local Government. Financial purists might take exception even to this closely safeguarded concession, and I myself should regard it with considerable doubt if I thought it likely to be made use of very largely. I believe, however, that the limitation of six months will in practice effectively restrict its operation. But the wide extension advocated by the Hon'ble Member seems to me to be wholly indefensible. In the case of the Court of Wards, Government management and the sanction of the Local Government afford a guarantee not only of ultimate solvency, but also that the loan will be liquidated on its maturity. In the case of private estates there will be no such security. The Local Government can possess no information as to whether private estates are solvent or not, or whether the owner, even if solvent, is able to repay the loan within the time prescribed. It seems to me that the extension which the Hon'ble Member proposes is far too dangerous to be permitted, and I should certainly advise the Council and the Members of the Select Committee not to entertain it."

The motion was put and agreed to.

REPEALING AND AMENDING (RATES AND CESSES) BILL.

The Hon'ble SIR DENZIL IBBETSON moved for leave to introduce a Bill to repeal and amend certain enactments relating to abolished rates and cesses. He said :—"The purport of the Bill is explained in the Statement of Objects and Reasons."

The motion was put and agreed to.

The Hon'ble SIR DENZIL IBBETSON introduced the Bill.

The Hon'ble SIR DENZIL IBBETSON moved that the Bill, together with the Statement of Objects and Reasons relating thereto, be published in the *Gazette of India* in English and in the local official Gazettes of Madras, Bombay, Bengal, Eastern Bengal and Assam, the Punjab, the Central Provinces and Coorg in English and in such other languages as the Local Governments think fit.

The motion was put and agreed to.

LOCAL AUTHORITIES LOAN (AMENDMENT) BILL.

The Hon'ble MR. BAKER moved for leave to introduce a Bill further to amend the Local Authorities Loan Act, 1879. He said :—"My Lord, the circumstances which have led us to consider that this amendment is necessary are as follows.

"The present Act empowers a local authority to borrow money 'for the carrying out of any *works* which it is legally authorised to carry out.' Some time ago, the Howrah Municipality desired to make a survey of that town, and

proposed to raise a loan of a lakh of rupees to defray the cost of it. On reference to the law officers, however, it was held by them that a survey was not a 'work' within the meaning of the Act, and that it was therefore not open to the Municipality to raise a loan for such a purpose. Now a survey is a necessary and integral preliminary to many works of municipal improvement, such as drainage, or the clearance of congested areas: and it is desirable that there should be no legal bar to the raising of loans for such an object.

"It is also possible that there may be other objects of public utility which cannot strictly be described as 'works' within the meaning of the Act. We propose, therefore, to amend the law so as to permit of the borrowing of money by a local authority for any purpose to which its funds may legally be applied."

The motion was put and agreed to.

The Hon'ble MR. BAKER introduced the Bill.

The Hon'ble MR. BAKER moved that the Bill, together with the Statement of Objects and Reasons relating thereto, be published in the Gazette of India in English, and in the local official Gazettes in English and in such other languages as the Local Governments think fit.

The motion was put and agreed to.

CENTRAL PROVINCES BOILER INSPECTION BILL.

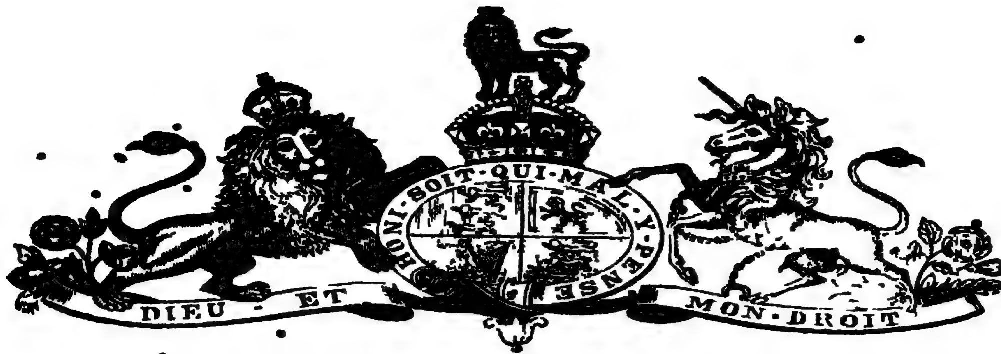
The Hon'ble MR. HEWETT moved for leave to introduce a Bill to provide for the inspection of Steam-boilers and Prime-movers and for their management by competent Engineers in the Central Provinces. He said:—"My Lord, there is at present no legal provision for the licensing and inspection by competent authority of boilers and prime-movers in the Central Provinces, or for their management by properly qualified engineers. Owing to industrial expansion, there has been a rapid growth in the number of boilers and prime-movers in the Province, and it is now necessary to provide a machinery by means of which the use of unsafe boilers can be guarded against. The Bill, which has been modelled on the lines of the Bombay Boiler Inspection Act, 1891, is intended to provide this. Similar Acts, passed in the Local Legislative Councils, are in force in many Provinces; but, as there is no Legislative Council in the Central Provinces, it is necessary to introduce the Bill in this Council.

"The Bombay Act has been selected as a model, as it is already in force in Berar. It will eventually be necessary, for the sake of uniformity, to apply the Central Provinces Act to Berar, and the course now adopted will, it is anticipated, enable this to be effected with the minimum of administrative inconvenience.

"The provisions of the Bill do not differ materially from those of the Bombay Boiler Inspection Act, and none of the clauses call for any special remarks."

The motion was put and agreed to.

The Hon'ble MR. HEWETT introduced the Bill.



The Hon'ble MR. HEWETT moved that the Bill, together with the Statement of Objects and Reasons relating thereto, be published in the Gazette of India in English and in the Central Provinces Gazette in English and in such other languages as the Local Government thinks fit.

The motion was put and agreed to.

The Council adjourned to Friday, the 18th January, 1907.

J. M. MACPHERSON,
Secretary to the Government of India,
Legislative Department.

CALCUTTA:
The 15th December, 1906.

SUPPLEMENT TO

The Gazette of India.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law or which it has been customary to publish in the* CALCUTTA GAZETTE *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Rainfall Summary for the seven days ending at 8 h., on Thursday, the 20th December 1906, based on the Indian Daily Weather Reports of the period.

Weather was dry in north-west India for the first three days of the week, but on the 16th a considerable fall of pressure took place in Baluchistan and north-west India, and by the 17th a definite depression had passed into Sind and rain had fallen in Baluchistan. During the next two days the depression travelled eastwards through north-west India, and gave widespread light to moderate rain in the Frontier Province, the Punjab, north Rajputana and the west of the United Provinces, but by the 20th it had nearly disappeared and ceased to affect the weather in northern India. Pressure was low in the south-west of the Bay throughout the week, but rainfall was confined to the coast districts until the 19th, when it extended into the interior, and during that day was fairly general in the Madras Presidency.

Burma.—Weather was drier than usual throughout the week, but temperature was approximately normal.

North-east India and Orissa.—Skies were more or less clouded over this region during the greater part of the week, but no rain fell at any of the observing stations. Temperature was persistently above normal, except in Eastern Bengal and Assam, the excess being shown chiefly in night temperature, which on several occasions was from 3° to 9° higher than usual.

The United Provinces, Central India and the Central Provinces.—Weather was quiet throughout this area, except in the north-western and hill districts of the United Provinces, where light rain was received from a cold weather disturbance on the last two

days of the week. Temperature was high, and chiefly by night, during the whole of the period in the United Provinces, and on the last three days over the remainder of the division.

North-west India.—Dry weather prevailed in this region on the first four days, but conditions became unsettled during the 17th over the western desert in consequence of the appearance of a cold weather depression, which subsequently occasioned light to moderate rain in the North-west Frontier Province, the Punjab and Rajputana. The principal falls occurred in the interval between 8h. of the 18th and the following morning. Temperature was unusually high, particularly at nights, until the 18th, when a feeble cold wave entered northern India from the west: at the close of the week temperature was below normal over practically the whole of the division. As is usual under such conditions, the defect was shown mainly in the day temperature, which was, on the average of all stations, nearly 8° below normal in the Punjab and 6° in the North-west Frontier Province and Rajputana.

The Peninsula.—Rain fell on the east coast of Madras on the 14th, 15th, 18th, 19th and 20th, and extended into the interior on the last two dates. The only important feature of the temperature conditions was a moderate to large excess in the interior districts of Madras on the last three days.

The rainfall of the period, from the 30th November to the 20th December, was above the normal in the Punjab, the Frontier Province, Rajputana and Madras, and normal in the west of the United Provinces and in Hyderabad. In other parts of India defects were general, but the normal rainfall at this time of year is very small in most divisions, and the deficiency is in many cases insignificant.

The following summarises the chief rainfall amounts of the week, as reported at 8 h. each day:

December 14th, Nellore 2·46" and Madras 4·18".

" 15th, Madras 1·27".

" 17th, Trivandrum 1·62".

" 18th, Multan 0·40", Montgomery 0·20", Bikaner 0·22", Nellore 1·03", Madras 1·49" and Cuddalore 1·45".

" 19th, Meerut 0·75", Sirsa 0·56", Ludhiana 1·30", Sialkot 2·05", Cherat 1·84", Sambhar 0·80", Kurnool 1·05", Cuddapah 0·81", Cocanada 2·04" and Mysore 0·93".

" 20th, Masulipatam 1·10", Ootacamund 0·90", Coimbatore 1·46", Cochin 3" and Trivandrum 3·18".

Offg. Secretary to the Government of India.

SIMLA;
The 20th December 1906.

GOVERNMENT OF INDIA,

DEPARTMENT OF REVENUE AND AGRICULTURE.

Season and Crop Prospects for the week ending Saturday, 15th December 1906.

Burma.—No rain fell during the week. Reaping of early wet weather paddy has commenced in Maubin; is completed in Henzada and Kyaukpyu; and is progressing in nearly all the other districts. Reaping of late wet weather paddy has commenced in Yamethin and is progressing in thirteen districts and also in the Southern Shan States. Threshing of paddy has commenced in Henzada and the Northern Shan States. The cultivation of miscellaneous crops continues. Plucking of cotton is completed in Sagaing and Myingyan. Transplanting of tobacco has begun in Bassein. Reaping of sesamum has commenced in Sagaing. In Bassein a large area of tobacco plants has been destroyed by insects. In the Myinmu and Myaung townships of Sagaing late sown miscellaneous crops are withering for want of rain, which is wanted also in Pakokku, Mandalay, Meiktila and the Chin Hills. The condition of the standing crops is generally good and prospects are favourable. The price of paddy has fallen considerably in Mandalay, Maubin, Tavoy, and Shwebo and slightly in Kyaukpyu: it has risen slightly in Myingyan; elsewhere it is stationary.

Eastern Bengal and Assam.—The weather is seasonable. There was no rain during the week. Plucking and manufacture of tea continue. The tea season is practicably closed; the outturn is good in Nowgong and fair in Darrang. Ploughing for and sowing of mustard and pulses: plucking of cotton; and harvesting of winter rice are in progress. Insects are still causing damage to crops in parts of Kamrup. The prospects of cotton are bad in the Khasi and Jaintia Hills and fair elsewhere. Prospects of winter rice and of other standing crops are moderate Prices of common rice:—Manipur 17; Kohima 10; Rangamati and Silchar 9½; Bogra and Sibsagar 9; Noakhali 8 to 9; Faridpur 7 to 9; Dinajpur 8¾; Mymensingh, Barisal, Chittagong, Tezpur and Dibrugarh 8½; Dacca 8¼; Malda, Sylhet, Gauhati, Comilla and Nowgong 8; Pabna and Dhubri 7¼; Rampur Boalia and Jalpaiguri 7; Tura 6½ to 7: Shillong 6½ and Rangpur and Aijal 6 seers per rupee Prices have risen in five, fallen in ten; and have remained stationary in the remaining districts. Two hundred and sixteen persons received gratuitous relief in Sylhet. Three women are employed on test work in Dacca. Prices are daily falling and the condition of the people improving with the new crop now in the market.

Bengal.—There was no rain during the week. Harvesting operations of the winter rice crop are still in progress. Spring sowings are almost over in Bihar. They still continue in some places in Lower Bengal. Rain is needed for these crops in Gya, Saran, Champaran, Bhagalpur and Purnea. The prospects of the spring crops are reported to be unfavourable in Darbhanga where some damage has also been done by insects. Elsewhere the condition of the standing crops is generally favourable. The number of persons receiving gratuitous relief is—Muzaffarpur 2,105, Darbhanga 18,287. The number on test-works is—Muzaffarpur 81, Darbhanga 16 The number of persons on relief works in Darbhanga is 15,070. Fodder and water-supply are sufficient everywhere. The price of common rice has risen in six and fallen in ten districts.

United Provinces.—No rain fell during the week and the want of it is being felt in parts for spring crops. The poppy crop is doing well and sugarcane pressing is in progress. Slight injury to crops by locusts is reported in Garhwal, Bulandshahr, and Aligarh and by white-ants in Budaun. Except in Garhwal and Almora the condition of cattle is good. Markets are full, but fodder is scarce in Sitapur and Rai Bareli and in parts of Basti. Prospects on the whole are favourable and prices continue stationary.

The weekly report on the scarcity is as follows:—Agricultural conditions in the Gorakhpur district still show no change. Harvesting and threshing of late rice continue. Rain is urgently wanted for spring crops which are being irrigated. Supplies and fodder are sufficient but prices are rising. Numbers on relief are: on works 1,377, on gratuitous relief 1,350, total 2,727.

Punjab.—Slight rain has fallen in Ferozepore, Amritsar, Sialkot, Shahpur, Rawalpindi, Mianwali, and Multan. There are slight fluctuations in the prices of food grains; wheat is rising in Hissar and Rohtak and falling in Ambala, Sialkot, and Rawalpindi. Cotton picking and sugarcane pressing are in progress. Sowings of spring crops are still going on in some districts. The condition and prospects of the standing crops are good. Rain is needed for unirrigated crops in Hissar, Rohtak, Gurgaon, Amritsar, and Rawalpindi. The outturn of sugarcane is good; the outturn of cotton is poor in Multan, has

improved in Lyallpur, and is average in other districts. Locusts have done some damage to the standing spring crops in Mianwali, Lyallpur, and Multan. Cattle are generally in good condition. Fodder is sufficient. There are no complaints regarding the water-supply.

North-West Frontier Province.—Rain averaging from 18 cents to one inch and 24 cents fell during the week all over the Province and was beneficial to the standing crops and unirrigated spring sowings which are still in progress. The condition of the standing crops on irrigated and unirrigated areas is generally good. A flight of locusts passed over Dera and Kulachi tahsils in Dera Ismail Khan district and slightly damaged the crops. Harvest prospects and the probable outturn of autumn crops is fair. The water-supply is sufficient; the Kilapani supply in Dera Ismail Khan is below average. Fodder is procurable except in the Kulachi Tahsil. The condition of cattle is below average in Dera Ismail Khan, elsewhere it is good. Prices:—wheat 14⅝ to 17½; gram 16½ to 22; maize 15 to 27½; and bajra 18¼ to 20 seers per rupee.

Jammu.—There was good rain during the week. Prices are fluctuating. Prices:—wheat 11 to 20 and maize 15 to 32 seers per rupee. The condition of the standing crops is good. Fodder is sufficient except in Ramban and Kishtwar, where it is reported to be scarce. The rain has been beneficial to spring sowings which are in progress.

Kashmir.—The weather was bright except on the last day of the week when there was slight rain. Prices are almost stationary.

Rajputana.—Harvesting operations continue in some places and also sowings and watering for spring crops. Prospects are generally satisfactory. Damage by locusts and insects is reported from Marwar, Mewar and Tonk. Pasturage or fodder is sufficient. Prices are practically steady throughout but are still high in some places.

Central India.—No rain. Sowing of spring crops and harvesting of autumn crops are in progress. The standing crops and the probable outturn are good. Agricultural stock and pasturage are good. Prices are high in Gwalior and Baghelkhand; have slightly risen in parts of Malwa; are falling in Bundelkhand; and are steady elsewhere. Opium sowing is almost finished in Bhopawar and weeding of opium is in progress in some parts of Gwalior.

Central Provinces.—The weather is cool and clear with occasional clouds. Harvesting of autumn crops and spring sowings are approaching completion. Picking of cotton and threshing and winnowing of other crops continue. A shower is needed in Hoshangabad and Wardha to improve the condition of standing crops. Prospects are generally good. *Tur* in the Hinganghat tahsil (Wardha) has been much damaged by cloudy weather; *tur* and linseed in parts of Nagpur are also slightly injured from the same cause, insect pests have attacked *tur*, til, linseed and gram which were blossoming in Chanda tahsil and gram and *tur* in the Wun taluq (Yeotmal); in parts of Daryapur taluq (Amraoti) linseed and wheat crops have withered for want of moisture. Fodder and water are ample. The price of wheat fell in Akola by 1¼ seers per rupee; juar became cheaper by 2 seers in Damoh and dearer in Hoshangabad and Yeotmal by 1½ seers; elsewhere prices are steady but still continue equal to the scarcity level in Wardha, Nagpur, Balaghat and Bilaspur and exceed it in Chanda.

Bombay.—The standing spring crops are withering for want of rain in parts of the Deccan, the Karnatak and Kolhapur. There has been slight damage to crops by locusts in parts of Karachi, Larkana, Satara, and Mahi Kantha; by insects in parts of Karachi, Upper Sind Frontier, and Thar and Parkar; and by unfavourable winds in parts of Palanpur and Cutch; crops are generally in good condition elsewhere. Harvesting of autumn crops is nearly completed and threshing continues. Spring sowings are nearing completion. Cotton picking is progressing in Sukkur, Hyderabad, Thar and Parkar, Ahmedabad, the Deccan and Kathiawar. The supply of drinking water is sufficient and water for irrigation purposes is adequate except in parts of Nasik, Ahmednagar, Poona, and Sholapur. Agricultural stock is sufficient except in Thar and Parkar, Ahmednagar, Sholapur, Bijapur, and Cutch. The fodder supply is sufficient. The quantity of food grains purchaseable per rupee is in the Deccan and the Karnatak 23 per cent. above normal to 28 per cent less than normal, and elsewhere normal to 25 per cent. below. Labourers are getting sufficient employment in the fields.

Hyderabad.—There was no rain during the week. The autumn harvest is almost over; the early rice harvest is in progress. Spring crops are fair to good. Late rice is still being sown in parts. Prices:—wheat 8; coarse rice 7½; and jowar 16 seers per rupee.

Mysore.—The standing crops are in good condition and are being generally harvested. The prospects of the season are good. Cattle are healthy. Water and fodder are available.

Coorg.—Picking of cardamom is completed; picking of coffee continues. Reaping rice has commenced. Prices of food grains are stationary. Water and fodder are sufficient.

Madras.—The rainfall was very heavy in Madras;. heavy in Chingleput; good in South Arcot, Nellore, and Tanjore; *nil* in the Vizagapatam Agency, Guntur, the Deccan except Cuddapah; and light to fair elsewhere. Irrigation supplies are sufficient except in parts of the Circars, Kurnool, Bellary, Nellore, North Arcot, Salem and Madura. Ploughing, sowing, weeding, and transplanting are in progress in parts. The standing crops are generally fair, but *cholam* in parts of Bellary is diseased some crops in Tanjore have been damaged by heavy rain, and some in parts of Godavari and Kurnool need more rain. Harvest continues with outturn poor to normal and bumper. Pasture is sufficient except in parts of Kistna, Bellary and Nellore. Fodder is scarce in parts of Godavari, Kistna, Bellary, Anantapur, Salem, Tanjore and Madura. The condition of cattle is generally good. The price of rice is stationary in twelve districts; has fallen in nine; and has very slightly risen in two. Prices of millets have fluctuated as follows:—*ragi* is stationary in six districts; has fallen in six; and has slightly risen in nine. *Cholam* is stationary in three districts; has fallen in eight; and has slightly risen in four. *Cumbu* is stationary in four districts; has fallen in three; and has slightly risen in eight.

The number of persons in receipt of relief during the preceding and present weeks in each Province or State is shown in the following table:—

H. H. RISLEY,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

FACTORIES.

APPOINTMENT OF A COMMITTEE TO ENQUIRE INTO THE CONDITIONS OF FACTORY LABOUR IN TEXTILE FACTORIES IN INDIA

RESOLUTION—By the Government of India, Department of Commerce and Industry.

No. 9974—9993-13. Dated Calcutta, the 17th December 1906.

Acting on a suggestion made by His Majesty's Secretary of State for India, the Government of India have decided to appoint a small Committee to enquire into the conditions of factory labour in textile factories in this country. The investigation will be directed, in the first instance, towards ascertaining the actual conditions prevailing in India, and the observations of the Committee in this respect will supplement the reports recently received from Local Governments on the subject.

2. The enquiries to be made by the Committee will be directed more particularly towards the settlement of the questions set forth in paragraph 3 below; but they may also put forward recommendations for the amendment of the existing law or practice, if they are of opinion that the present hours of work of operatives are excessive, that the conditions of factory labour are otherwise injurious or oppressive, or that abuses exist in connection with the employment of children or young persons The Government of India desire that it should be clearly understood that the enquiry now to be held is preliminary only. Should the investigations of the Committee establish the existence of abuses which require to be remedied, a representative Commission will be appointed to consider the whole subject comprehensively before any radical changes in the present factory law are made.

3. Subject to the provisions of paragraph 2 above, the specific points referred to the Committee are as follows:—

(1) Whether the working hours of adult males should be limited, and whether the physique of operatives is affected by long hours.

(2) Whether before children are allowed to work in factories certificates of age and fitness should be required.

(3) Whether the minimum age of children should be raised beyond nine.

(4) Whether, as the result of employment as adults of persons between the ages of twelve and fourteen, there has been physical deterioration requiring the creation by law of a special class of workers known as young persons.

(5) Whether a separate staff of Medical Factory Inspectors should be entertained.

4. The Committee will consist of—

Commander Sir H. P. Freer-Smith, R.N., late Superintending Factory Inspector for Dangerous Trades in England,—*President*.

Lieutenant-Colonel J. F. MacLaren, M.B., I.M.S.,—*Civil Surgeon, Allahabad*.
Dr. J. A. Turner, M.B., D.P.H.,—*Health Officer, Bombay Municipality*.
} *Members*.

The Committee will assemble at Bombay on the 21st December, and it is anticipated that their report will be submitted to the Government of India in the beginning of April.

Ordered, that a copy of this Resolution be forwarded to all Local Governments and Administrations, with the request that the Committee may be given any assistance which they may require, and that any requests for information and advice which may be addressed to them by the Committee may be complied with.

Ordered, also, that a copy of the Resolution be forwarded to the Home and Finance Departments and to the President and Members of the Committee, and that the Resolution be published in the Supplement to the *Gazette of India*.

W. L. HARVEY,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

CUSTOMS.

LIST OF COTTON PIECE-GOODS

RESOLUTION.

No. 10115—10121-8

Dated Calcutta, the 21st December 1906.

WITH reference to paragraph 3 of the Resolution in the Department of Commerce and Industry, Nos. 5443—5449-8, dated the 13th July 1906, the Governor General in Council is pleased to prescribe the following revised "List of cotton piece-goods" in supersession of the list appended to that Resolution, as amended by Resolution Nos. 6520—6526-8, dated the 21st August 1906.

— — —

ORDER.—Ordered that a copy of the Resolution be forwarded to the Government of — Bombay, Revenue Department; Madras, Revenue Department; Bengal, Financial Department; Burma, Revenue Department; E. B. and Assam, Financial Department, for information and communication to the Customs authorities and the commercial associations concerned, in continuation of the endorsement from this Department, Nos. 6520—6526-8, dated the 21st August 1906.

Ordered also, that a copy be forwarded to the Director General of Commercial Intelligence, for information, in continuation of the endorsement from this Department, Nos. 6520—6526-8, dated the 21st August 1906.

Ordered also, that the Resolution be published in the Supplement to the *Gazette of India* for general information.

W. L. HARVEY,
Secretary to the Government of India.

FOREIGN DEPARTMENT.

NOTIFICATIONS.

Fort William, the 27th December 1906

No. 5096-*I.B.*—Whereas His Highness the Maharaja of Travancore and His Highness the Raja of Cochin have ceded to the British Government full and exclusive power and jurisdiction of every kind over the lands lying within their respective States which are, or may hereafter be, occupied by the Shoranur-Cochin Railway (including the lands occupied by stations, by outbuildings, and for other railway purposes) and over all persons and things whatsoever within the said lands :—

In exercise of such power and jurisdiction and of the powers conferred by the Indian (Foreign Jurisdiction) Order in Council, 1902, the Governor General in Council is pleased to provide as follows for the administration of justice within the said lands :—

(1) The said lands shall be deemed to be part of the Cochin taluk of the Malabar District.

(2) All laws for the time being in force in the Malabar District of the Madras Presidency shall be deemed to be in force in the said lands.

(3) The Governor in Council of Fort St. George and all officers subordinate to the Government of Madras who for the time being exercise authority within the Cochin taluk of the Malabar District, shall exercise the like authority within the said lands.

Provided that the superintendence of police within the said lands shall, under the general control and superintendence of the Inspector General of Police of the Madras Presidency, be vested in the Superintendent of Railway Police, who may be appointed in this

behalf by the Governor in Council of Fort St. George and shall exercise throughout the said lands all the powers of a District Superintendent within the meaning of the Madras District Police Act, 1859 (XXIV of 1859).

(4) All Courts having jurisdiction within the Cochin taluk of the Malabar District shall have the like jurisdiction within the said lands.

(5) The Notifications of the Government of India in the Foreign Department, Nos. 4862-I.B. and 166-I.B., dated respectively the 2nd November 1900 and 11th January 1901, are hereby cancelled.

The 28th December 1906.

No. 5119-*I.B.*—In exercise of the powers conferred by the Indian (Foreign Jurisdiction) Order in Council, 1902, the Governor General in Council is pleased to appoint the persons for the time being holding the offices designated in the first column of the following schedule, being European British subjects, to be Justices of the Peace for the Native States mentioned opposite their designations in the second column of that schedule, respectively —

CANTONMENT MAGISTRATE'S DEPARTMENT.

No. 706.—The services of Captain R. L. Morris, an Officiating Assistant Cantonment Magistrate, are placed at the disposal of the Government of the United Provinces for employment as an Officiating Cantonment Magistrate.

No. 707.—The services of Captain W. C. Anderson, 73rd Carnatic Infantry, are placed at the disposal of the Punjab Government for employment as an Officiating Assistant Cantonment Magistrate.

JUDICIAL.

No. 708.—In exercise of the powers conferred by Article 190 of the Indian Articles of War (Act V of 1869), the Governor General in Council is pleased to direct that at the end of the first sentence of Rule 164 of the *Rules of Procedure (Native Army)*, issued with the Notification of the Government of India in the Military Department No. 710 (Judicial), dated the 30th June 1899, as amended up to date, the following addition shall be made —

In the case of reservists of Military Railway Companies.	The adjutant of the Volunteer Corps of the Railway in whose service the reservists are serving.

LANGUAGES.

No. 709.—With the approval of the Right Honourable the Secretary of State for India, the Government of India sanction the institution of a new literary examination in Urdu, intermediate between the higher standard and the high proficiency tests, to be called the 'Proficiency' examination.

Despatch from Secretary of State for India, No. 32 Public, dated 9th March 1906

The following rules for the examination of military officers are published for general information. They will have effect from the 1st July 1907:—

I. The examination will be open to officers who can, under the existing regulations, appear at the high proficiency examination in Urdu.

II. A reward of R750 will be granted to successful candidates.

III. No officer will be permitted to appear more than three times as a candidate at the examination.

IV. No officer will be eligible for the reward unless he passes the examination before the completion of ten years, counted from the date of his first arrival in India. No exception to this rule will be made on account of leave or any other cause.

V. The examination will be held quarterly on the first Monday in January, April, July and October of each year, by the Boards of Examiners at Calcutta and Madras and the Civil and Military Examination Committee at Bombay. Officers will be examined each in his own presidency; those serving in Burma, will be examined in Madras.

VI. Officers desirous of attending the examination must submit their applications, to reach the Brigade or Divisional Office by the 1st and the Secretary of Board of Examiners by the 15th of the preceding month.

VII. The examination will be of a searching nature, the tests, both oral and written, must be performed with such excellence as to indicate real proficiency.

VIII. To qualify as proficient, candidates must obtain not less than 35 per cent. of marks in each subject and 60 per cent. in the aggregate.

IX. The following are the subjects of examination:—

	Marks
(*a*) Written translation from English into Urdu	100
(*b*) Written translation into English of passages from the prescribed text book (Kalam-i Urdu) . . .	100

NOTE.—The text book is obtainable either from the Office of the Board of Examiners or from Messrs. Thacker Spink & Co., Calcutta.

	Marks.
(*c*) An easy paper in Grammar	100
(*d*) Reading and translating in Urdu manuscript of moderate difficulty	100
(*e*) Conversation, including a paper of short idiomatic sentences in English to be translated into Urdu orally at sight	200

Notifications by High Court, Comptroller General, etc.

GAZETTE OF INDIA.

NOTICE.

The 25th October 1906.

From the 10th November next till further notice, the complete *Gazette of India* will be published at Calcutta. After the 3rd November all notifications and other matter intended for publication in the *Gazette* should be addressed to the Publisher, 8, Hastings Street, Calcutta.

Attention is invited to the following Circular Memorandum of the Government of India, Home Department, of August 1901:—

"It has been brought to the notice of this Department that matter for the *Gazette of India* is sometimes sent to the Press late on Friday evenings for publication in the next day's *Gazette*, and that this involves considerable inconvenience to the Press and expense to Government. In the Circular Memorandum of this Department, No. 777—79, dated 9th February 1870, the Government of India directed that all notifications or other matter intended for insertion in the *Gazette of India* should be delivered at the Press not later than 2 P.M. on Friday, and that any papers sent thereafter must be certified to be extremely urgent in order to ensure their appearance in the next day's *Gazette*. The undersigned is directed to request that these orders may be more strictly observed in future, and that Departments will refrain from sending to the Press as extremely urgent any papers which can without harm or inconvenience be held over for the next *Gazette*."

J. P. HEWETT,
Secretary to the Government of India

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

INVENTIONS and DESIGNS.

Calcutta, the 27th December 1906.

NOTIFICATIONS.

No. 5029 P.—APPLICATIONS in respect of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act during the week ending 24th December 1906 :—

No. 617 of 1906.—Charles Henry Brooke, engineer, of 59 Ezra street, in the city of Calcutta, India. *Improvements in capping machines and caps for kerosene oil cans and the like.*

No. 618 of 1906.—Frederick Shirtliff, engineer, Great Eastern Hotel, Calcutta. *Improvements in baling presses.*

No. 619 of 1906.—The Western Syndicate, Limited, manufacturers, of 31 Budge Row, in the city of London, England. *Improvements relating to signalling on railways.*

No. 620 of 1906.—Edward Jacob Hill, engineer, of 11 Victoria street, Westminster, London, England. *Improvements in or relating to couplings for railway vehicles.*

No. 5030 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, United Provinces of Agra and Oudh. These and other specifications are open to public inspection from 11 A.M. to 3 P.M. at the Secretary's office, 2 Bankshall Street, Calcutta, on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying :—

No. 41 of 1906.—Roger John Dennett, workshop foreman, B. N. Railway Workshop, Shalimar. *Securing signals at danger which will be called Dennett's Secure Signal Lock.* (Specification filed 29 October 1906.)

No. 223 of 1906.—Alfred Lines, assistant engineer, on the North-Western Railway of India, Lahore. *Improvements in railway sleepers.* (Specification filed 11 December 1906.)

No. 237 of 1906.—Edward Shaw, engineer, of Broad Street House, in the city of London, England. *Improvements in and means or apparatus for evaporating liquids.* (Specification filed 12 December 1906.)

No. 264 of 1906.—Carl Lorenz, engineer, Redfern, in the state of New South Wales, in the commonwealth of Australia. *An automatic regulator or governor for steam or other engines of a like class.* (Specification filed 15 December 1906)

No. 293 of 1906.—International Telegraphic Call Company, a corporation duly organized, incorporated and existing under the laws of the state of West Virginia, United States of America, and having their principal office at No. 95 William street, city, county and state of New York, United States of America. *Improvements in signal selecting apparatus.* (Specification filed 15 December 1906.)

No. 295 of 1906.—Francis Fernandez, gentleman, of 8 Byculla Cottages, Foras road, Bombay, British India. *Improvements in carriage and similar wheels.* (Specification filed 15 September 1906.)

No. 377 of 1906.—Allan Macgregor Ritchie, architect, of Durban, in the county of Natal, and Frederick Margrie, electrical engineer, also of Durban aforesaid. *Improvements in or relating to field firing or surprise targets.* (Specification filed 17 December 1906.)

No. 5031 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 195 of 1895.—Ebenezer Benton Beecher and Jacob Pulver Wright. *Improvements in and relating to machines for making wax matches.* (From 21 December 1906 to 21 December 1907.)

No. 212 of 1895.—George Alexander Dick. *Improvements in the manufacture of wire, rods, bars, or tubes from various copper alloys, and in apparatus therefor, which apparatus can be used for making wires, rods, bars, or tubes from other alloys or metals.* (From 27 December 1906 to 27 December 1907.)

No. 214 of 1897.—James Albert Bonsack and Hugo Bilgram. *An automatic feed mechanism for cigarette fillers.* (From 30 December 1906 to 30 December 1907.)

No. 86 of 1901.—Darling's Patent Automatic Coupling, Limited. *Improvements in automatically coupling and uncoupling railway carriages, wagons, and similar vehicles.* (From 16 December 1906 to 16 December 1907.)

No. 448 of 1901.—Percy Hulburd. *Improvements in cocks or valves.* (From 6 January 1907 to 6 January 1908.)

No. 449 of 1901.—Percy Hulburd. *Improvements in joint rings or washers for steam and other pipes.* (From 6 January 1907 to 6 January 1908.)

No. 452 of 1901.—Percy Hulburd. *Improvements in or connected with the mounting or fixing of the glass tubes of sight feed lubricators, water gauges and the like.* (From 6 January 1907 to 6 January 1908.)

No. 5032 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2), of the said Act the exclusive privilege of making, selling, and using the said inventions in British India, and of authorising others so to do, has ceased.—

No. 28 of 1902.—The Cotton Seed Company, Limited. *Improvements in or relating to the treatment of cotton seed hulls.* (Specification filed 18 September 1902.)

No. 287 of 1902.—Henry Montgomery Crozier. *A new or improved locking device.* (Specification filed 20 September 1902.)

No. 298 of 1902.—Ferdinand Fritz. *Improvements in the manufacture of fuel from peat.* (Specification filed 16 September 1902.)

No. 306 of 1902.—Thomas Aspinall. *Improvements in or relating to the method of sizing and finishing cotton, linen and the like fabrics.* (Specification filed 17 September 1902.)

Fee in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof —

The sum of R50 for each of the above inventions.

No. 438 of 1898.—William Walter Lean. *Improvements in or relating to the secure fastening of spurs.* (Specification filed 16 September 1899.)

Fee in respect of the continuance of an exclusive privilege—

4 (*d*) After the expiration of the sixth year and before the expiration of the seventh year from the date of the filing of the specification—

The sum of R50 for the above invention.

NOTICES.

All communications relating to applications for leave to file specifications and for registration of designs under the Inventions and Designs Act, 1888 (V of 1888), or in continuation of such applications, should be addressed to the Patents Secretary, 2, Bankshall Street, Calcutta.

The Office of the Secretary under the Inventions and Designs Act, 1888, will in future be open for the transaction of business from 11 A.M. to 3 P.M. on all days, except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Cheques and money orders will only be accepted if made payable *at Calcutta* to the Secretary under the Inventions and Designs Act.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's Office are now on sale to the public at one anna and eight annas a copy, respectively. A consolidated index for the year 1905, entitled "Inventions and Designs in 1905," is also on sale, price one rupee. It contains a chronological list, subject-matter and name indexes of exclusive privileges for inventions, which have been obtained or applied for in that year, together with lists of designs applications.

Attention is requested to the rules made by the Government on the 10th October 1895 in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitors' room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified: or, if the 10th day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

The Inventions and Designs Act (V of 1888), with the notifications and rules issued under its provisions and the notices of the office of Inventions and Designs, to which is added an explanatory memorandum for the guidance of persons applying for protection of Inventions and Designs. Royal 8vo volumes, paper cover, 13 annas or 1*s.* 1*d.* Postage extra. To be had of the Superintendent, Government Printing, 8, Hastings Street, Calcutta, or of the Superintendent, Patents Branch, Department of Commerce and Industry, 2, Bankshall Street, Calcutta.

The Patents Office will be closed to the public from 3 P.M., 22nd December 1906, to 11 A.M., 2nd January 1907.

H. G. GRAVES,
Secretary under the Inventions and Designs Act, V of 1888.

* There was no transfer of Gold between the Paper Currency Reserve and the Gold Standard Reserve during the week ending 21st December 1906.
† In addition to amounts shown in columns 6 and 10, about 44 lakhs of tolas of Silver have been purchased from treasury funds.
The Silver held in the Gold Standard Reserve (which is quite distinct from the Paper Currency Reserve) amounted on the 21st December 1906 to 138 lakhs of tolas.
‡ Temporarily transferred from the Silver Branch of the Gold Standard Reserve.

O. T. BARROW,
Head Commissioner of Paper Currency.

THE HONOURABLE THE AGENT TO THE GOVERNOR-GENERAL IN BALUCHISTAN.

NOTIFICATION.

Dated Quetta, the 11th December 1906.

No. 5982.—The following draft rules framed in exercise of the powers conferred by section 9 of the Indian Petroleum Act, 1899 (VIII of 1899), which it is proposed to issue are published for the information of all persons likely to be affected thereby. Notice is hereby given that the said draft rules will be taken into consideration on or after the 1st February 1907.

2. Any objection or suggestion which may be received from any person with respect to the said draft rules before the date aforesaid will receive consideration.

By order,
A. L. JACOB, Captain,
First Assistant.

PART I.

PRELIMINARY.

RULES.

1. Definitions.

PART II.

POSSESSION AND TRANSPORT OF PETROLEUM.

CHAPTER I.—OF POSSESSION OF PETROLEUM.

1. Smoking prohibited.
2. Supervision of operations within installation.
3. Cleanliness of installation.
4. Supply of sand in installation.
5. Enclosure walls and embankments.
6. Marking of capacity of tanks.
7. Protection from lightning
8. Testing of lightning-conductor by licensee.
9. Official testing of lightning-conductor.
10. Time for work in installations.
11. Closure of pipes and openings.
12. Materials for sheds and godowns.
13. Posting up of rules and conditions.

CHAPTER II.—GENERAL PROVISIONS RELATING TO LICENSES.

1. Applications for licenses.
2. Licensing authority.
3. Refusal of license.
4. Forfeiture of license.
5. Particulars of license.
6. Renewal of licenses.
7. Supply of rules to licensee.

CHAPTER III.—LICENSES FOR THE POSSESSION OF PETROLEUM.

1. Continuance of license.
2. Petroleum not in bulk other than dangerous petroleum.
3. Transfer of certain licenses.
4. Dangerous petroleum not in bulk.
5. Dangerous petroleum not exceeding forty gallons.
6. Storage in major installations.
7. Storage in minor installations.
8. Storage of crude petroleum in bulk.
9. Dangerous petroleum for use on motor vehicles.
10. Storage by local authority.

CHAPTER IV.—OF LICENSES FOR THE TRANSPORT OF PETROLEUM.

1. General licenses for the transport of non-dangerous petroleum.
2. General licenses for the transport of dangerous petroleum.
3. Effect of general license.
4. Pass for transport of petroleum.
5. Special licenses for the transport of petroleum other than dangerous petroleum.
6. Special licenses for the transport of dangerous petroleum.
7. Effect of special license.
8. Particulars to be given in application for special licenses.
9. Transport of dangerous petroleum by motorists otherwise than on a motor-vehicle.
10. Validity of license granted in another province.

CHAPTER V.—FEES.

1. Method of levying fees.
2. Fees for licenses for possession of petroleum.
3. Fees for licenses for transport of petroleum.

DRAFT RULES UNDER SECTION 9 OF THE INDIAN PETROLEUM ACT, 1899, FOR THE IMPORTATION POSSESSION AND TRANSPORT OF PETROLEUM IN THE TERRITORIES ADMINISTERED BY THE AGENT TO THE GOVERNOR-GENERAL IN BALUCHISTAN.

PART I.

PRELIMINARY.

Definition.

1. In these rules,—

(*a*) "Part" means a part of these rules;

(*b*) "petroleum in bulk" means petroleum in quantities exceeding five hundred gallons, contained in any one receptacle;

(*c*) "installation" means a place specially prepared for the storage of petroleum;

(*d*) "major installation" means an installation—

(*1*) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, exceeding fifty thousand gallons, or

(*2*) in which tin-making operations are carried on;

(*e*) "minor installation" means an installation—

(*1*) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, not exceeding fifty thousand gallons, and

(*2*) in which no tin-making operations are carried on;

(*f*) protected works" includes buildings in which persons dwell or assemble, timber yards, other petroleum stores, and any other place which the Local Government may declare as such by Notification;

(*g*) "motor-vehicles" includes a motor bicycle, and a motor tricycle; and

(*h*) "owner" as applied to a motor-vehicle, includes a person who hires, or is otherwise entitled for the time being to use or work, a motor-vehicle.

PART II.

POSSESSION AND TRANSPORT OF PETROLEUM.

CHAPTER I.—POSSESSION OF PETROLEUM.

Smoking prohibited.

1. No smoking shall be permitted inside any installation.

Supervision of operations within installation.

2. All operations within any installation shall be conducted under the supervision of a responsible Agent or Supervisor.

Cleanliness of installation.

3. The ground in the interior of an installation shall be kept clean and free from goods of a combustible nature, vegetation and rubbish.

Supply of sand in installation.

4. A sufficient supply of sand shall always be kept in an installation for the purpose of extinguishing fire.

5. All enclosure walls and embankments required to be constructed by or under these rules shall be certified as being sufficient to ensure safety by a Railway Engineer in the case of installations constructed on Railway premises, and in the case of other installations by an Engineer accepted as qualified for this purpose by the Local Government.

Enclosure walls and embankments.

6. The capacity in gallons of every tank and storage shed or godowns in an installation shall be conspicuously marked on it, and shall be calculated as follows:—for tanks, at the rate of 6·25 gallons per cubic foot; for sheds and godowns, at the rate of 10 gallons per 3 cubic feet.

Marking of capacity of tanks.

7. Every tank or other receptacle for the storage of petroleum in bulk, except a tank or receptacle which is not of sufficient capacity to contain ten thousand gallons of petroleum and which is so situated as not to be liable to cause danger in the event of the petroleum being ignited, shall be protected by an efficient lightning-conductor.

Protection from lightning.

Explanation.—A tank or receptacle shall be deemed to be so situated as not to be liable to cause danger in the event of the petroleum being ignited, if it is not in close proximity to any other tank or receptacle, or to any building and if it is surrounded by a wall, or moat, or combination of both, sufficient to prevent the flow of petroleum beyond certain circumscribed limits in the event of the escape of the whole contents of the tank when full.

8. Not less than once in every year the licensee of an installation shall test or cause to be tested the efficiency of the conductor in such manner as the authority granting the license may, by general or special order, declare to be sufficient, and a certificate showing the date of the last test shall be posted in a conspicuous place within the installation.

Testing of lightning-conductor by licensee.

9. Any officer appointed by a Local Government in this behalf may enter any installation for the purpose of testing the efficiency of the conductor, at any time after sunrise and before sunset.

Official testing of lightning-conductor.

10. No installation shall be open, and no work in any installation shall be permitted, between sunset and sunrise: provided that in cases where electric lighting is exclusively used, night working may be permitted by the Local Government on the recommendation of the Chief Inspector of Explosives.

Time for work in installations.

11. Where there are any pipes or openings for draining out water in any enclosure wall, arrangements shall be made whereby they can be closed, and they shall only be kept open when actually necessary for drainage purposes. The nature of such arrangements shall be shown in the specifications submitted with the application for a license.

Closure of pipes and openings.

12. All sheds or godowns in an installation for the storage of oil in tins, drums or cases shall be built of uninflammable material.

Materials for sheds and godowns.

13. There shall be hung up in a conspicuous place in every installation for which a license has been granted, copies, in English and the Vernacular, of the rules contained in this Part, and of the conditions endorsed on the license.

Posting up of rules and conditions.

CHAPTER II.—GENERAL PROVISIONS RELATING TO LICENSES.

1. All applications for licenses for the possession or transport of petroleum shall be made to the District Magistrate.

Applications for licenses.

2. Licenses (*a*) for the possession or transport of dangerous petroleum in quantities not exceeding forty gallons, (*b*) for the possession or transport of petroleum, not being dangerous or crude petroleum nor petroleum in bulk, and (*c*) for the possession of petroleum, in bulk or otherwise, in a minor installation, may be granted by a District Magistrate or by such other authority as the Local Government may from time to time by order in writing appoint in this behalf. In all other cases the licensing authority shall be the Local Government.

Licensing authority.

3. The licensing authority may, for reasons to be communicated to the applicant, refuse a license in any case: provided that when a license is refused by any authority other than the Local Government, such refusal shall be reported to the Local Government.

Refusal of license.

4. Every license granted under these rules shall be liable to be forfeited for any contravention of the Act, or of any rule thereunder, or of any condition contained in such license, or for any other reason deemed by the licensing authority to be good and sufficient, and recorded by him in writing.

Forfeiture of license.

5. Every license and pass granted under these rules shall be held subject to the conditions endorsed on it, and shall contain all the particulars required to be entered on it by the form prescribed for it under these rules.

Particulars of license.

6. (1) Every application for the renewal of a license shall be made in the same manner as an application for an original license.

Renewal of licenses.

(2) Every such application shall be made at a date not less than fifteen days before the date on which the original license expires.

(3) The same fee shall be charged for the renewal of a license as for a new license.

7. When any license is granted for the possession or transport of petroleum a copy of the rules contained in Chapter I of this Part in the case of a license for possession, and rule 10 of Chapter IV of this Part in the case of a license for transport, printed in English and the Vernacular, shall be given, together with the license, to the licensee.

Supply of rules to licensee.

CHAPTER III.—LICENSES FOR THE POSSESSION OF PETROLEUM.

1. Save as provided in rule 10 of this Chapter, every license for the possession of petroleum shall remain in force until the 31st of December next following the date of issue of the license.

Continuance of license.

2. Licenses for the possession of petroleum, not being dangerous petroleum, otherwise than in bulk, may be granted in Form A.

Petroleum not in bulk, other than dangerous petroleum.

3. (1) The holder of a license in Form A may, at any time before the expiry of the license, apply for permission to transfer his license, to another person.

Transfer of certain licenses.

(2) Such application shall be made to the District Magistrate, who shall, if he approves of the transfer, enter upon the license, under his signature, an endorsement to the effect that the license has been transferred to the person named.

(3) A fee of R5 shall be charged on each such application.

(4) The person to whom the license is so transferred shall enjoy the same powers and be subject to the same obligations under the license as the original holder.

4 Licenses for the possession of dangerous petroleum not in bulk in quantity exceeding forty gallons may be granted in Form B

Dangerous petroleum not in bulk.

5. Licenses for the possession of dangerous petroleum in quantity not exceeding forty gallons may be granted in Form C.

Dangerous petroleum not exceeding forty gallons.

6. Licenses for the possession of any stated quantity of petroleum in major installations in accordance with such specifications and plans as may be approved by the Local Government, on the recommendation of the Chief Inspector of Explosives, may be granted in Form D.

Storage in major installations.

7. Licenses for the possession of any stated quantity of petroleum in minor installations in accordance with such specifications and plans as may be approved by the Local Government on the recommendation of the Chief Inspector of Explosives, may be granted in Form E.

Storage in minor installations.

8. Subject to such conditions as may be prescribed by the Local Government in each case, licenses in Form F may be granted to any person engaged in the extraction of petroleum from wells for the possession of any quantity of crude petroleum in any place of storage at or near such wells.

Storage of crude petroleum in bulk.

9. (1) Licenses in Form G may be granted free of charge for the possession of dangerous petroleum for use on motor-vehicles and for its transport thereon, for the purpose of use therein.

Dangerous petroleum for use on motor-vehicles.

(2) Save in the cases provided for by the conditions of the license, the provisions of the ordinary rules relating to the possession of dangerous petroleum shall regulate the possession of dangerous petroleum for use on motor-vehicles.

10. Licenses for the possession of petroleum in an installation may be granted free of charge to any local authority, subject to such conditions and for such period, as the Local Government may direct.

Storage by local authority.

CHAPTER IV.—LICENSES FOR THE TRANSPORT OF PETROLEUM.

1. General licenses for the transport of petroleum, other than dangerous petroleum, may be granted for a period of twelve months in Form H.

General licenses for the transport of non-dangerous petroleum.

General licenses for the transport of dangerous petroleum.

2. General licenses for the transport of dangerous petroleum otherwise than in bulk, may be granted for a period of twelve months in Form I.

Effect of general license.

3. Licenses granted under rules 1 and 2 of this Chapter may authorise the holder to transport petroleum without restriction as to destination or total quantity.

Pass for transport of petroleum.

4. The holder of a general license granted under rules 1 or 2 of this Chapter shall, with each consignment of petroleum conveyed under cover of his license, issue to the person who takes charge of the petroleum for the purpose of transporting it a numbered Pass in Form J.

Special licenses for the transport of petroleum other than dangerous petroleum.

5. Special licenses may be granted for the transport of petroleum, other than dangerous petroleum, in quantities exceeding five hundred gallons, in Form K.

Special licenses for the transport of dangerous petroleum.

6. Special licenses may be granted for the transport of dangerous petroleum other than in bulk in Form L.

Effect of special license.

7. A special license granted under rules 5 and 6 shall only cover the transport of the particular consignment entered in the license.

Particulars to be given in applications for special licenses.

8. Applications for special licenses for the transport of petroleum by rail, or by road or by both, shall specify the description and quantity of petroleum to be transported, and the places from and to which, respectively, the petroleum is to be conveyed, and shall describe the receptacles in which it is to be contained.

Transport of dangerous petroleum by motorists otherwise than on a motor-vehicle.

9. Licenses in Form M. to transport dangerous petroleum, otherwise than on a motor-vehicle, may be granted to owners of motor-vehicles holding licenses under rule 9, sub-rule (1) of Chapter III of this Part, to possess petroleum and use or transport it on a motor-vehicle.

Validity of license granted in another Province.

10. Petroleum may be transported within the territories administered by the Agent to the Governor-General in Baluchistan as such Agent under cover of a license granted by the prescribed authority in any other province, provided that the conditions of such license are observed throughout the period during which the petroleum is in transit.

CHAPTER V.—FEES.

Method of levying fees.

1. (1) Where the proceeds of fees leviable for licenses under these rules have been assigned by the Local Government to any local authority, the fees shall be levied in such manner as the local authority may from time to time direct.

(2) In all other cases the fees shall be levied by means of impressed stamps.

(3) An application for the grant or the renewal of a license shall bear the proper stamp, and, if it be refused, the value of the separate stamp (if any) which may have been already provided by the applicant for the desired license or renewed license, minus the deductions prescribed by section 54 of the Indian Stamp Act, 1899 (II of 1899), may be refunded to the applicant. An application should not be made on the stamped paper intended for the license or renewed license; but, where this has been wrongly done, the value of the stamp may be refunded minus—

(i) the value of the stamp which should have been affixed to the application, and

(ii) the deductions prescribed as aforesaid.

Fees for licenses for possession of petroleum.

2. The following fees shall be charged for licenses for the possession of petroleum, namely: —

Non-dangerous petroleum.

	R	
(a) When the quantity to be stored, exceeds five hundred but does not exceed one thousand gallons.	12	
(b) When the quantity to be stored exceeds one thousand but does not exceed five thousand gallons.	12	for the first one thousand gallons plus R2 for every additional one thousand gallons or part thereof.
(c) When the quantity to be stored exceeds five thousand gallons, but does not exceed fifty thousand gallons.	20	for the first five thousand gallons plus R4 for every additional one thousand gallons or part thereof.
(d) When the quantity to be stored exceeds fifty thousand gallons	250	

Dangerous petroleum.

	R	
(e) When the quantity to be stored does not exceed forty gallons	3	
(f) When the quantity to be stored exceeds forty gallons, but does not exceed five hundred gallons.	8	
(g) When the quantity to be stored exceeds five hundred gallons.		the same fees as those laid down for non-dangerous petroleum

Fees for licenses for transport of petroleum

3 The following fees shall be charged for licenses for the transport of petroleum.

Non-dangerous petroleum

Special license—

	R
(a) When the quantity to be transported exceeds five hundred but does not exceed five thousand gallons	1
(b) For every additional five thousand gallons or part of five thousand gallons	1
General license for the transport of non-dangerous petroleum by rail or by road, for twelve months	100

Dangerous petroleum

Special license—	R	
(i) When the quantity to be transported does not exceed forty gallons	2	
(ii) When the quantity to be transported exceeds forty gallons, but does not exceed four hundred and eighty gallons	2	for the first forty gallons *plus* 8 annas for every additional forty gallons or part thereof
(iii) When the quantity to be transported exceeds four hundred and eighty gallons	8	for the first four hundred and eighty gallons *plus* R2 for every additional four hundred and eighty gallons or part thereof
General license for the transport of dangerous petroleum by the owner of a motor-vehicle by road or rail up to a maximum of sixty gallons.	5	
General license for the transport of dangerous petroleum by dealers by rail or road	100	

FORM A.

(Rule 2 of Chapter III of Part II)

License to possess petroleum (other than dangerous petroleum), otherwise than in bulk.

No. Fee, Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or authority appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place above referred to)

ENDORSEMENT ON FORM A

CONDITIONS OF THE LICENSE

If the licensing officer call on the holder of a license, by a notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer be necessary for the safety of the place, the holder of the license shall execute the repairs within such period not being less than one week from the date of receipt of the notice, as may be fixed by the notice

2. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors

3 Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building

A combination of these methods is permissible.

4. The following distances shall be kept clear round the building :—

Distances to be kept clear round buildings or enclosure walls.			Number of gallons to be stored.
Not less than	15 feet	over	5,000 and under.
"	20 "	"	5,000 and up to 15,000
"	30 "	"	15,000 " 30,000
"	40 "	"	30,000 " 50,000
"	60 "	"	50,000 " 75,000
"	80 "	"	75,000 " 100,000
"	100 "	"	100,000 " 150,000
"	150 "		Unlimited.

5 No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted within the installation.

FORM B.

(Rule 4 of Chapter III of Part II.)

License to possess dangerous petroleum, otherwise than in bulk, in quantity exceeding forty gallons.

No. Fee, Rs.

License is hereby granted to for the storage, in the place described below, of gallons of dangerous petroleum, subject to the rules for the storage of petroleum, published in Notification No. , dated , and to the further conditions on the back of this license.

First Assistant to the Hon'ble the
Agent to the Governor-General.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM B.

CONDITIONS OF LICENSE.

1. If the licensing officer call upon the holder of a license, by notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of the Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which petroleum must be contained.

3. The petroleum shall be stored in gas-tight tinned or galvanized sheet iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight under-cap. Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch : provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet iron or steel, and have the following thickness of metal :—

(1) When the capacity does not exceed two gallons, not less than 25 B. W. G.
(2) When the capacity exceeds two gallons, but does not exceed four gallons, 22 B. W. G.
(3) When the capacity exceeds four gallons, 16 B. W. G.

4. An air-space of at least one-tenth of its capacity shall be left in each receptacle at the time of filling.

5. The receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be labelled in accordance with the provisions of section 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors

9 Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building.

A combination of these methods is permissible.

10. All ventilating openings in the building shall be protected by strong wire gauze.

11. No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

12. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

13. Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary, and shall prevent any other person from doing such act.

14. The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

15. The following distances shall be kept clear from protected works round the place of storage:—

Quantity to be stored.	Distances to be kept clear when dangerous petroleum is stored in drums of not greater capacity than 4 gallons	Distances to be kept clear when dangerous petroleum is stored in drums of capacity exceeding four gallons but not exceeding ten gallons.
Gallons.	Feet.	Feet.
Not exceeding 1,000.	25	30
From 1,000 to 5,000.	40	50
" 5,000 to 10,000.	60	70
" 10,000 to 15,000.	90	100
" 15,000 to 20,000	130	150
" 20,000 to 30,000	180	200
" 30,000 and over.	200	200

16. Provided that when the quantity to be possessed does not exceed 60 gallons the provisions of conditions 8, 9 and 15 shall not apply, but the licensee shall observe the following conditions.—

(i) The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material, provided however that the doors and windows may be of wood

(ii) Where a store-house forms part of or is attached to another building and when the intervening floor or partition is of an unsubstantial or inflammable character or has openings therein, the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling house or as a place where persons assemble The store house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble

17. The store-house shall be liable to inspection by an officer authorised on this behalf.

FORM C.

(Rule 5 of Chapter III of Part II.)

License to possess dangerous petroleum in quantity not exceeding forty gallons.

No. Fee, Rs. 3

License is hereby granted to for the storage, in the place prescribed below, of gallons of dangerous petroleum, subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or Authority appointed under

ENDORSEMENT ON FORM C.

CONDITIONS OF LICENSE

1. If The licensing officer call upon the holder of a license, by notice in writing, to execute any repair of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of the Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which the petroleum must be contained

3. The petroleum shall be stored in gas-tight tinned or galvanized sheet-iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well-made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight under-cap Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch, provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet-iron or steel, and have the following thickness of metal:—

	Not less than
(1) When the capacity does not exceed two gallons	25 B. W. G.
(2) When the capacity exceeds two gallons, but does not exceed four gallons	22 B. W. G.
(3) When the capacity exceeds four gallons	16 B. W. G.

4. An air-space of at least one-tenth of its capacity shall be left in each receptacle at the time of filling

5. Receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be labelled in accordance with the provisions of section 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material; provided, however, that the doors and windows may be of wood

9. All ventilating openings in the building shall be protected by strong wire gauze.

10. No light except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

11. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

12. Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary and shall prevent any other person from doing such act.

13. The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage, and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

14. Where a store-house forms a part of or is attached to another building, and where the intervening floor or partition is of an unsubstantial or inflammable character or has openings therein, the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling or as a place where persons assemble The store house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble.

15. The store-house shall be liable to inspection by any officer authorised on this behalf.

FORM D.

(Rule 6 of Chapter III of Part II.)

License to possess petroleum in a major installation.

No. Fee, Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

First Assistant to the Hon'ble the Agent
to the Governor General.

ENDORSEMENT ON FORM D.

CONDITIONS OF LICENSE.

1. Each tank shall either be separately surrounded by a wall or embankment of substantial construction, or shall be partially sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than the tank is capable of containing, and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation, and not occupied by the tank, shall be kept entirely clear and unoccupied.

2. All sheds or godowns for the storage of oil in tins, drums or cases shall be surrounded by masonry walls or embankments, or a combination of both, so constructed as to prevent the overflow of any oil that may be stored at any time within such sheds or godowns in case of its escape from the tins, drums or cases in which it is stored. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than such sheds or godowns are licensed to contain.

3. A distance of not less than one hundred feet shall be kept clear between one storage tank and another, and no tank shall be of greater height than thirty-two feet above ground level.

4. A distance of not less than one hundred and fifty feet shall be kept clear between sheds or godowns for the storage of oil otherwise than in bulk and tanks for bulk oil storage, the distance being measured between the nearest points of the perimeters of the tanks or storage buildings, as the case may be.

Proviso.—Provided that where a screen wall intervenes the distance to be kept clear shall be not less than one hundred feet.

5. A distance of not less than one hundred and fifty feet shall be kept clear between any storage tank or building and any protected work.

Proviso.—Provided that, where a screen wall intervenes, the distance to be kept clear shall be not less than one hundred feet.

6. No fire or lights except those necessary for soldering purposes shall be permitted within the installation.

FORM E.

(RULE 7 OF CHAPTER III OF PART II.)

License to possess petroleum in a minor installation.

No. Fee, Rs.

License is hereby granted to for the storage, in the place described below, of gallons of petroleum, subject to the rules for the storage of petroleum, published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or Authority appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place referred to.)

ENDORSEMENT ON FORM E.

CONDITIONS ON LICENSE.

1. Every tank of which the capacity exceeds fifteen thousand gallons shall either be separately surrounded by a wall or embankment of substantial construction, or shall be sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain the total quantity of oil capable of being contained in the tank and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation and not occupied by the tanks, shall be kept entirely clear and unoccupied.

2. The distance to be kept clear between a tank and the walls or embankments which surround it shall be measuring from the ground level—

(a) for horizontal tanks, not less than one-third the height of the tank ;

(b) for perpendicular tanks, not less than one-half the height of the tank.

3. The height of walls or embankments surrounding the installation shall be not less than two feet six inches from the ground level.

4. The following distances shall be kept clear between buildings not forming part of the installation and the enclosure walls or embankments :—

Where the number of gallons stored is.	Distance to be kept clear.
5,000 and under	Not less than 15 feet.
Over 5,000 and up to 15,000	Ditto 20 "
Over 15,000 and up to 30,000	Ditto 30 "
Over 30,000 and up to 50,000	Ditto 40 "

Provided that these distances may be reduced by the Local Government on the recommendation of the Chief Inspector of Explosives in cases where screen walls are provided or other special precautions taken.

5. Not more than four hundred cases of oil in addition to tins and drums shall be stored at any one time in any godown or shed in which the storage of oil in tins or drums is permitted.

6. Soldering shall only be permitted in a separate room or building placed as far from the tanks as can be conveniently arranged, in which no storage or filling shall be permitted. No more tins shall be allowed in the soldering room at any one time than are necessary for expeditious working.

7. No fire or lights, except those necessary in the soldering room and watchman's house, shall be permitted.

8. If the installation contains tanks of which the capacity does not exceed fifteen thousand gallons, either—

(a) each tank shall be separately enclosed in the manner prescribed in condition 1, or

(b) the entire installation shall be surrounded by a masonry wall or embankment or a combination of these forming an enclosure of dimensions sufficient to contain, and prevent the overflow of all the oil that may be stored at any one time within such walls or embankments.

FORM F.

(Rule 8 of Chapter III of Part II.)

License to possess crude petroleum in a place of storage at or near petroleum wells.

No. Fee, Rs.

ENDORSEMENT ON FORM G.

CONDITIONS OF THE LICENSE.

1. The dangerous petroleum shall not be kept, used or transported except in gas-tight tinned or galvanized sheet-iron, steel or lead plate drums or receptacles containing each not more than 4 gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight under cap. Such drums or receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch. Provided that wood cases shall not be necessary when the drums or receptacles are made of tinned or galvanized sheet-iron, or steel, and have the following thickness of metal :—

	Not less than
1. When the capacity does not exceed 2 gallons	25 B. W. G.
2. When the capacity exceeds 2 gallons	22 B W. G

2. The drums or receptacles shall be so substantially constructed and secured as not to be liable except under circumstances of gross negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

3. Every such vessel, not forming part of a motor vehicle, when used for transporting or keeping dangerous petroleum, shall bear the words "Dangerous Petroleum Highly Inflammable" legibly and indelibly stamped or marked thereon, or on a metallic or enamelled label attached thereto.

4. An air-space of at least one-tenth of its capacity shall be left in each drum or receptacle at the time of filling to allow for expansion of the dangerous petroleum

5. Before repairs are done to any such vessel, that vessel shall, as far as practicable, be cleaned by the removal of all dangerous petroleum and of all dangerous vapours derived from the same

6. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable materials, provided, however, that the doors and windows may be of wood.

7. Where a store-house forms part of, or is attached to another building, and when the intervening floor or partition is of an unsubstantial or inflammable character, or has an opening therein, the whole of such building shall be deemed to be the store-house, and no portion of such store-house shall be used as a dwelling or as a place where persons assemble. A store-house shall have a separate entrance from the open air distinct from that of any dwelling or building in which persons assemble.

8. The amount of dangerous petroleum to be kept in any one store-house, whether or not upon motor-vehicles, shall not exceed sixty gallons at any one time.

9. The filling or replenishing of any vessel with dangerous petroleum shall not be carried on, nor shall the contents of any such vessel be exposed, in the presence of fire or artificial light, except a light of such construction. position and character as not to be liable to ignite any inflammable vapour, and no artificial light shall be brought within dangerous proximity of the place where any vessel containing dangerous petroleum is being kept.

10. In the case of all dangerous petroleum kept or transported for the purpose of, or in connection with any motor-vehicle, (*a*) all due precautions shall be taken for the prevention of accidents by fire or explosion and for the prevention of unauthorised persons having access to any dangerous petroleum kept or transported and to the vessels containing, or having actually contained, the same, and (*b*) every person managing or employed on or in connection with any motor vehicle shall abstain from every act whatever which tends to cause fire or explosion, and which is not reasonably necessary, and shall prevent any other person from committing such act.

11. The store-house shall be liable to inspection by an officer authorised in this behalf.

FORM H.

(Rule 1 of Chapter IV of Part II.)

General license to transport petroleum other than dangerous petroleum.

No. Fee, Rs. 100.

A general license is hereby granted to to transport petroleum, other than dangerous petroleum, in bulk / otherwise than in bulk subject to the rules contained in Chapter IV of Part II of Government Notification No. , dated , and to the condition at the back of this license.

This license shall continue in force till the

8. Storage of crude petroleum in bulk.
9. Dangerous petroleum for use on motor-vehicles,
10. Storage by local authority.

CHAPTER IV.—OF LICENSES FOR THE TRANSPORT OF PETROLEUM.

CHAPTER V.—FEES.

DRAFT RULES UNDER SECTION 9 OF THE INDIAN PETROLEUM ACT, 1899, FOR THE IMPORTATION, POSSESSION AND TRANSPORT OF PETROLEUM IN THE TERRITORIES ADMINISTERED BY THE AGENT TO THE GOVERNOR-GENERAL IN BALUCHISTAN.

PART I.

PRELIMINARY.

Definition.

In these rules, —

(a) "Part" means a part of these rules;

(b) "petroleum in bulk" means petroleum in quantities exceeding five hundred gallons, contained in any one receptacle;

(c) "installation" means a place specially prepared for the storage of petroleum;

(d) "major installation" means an installation—

(1) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, exceeding fifty thousand gallons, or

(2) in which tin-making operations are carried on;

(e) "minor installation" means an installation—

(1) capable of containing an amount of oil, whether in bulk only or in combined bulk and non-bulk storage, not exceeding fifty thousand gallons, and

(2) in which no tin-making operations are carried on;

(f) "protected works" includes buildings in which persons dwell or assemble, timber yards, other petroleum stores and any other place which the Local Government may declare as such by Notification;

(g) "motor-vehicles" includes a motor bicycle, and a motor tricycle; and

(h) "owner" as applied to a motor vehicle, includes a person who hires, or is otherwise entitled for the time being to use or work a motor-vehicle.

PART II.

POSSESSION AND TRANSPORT OF PETROLEUM.

CHAPTER I.—POSSESSION OF PETROLEUM.

Smoking prohibited.

1. No smoking shall be permitted inside any installation

Supervision of operations within installation.

2 All operations within any installation shall be conducted under the supervision of a responsible Agent or Supervisor.

Cleanliness of installation.

3 The ground in the interior of an installation shall be kept clean and free from goods of a combustible nature, vegetation and rubbish.

Supply of sand in installation.

4. A sufficient supply of sand shall always be kept in an installation for the purpose of extinguishing fire.

5. All enclosure walls and embankments required to be constructed by or under these rules shall be certified as being sufficient to ensure safety by a Railway Engineer in the case of installations constructed on Railway premises, and in the case of other installations by an Engineer accepted as qualified for this purpose by the Local Government.

Enclosure walls and embankments.

6. The capacity in gallons of every tank and storage shed or godowns in an installation shall be conspicuously marked on it, and shall be calculated as follows:—

Marking of capacity of tanks.

for tanks, at the rate of 6·25 gallons per cubic foot;
for sheds and godowns, at the rate of 10 gallons per 3 cubic feet.

7. Every tank or other receptacle for the storage of petroleum in bulk, except a tank or receptacle which is not of sufficient capacity to contain ten thousand gallons of petroleum and which is so situated as not to be liable to cause danger in the event of the petroleum being ignited, shall be protected by an efficient lightning-conductor.

Protection from lightning.

Explanation.—A tank or receptacle shall be deemed to be so situated as not to be liable to cause danger in the event of the petroleum being ignited, if it is not in close proximity to any other tank or receptacle, or to any building and if it is surrounded by a wall, or moat, or combination of both, sufficient to prevent the flow of petroleum beyond certain circumscribed limits in the event of the escape of the whole contents of the tank when full.

8. Not less than once in every year the licensee of an installation shall test or cause to be tested the efficiency of the conductor in such manner as the authority granting the license may, by general or special order, declare to be sufficient, and a certificate showing the date of the last test shall be posted in a conspicuous place within the installation.

Testing of lightning-conductor by licensee.

9. Any officer appointed by a Local Government in this behalf may enter any installation for the purpose of testing the efficiency of the conductor, at any time after sunrise and before sunset.

Official testing of lightning-conductor.

10. No installation shall be open, and no work in any installation shall be permitted, between sunset and sunrise: provided that in cases where electric lighting is exclusively used, night working may be permitted by the Local Government on the recommendation of the Chief Inspector of Explosives.

Time for work in installations.

11. Where there are any pipes or openings for draining out water in any enclosure wall, arrangements shall be made whereby they can be closed, and they shall only be kept open when actually necessary for drainage purposes. The nature of such arrangements shall be shown in the specifications submitted with the application for a license.

Closure of pipes and openings.

12. All sheds or godowns in an installation for the storage of oil in tins, drums or cases shall be built of uninflammable material.

Materials for sheds and godowns.

13. There shall be hung up in a conspicuous place in every installation for which a license has been granted, copies, in English and the Vernacular, of the rules contained in this Part, and of the conditions endorsed on the license.

Posting up of rules and conditions.

CHAPTER II.—GENERAL PROVISIONS RELATING TO LICENSES.

1. All applications for licenses for the possession or transport of petroleum shall be made to the District Magistrate.

Applications for Licenses.

2. Licenses (*a*) for the possession or transport of dangerous petroleum in quantities not exceeding forty gallons, (*b*) for the possession or transport of petroleum, not being dangerous or crude petroleum nor petroleum in bulk, and (*c*) for the possession of petroleum, in bulk or otherwise, in a minor installation, may be granted by a District Magistrate or by such other authority as the Local Government may, from time to time by order in writing, appoint in this behalf. In all other cases the licensing authority shall be the Local Government.

Licensing authority.

3. The licensing authority may, for reasons to be communicated to the applicant, refuse a license in any case: provided that when a license is refused by any authority other than the Local Government, such refusal shall be reported to the Local Government.

Refusal of license.

4. Every license granted under these rules shall be liable to be forfeited for any contravention of the Act, or of any rule thereunder, or of any condition contained in such license, or for any other reason deemed by the licensing authority to be good and sufficient, and recorded by him in writing.

Forfeiture of license.

5. Every license and pass granted under these rules shall be held subject to the conditions endorsed on it, and shall contain all the particulars required to be entered on it by the form prescribed for it under these rules.

Particulars of license.

6. (1) Every application for the renewal of a license shall be made in the same manner as an application for an original license.

Renewal of licenses.

(2) Every such application shall be made at a date not less than fifteen days before the date on which the original license expires.

(3) The same fee shall be charged for the renewal of a license as for a new license.

7. When any license is granted for the possession or transport of petroleum a copy of the rules contained in Chapter I of this Part in the case of a license for possession, and rule 10 of Chapter IV of this Part in the case of a license for transport, printed in English and the vernacular, shall be given, together with the license, to the licensee.

Supply of rules to licensee.

CHAPTER III.—LICENSES FOR THE POSSESSION OF PETROLEUM.

1. Save as provided in rule 10 of this Chapter, every license for the possession of petroleum shall remain in force until the 31st of December next following the date of issue of the license.

Continuance of license.

2. Licenses for the possession of petroleum, not being dangerous petroleum, otherwise than in bulk, may be granted in Form A.

Petroleum not in bulk, other than dangerous petroleum.

3. (1) The holder of a license in Form A may, at any time before the expiry of the license, apply for permission to transfer his license to another person.

Transfer of certain licenses.

(2) Such application shall be made to the District Magistrate, who shall, if he approves of the transfer, enter upon the license, under his signature, an endorsement to the effect that the license has been transferred to the person named.

(3) A fee of Rs. 5 shall be charged on each such application.

(4) The person to whom the license is so transferred shall enjoy the same powers nd be subject to the same obligations under the license as the original holder.

4 Licenses for the possession of dangerous petroleum not in bulk in quantity exceeding forty gallons may be granted in Form B.

Dangerous petroleum not in bulk.

5. Licenses for the possession of dangerous petroleum in quantity not exceeding forty gallons may be granted in Form C.

Dangerous petroleum not exceeding forty gallons.

6. Licenses for the possession of any stated quantity of petroleum in major installations in accordance with such specifications and plans as may be approved by the Local Government, on the recommendation of the Chief Inspector of Explosives, may be granted in Form D.

Storage in major installations.

7. Licenses for the possession of any stated quantity of petroleum in minor installations in accordance with such specifications and plans as may be approved by the Local Government, on the recommendation of the Chief Inspector of Explosives, may be granted in Form E.

Storage in minor installations.

8. Subject to such conditions as may be prescribed by the Local Government in each case, licenses in Form F may be granted to any person engaged in the extraction of petroleum from wells for the possession of any quantity of crude petroleum in any place of storage at or near such wells.

Storage of crude petroleum in bulk.

9. (1) Licenses in Form G may be granted free of charge for the possession of dangerous petroleum for use on motor-vehicles and for its transport thereon, for the purpose of use therein.

Dangerous petroleum for use on motor-vehicles.

(2) Save in the cases provided for by the conditions of the license, the provisions of the ordinary rules relatin, to the possession of dangerous petroleum shall regulate the possession of dangerous petroleum for use on motor-vehicles.

10. Licenses for the possession of petroleum in an installation may be granted free of charge to any local authority, subject to such conditions and for such period, as the Local Government may direct.

Storage by local authority.

CHAPTER IV.—LICENSES FOR THE TRANSPORT OF PETROLEUM.

General licenses for the transport of non-dangerous petroleum.

1. General licenses for the transport of petroleum, other than dangerous petroleum, may be granted for a period of twelve months in Form H.

General licenses for the transport of dangerous petroleum.

2. General licenses for the transport of dangerous petroleum otherwise than in bulk may be granted for a period of twelve months in Form I.

Effect of general license.

3. Licenses granted under rules 1 and 2 of this Chapter may authorise the holder to transport petroleum without restriction as to destination or total quantity.

Pass for transport of petroleum.

4. The holder of a general license granted under rules 1 or 2 of this Chapter shall, with each consignment of petroleum conveyed under cover of his license, issue to the person who takes charge of the petroleum for the purpose of transporting it a numbered pass in Form J.

Special licenses for the transport of petroleum other than dangerous petroleum.

5. Special licenses may be granted for the transport of petroleum, other than dangerous petroleum, in quantities exceeding five hundred gallons in Form K.

Special licenses for the transport of dangerous petroleum.

6. Special licenses may be granted for the transport of dangerous petroleum other than in bulk in Form L.

Effect of special license.

7. A special license granted under rules 5 and 6 shall only cover the transport of the particular consignment entered in the license.

Particulars to be given in applications for special licenses.

8. Applications for special licenses for the transport of petroleum by rail, or by road or by both, shall specify the description and quantity of petroleum to be transported, and the places from and to which, respectively, the petroleum is to be conveyed, and shall describe the receptacles in which it is to be contained.

Transport of dangerous petroleum by motorists otherwise than on a motor-vehicle.

9. Licenses in Form M to transport dangerous petroleum, otherwise than on a motor-vehicle, may be granted to owners of motor-vehicles holding licenses under rule 9, sub-rule (1), of Chapter III of this Part, to possess petroleum and use or transport it on a motor-vehicle.

Validity of license granted in another Province.

10. Petroleum may be transported within British Baluchistan under cover of a license granted by the prescribed authority in any other province, provided that the conditions of such license are observed throughout the period during which the petroleum is in transit.

CHAPTER V.—FEES.

Method of levying fees.

1. (1) Where the proceeds of fees leviable for licenses under these rules have been assigned by the Local Government to any local authority, the fees shall be levied in such manner as the local authority may from time to time direct.

(2) In all other cases the fees shall be levied by means of impressed stamps.

(3) An application for the grant or the renewal of a license shall bear the proper stamp, and, if it be refused, the value of the separate stamp (if any) which may have been already provided by the applicant for the desired license or renewed license, *minus* the deductions prescribed by section 54 of the Indian Stamp Act, 1899 (II of 1899), may be refunded to the applicant. An application should not be made on the stamped paper intended for the license or renewed license; but, where this has been wrongly done, the value of the stamp may be refunded *minus*—

(*i*) the value of the stamp which should have been affixed to the application, and

(*ii*) the deductions prescribed as aforesaid.

Fees for licenses for possession of petroleum.

2. The following fees shall be charged for licenses for the possession of petroleum namely :—

Non-dangerous Petroleum

	R	
(*a*) When the quantity to be stored exceeds five hundred, but does not exceed one thousand gallons.	12	
(*b*) When the quantity to be stored exceeds one thousand, but does not exceed five thousand gallons.	12	for the first one thousand gallons *plus* R2 for every additional one thousand gallons or part thereof.

	R	
(c) When the quantity to be stored exceeds five thousand gallons, but does not exceed fifty thousand gallons	20	for the first five thousand gallons *plus* R4 for every additional one thousand gallons or part thereof.
(d) When the quantity to be stored exceeds fifty thousand gallons.	250	

Dangerous Petroleum.

	R	
(e) When the quantity to be stored does not exceed forty gallons.	3	
(f) When the quantity to be stored exceeds forty gallons, but does not exceed five hundred gallons	8	
(g) When the quantity to be stored exceeds five hundred gallons		The same fees as those laid down for non-dangerous petroleum.

Fees for licenses for transport of petroleum.

3 The following fees shall be charged for licenses for the transport of petroleum.

Non-dangerous Petroleum.

Special license—

	R
(a) When the quantity to be transported exceeds five hundred, but does not exceed five thousand gallons	1
(b) For every additional five thousand gallons or part of five thousand gallons	1
General license for the transport of non-dangerous petroleum by rail or by road, for twelve months	100

Dangerous Petroleum.

Special license—

	R	
(i) When the quantity to be transported does not exceed forty gallons.	2	
(ii) When the quantity to be transported exceeds forty gallons, but does not exceed four hundred and eighty gallons.	2	for the first forty gallons *plus* 8 annas for every additional forty gallons or part thereof.
(iii) When the quantity to be transported exceeds four hundred and eighty gallons.	8	for the first four hundred and eighty gallons *plus* R2 for every additional four hundred and eighty gallons or part thereof.
General license for the transport of dangerous petroleum by the owner of a motor-vehicle by road or rail up to a maximum of sixty gallons.	5	
General license for the transport of dangerous petroleum by dealers by rail or road.	100	

FORM A.

(Rule 2 of Chapter III of Part II.)

License to possess petroleum (other than dangerous petroleum) otherwise than in bulk.

No. Fee , Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. dated , and to the further conditions on the back of this license.

District Magistrate or Authority
appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM A.

CONDITIONS OF THE LICENSE.

If the licensing officer call on the holder of a license, by a notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors.

3. Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building.

A combination of these methods is permissible.

4. The following distances shall be kept clear round the building :—

Distances to be kept clear round buildings or enclosure walls.	Number of gallons to be stored.
Not less than 15 feet	5,000 and under.
" 20 "	Over 5,000 and up to 15,000
" 30 "	" 15,000 " 30,000
" 40 "	" 30,000 " 50,000
" 60 "	" 50,000 " 75,000
" 80 "	" 75,000 " 100,000
" 100 "	100,000 " 150,000
" 150 "	Unlimited.

5. No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted within the installation.

FORM B.

(Rule 4 of Chapter III of Part II.)

License to possess dangerous petroleum, otherwise than in bulk, in quantity exceeding forty gallons.

No. Fee, Rs.

License is hereby granted to for the storage, in the place described below, of gallons of dangerous petroleum subject to the rules for the storage of petroleum, published in Notification No. , dated and to the further conditions on the back of this license.

Secretary to the Hon'ble the Chief Commissioner.

The 190 .

(Description of the place above referred to).

ENDORSEMENT ON FORM B.

CONDITIONS OF LICENSE.

1. If the licensing officer call upon the holder of a license, by notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the holder of the license shall execute the repairs within such period not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which petroleum must be contained.

The petroleum shall be stored in gas-tight tinned or galvanized sheet iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight under-cap. Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch : provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet iron or steel, and have the following thickness of metal :—

	Not less than
(1) When the capacity does not exceed two gallons	25 B. W. G.
(2) When the capacity exceeds two gallons but does not exceed four gallons	22 B. W. G.
(3) When the capacity exceeds 4 gallons	16 B. W. G.

4. An air space of at least one-tenth of its capacity shall be left in each receptacle at the time of filling.

5. The receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be labelled in accordance with the provisions of sections 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The building shall be constructed of masonry or other uninflammable material with terraced, tiled or iron roofs and with tiled or paved or earthen floors.

9. Either the doorways and other openings of the building shall be built up to such a height above the level of the road or street, or the floor sunk to such a depth below the level of the road or street, that the petroleum cannot flow out from the building in case of its escape from the receptacle in which it is contained, or the building itself shall be surrounded with a masonry wall or embankment or both sufficiently high to contain all the petroleum in case of its escape from the building.

A combination of these methods is permissible.

10. All ventilating openings in the building shall be protected by strong wire gauze.

11. No light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

12. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

13. Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary, and shall prevent any other person from doing such act.

14. The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage, and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

15. The following distances shall be kept clear from protected works round the place of storage:—

Quantity to be stored.	Distances to be kept clear when dangerous petroleum is stored in drums of not greater capacity than four gallons.	Distances to be kept clear when dangerous petroleum is stored in drums of capacity exceeding four gallons but not exceeding ten gallons.
Not exceeding 1,000 gallons	25 Feet.	30 Feet.
From 1,000 to 5,000 „	40 „	50 „
„ 5,000 to 10,000 „	60 „	70 „
„ 10,000 to 15,000 „	90 „	100 „
„ 15,000 to 20,000 „	130 „	150 „
„ 20,000 to 30,000 „	180 „	200 „
„ 30,000 and over „	200 „	200 „

16. Provided that when the quantity to be possessed does not exceed 60 gallons the provisions of conditions 8, 9 and 15 shall not apply, but the licensee shall observe the following conditions:—

(i) The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material, provided, however, that the doors and windows may be of wood.

(ii) Where a store-house forms part of or is attached to another building and when the intervening floor or partition is of an unsubstantial or inflammable character or has opening therein, the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling house or as a place where persons assemble. The store-house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble.

17. The store-house shall be liable to inspection by an officer authorised on this behalf.

FORM C.

(Rule 5 of Chapter III of Part II.)

License to possess dangerous petroleum in quantity not exceeding forty gallons.

No. Fee, Rs. 3.

License is hereby granted to for the storage, in the place prescribed below, of gallons of dangerous petroleum, subject to the rules for the storage of petroleum published in Notification No. , dated and to the further conditions on the back of this license.

District Magistrate or Authority appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM C.

CONDITIONS OF LICENSE.

1. If the licensing officer call upon the holder of a license, by notice in writing, to execute any repairs of the licensed place, which may, in the opinion of such officer, be necessary for the safety of the place, the

holder of the license shall execute the repairs within such period, not being less than one week from the date of receipt of the notice, as may be fixed by the notice.

2. The license-holder is prohibited from delivering any quantity of dangerous petroleum exceeding three gallons to any one who has not a license under section 5 or section 6 of the Act, or any less quantity of such petroleum, except in accordance with the conditions of the proviso to section 6 of the Act, as to the vessels in which the petroleum must be contained.

3. The petroleum shall be stored in gas-tight tinned or galvanized sheet-iron, steel or lead plate receptacles containing each not more than ten gallons and fitted with well made filling holes and well fitting screw plugs or fitted with screw cap with metal air-tight undercap. Such receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch ; provided that wood cases shall not be necessary when the receptacles are made of tinned or galvanized sheet-iron or steel, and have the following thickness of metal :—

(1) When the capacity does not exceed two gallons . . . . Not less than 25 B. W. G.
(2) When the capacity exceeds two gallons but does not exceed four gallons „ 22 B. W. G.
(3) When the capacity exceeds four gallons . . . . „ 16 B. W. G.

4. An air space of at least one-tenth of its capacity shall be left in each receptacle at the time of filling.

5. Receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of grave negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

6. The receptacles shall be lebelled in accordance with the provisions of section 7 of the Act.

7. Any receptacle, before being repaired, shall be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

8. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable material, provided, however, that the doors and windows may be of wood.

9. All ventilating openings in the building shall be protected by strong wire gauze.

10. No light except a light of such strength, position and character as is not liable to ignite any inflammable vapour, or fire of any description, shall be permitted at any time within the installation.

11. All due precautions shall be taken for the prevention of unauthorised persons having access to any dangerous petroleum kept and to the vessels containing or having actually contained the same.

12. Every person managing or employed on or in connection with the place of storage shall abstain from any act whatever which tends to cause fire or explosion and which is not reasonably necessary and shall prevent any other person from doing such act.

13. The drum or other receptacle containing dangerous petroleum shall only be opened on the licensed premises at or immediately adjoining the place of storage, and for the time necessary for drawing off the petroleum and during such drawing off every reasonable precaution shall be adopted for preventing the escape of dangerous petroleum or the vapour therefrom.

14. Where a store-house forms a part of or is attached to another building, and where the intervening floor or partition is of an unsubstantial or inflammable character or has openings therein, the whole of such building shall be deemed to be the store-house and no portion of such store-house shall be used as a dwelling house or as a place where persons assemble. The store-house shall have a separate entrance from the open air distinct from any building or dwelling in which persons assemble.

15. The store-house shall be liable to inspection by any officer authorised on this behalf.

FORM D.

(Rule 6 of Chapter III of Part II.)

License to possess petroleum in a major installation.

No. Fee, Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

Secretary to the Hon'ble the Chief Commissioner.

The 190 .

(Description of the place above referred to.)

ENDORSEMENT ON FORM D.

CONDITIONS OF LICENSE.

1. Each tank shall either be separately surrounded by a wall or embankment of substantial construction, or shall be partially sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than the tank is capable of containing, and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation, and not occupied by the tank, shall be kept entirely clear and unoccupied.

2. All sheds or godowns for the storage of oil in tins, drums or cases shall be surrounded by masonry walls or embankments, or a combination of both, so constructed as to prevent the overflow of any oil that may be stored at any time within such sheds or godowns in case of its escape from the tins, drums or cases in which it is stored. The enclosure thus formed shall be of dimensions sufficient to contain 10 per cent. more oil than such sheds or godowns are licensed to contain.

3. A distance of not less than one hundred feet shall be kept clear between one storage tank and another, and no tank shall be of greater height than thirty-two feet above ground level.

4. A distance of not less than one hundred and fifty feet shall be kept clear between sheds or godowns for the storage of oil otherwise than in bulk and tanks for bulk oil storage, the distance being measured between the nearest points of the perimeters of the tanks or storage buildings, as the case may be.

Proviso.—Provided that where a screen wall intervenes, the distance to be kept clear shall be not less than one hundred feet.

5. A distance of not less than one hundred and fifty feet shall be kept clear between any storage tank or building and any protected work.

Proviso.—Provided that where a screen wall intervenes, the distance to be kept clear shall be not less than one hundred feet.

6. No fire or lights, except those necessary for soldering purposes, shall be permitted within the installation.

FORM E.

(Rule 7 of Chapter III of Part II.)

License to possess petroleum in a minor installation.

No. Fee, Rs.

License is hereby granted to for the storage in the place described below, of gallons of petroleum, subject to the rules for the storage of petroleum published in Notification No. , dated , and to the further conditions on the back of this license.

District Magistrate or Authority appointed under rule 2 of Chapter II of Part II.

The 190 .

(Description of the place referred to)

ENDORSEMENT ON FORM E.

CONDITIONS OF LICENSE.

1. Every tank of which the capacity exceeds fifteen thousand gallons shall either be separately surrounded by a wall or embankment of substantial construction, or shall be sunk in an excavation. The enclosure thus formed shall be of dimensions sufficient to contain the total quantity of oil capable of being contained in the tank and shall be so constructed as to prevent the escape therefrom of any oil in the form of liquid, whether under the action of fire or otherwise. The space enclosed by such wall or excavation, and not occupied by the tanks, shall be kept entirely clear and unoccupied.

2. The distance to be kept clear between a tank and the walls or embankments which surround it shall be, measuring from the ground level,—

(*a*) for horizontal tanks, not less than one-third the height of the tank;

(*b*) for perpendicular tanks, not less than one-half the height of the tank.

3. The height of walls or embankments surrounding the installation shall be not less than two feet six inches from the ground level.

4. The following distances shall be kept clear between buildings not forming part of the installation and the enclosure walls or embankments :—

Where the number of gallons stored is	Distance to be kept clear.
5,000 and under	Not less than 15 feet.
Over 5,000 and up to 15,000	Ditto 20 „
Over 15,000 and up to 30,000	Ditto 30 „
Over 30,000 and up to 50,000	Ditto 40 „

Provided that these distances may be reduced by the Local Government on the recommendation of the Chief Inspector of Explosives in cases where screen walls are provided or other special precautions taken.

5. Not more than four hundred cases of oil in addition to tins and drums shall be stored at any one time in any godown or shed in which the storage of oil in tins or drums is permitted.

6. Soldering shall only be permitted in a separate room or building placed as far from the tanks as can be conveniently arranged, in which no storage or filling shall be permitted. No more tins shall be allowed in the soldering room at any one time than are necessary for expeditious working.

7. No fire or lights, except those necessary in the soldering room and watchman's house, shall be permitted.

8. If the installation contains tanks of which the capacity does not exceed fifteen thousand gallons either—

(*a*) each tank shall be separately enclosed in the manner prescribed in condition 1, or

(*b*) the entire installation shall be surrounded by a masonry wall or embankment or a combination of these forming an enclosure of dimensions sufficient to contain, and prevent the overflow of, all the oil that may be stored at any one time within such walls or embankments.

FORM F.

(Rule 8 of Chapter III of Part II.)

License to possess crude petroleum in a place of storage at or near petroleum wells.

No. Fee, Rs.

License is hereby granted to for the storage of gallons of petroleum in the place described below, subject to the conditions at the back of this license.

Secretary to the Hon'ble the Chief Commissioner.

ENDORSEMENT ON FORM G.

CONDITIONS OF THE LICENSE.

1. The dangerous petroleum shall not be kept, used or transported except in gas-tight tinned or galvanized sheet iron, steel or lead plate drums or receptacles containing each not more than 4 gallons and fitted with well-made filling holes and well-fitting screw plugs or fitted with screw cap with metal air-tight under-cap. Such drums or receptacles shall be packed in strong wooden cases, the thickness of the wood to be not less than half an inch Provided that wood cases shall not be necessary when the drums or receptacles are made of tinned or galvanized sheet iron, or steel, and have the following thickness of metal —

	Not less than
(1) When the capacity does not exceed 2 gallons	25 B. W. G.
(2) When the capacity exceeds 2 gallons	22 B. W. G.

2. The drums or receptacles shall be so substantially constructed and secured as not to be liable, except under circumstances of gross negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

3. Every such vessel, not forming part of a motor-vehicle when used for transporting or keeping dangerous petroleum, shall bear the words "Dangerous Petroleum, Highly Inflammable" legibly and indelibly stamped or marked thereon, or on a metallic or enamelled label attached thereto.

4. An air-space of at least one-tenth of its capacity shall be left in each drum or receptacle at the time of filling to allow for expansion of the dangerous petroleum.

5. Before repairs are done to any such vessel that vessel shall, as far as practicable, be cleaned by the removal of all dangerous petroleum and of all dangerous vapours derived from the same.

6. The store-house or building in which the dangerous petroleum is stored shall be well ventilated and constructed of uninflammable materials, provided, however, that the doors and windows may be of wood.

7. Where a store-house forms part of, or is attached to another building and when the intervening, floor or partition is of an unsubstantial or inflammable character, or has an opening therein, the whole of such building shall be deemed to be the store-house, and no portion of such store-house shall be used as a dwelling or as a place where persons assemble. A store-house shall have a separate entrance from the open air distinct from that of any dwelling or building in which persons assemble.

8. The amount of dangerous petroleum to be kept in any one store-house, whether or not upon motor-vehicles, shall not exceed sixty gallons at any one time.

9. The filling or replenishing of any vessel with dangerous petroleum shall not be carried on, nor shall the contents of any such vessel be exposed, in the presence of fire or artificial light, except a light of such construction, position and character as not to be liable to ignite any inflammable vapour, and no artificial light shall be brought within dangerous proximity of the place where any vessel containing dangerous petroleum is being kept.

10. In the case of all dangerous petroleum kept or transported for the purpose of, or in connection with any motor-vehicle, (*a*) all due precautions shall be taken for the prevention of accidents by fire or explosion and for the prevention of unauthorised persons having access to any dangerous petroleum kept or transported, and to the vessels containing, or having actually contained, the same, and (*b*) every person managing or employed on or in connection with any motor-vehicle shall abstain from every act whatever which tends to cause fire or explosion, and which is not reasonably necessary, and shall prevent any other person from committing such act.

11. The store-house shall be liable to inspection by an officer authorised in this behalf.

FORM H.

(Rule 1 of Chapter IV of Part II.)

General license to transport petroleum other than dangerous petroleum.

NOTE.—(1) In English and Vernacular Offices when there are no arrears of work the last Saturday in every month may be observed as a holiday.

(2) The last day of every month will be observed as a holiday in the Treasury Office, Ajmer, instead of the last Saturday

(3) Mohamedan holidays depend on the moon being visible and fall on the day following such event.

(4) With regard to Hindu holidays on account of eclipses of the sun and the moon those for the former are granted for the day on which the eclipse occurs and those for the latter for the day following.

In 1907 there will be one solar eclipse on Monday, the 14th January 1907, and one lunar eclipse on Tuesday the 29th January 1907, and the holidays will be observed on Monday the 14th and Wednesday the 30th January 1907 respectively.

(5) Local holidays may be granted for great festivals or fairs at the discretion of the Commissioner when there are no arrears of work.

(6) The Civil Court vacations commence on the 1st of August 1907 and end on 30th September 1907.

No fresh suits shall during that time be instituted unless they be of an urgent character but the Court will be open for the purpose of clearing up cases instituted before the 15th July and for the disposal of any urgent work.

No. 1496-C.—Under section 25 of the Negotiable Instruments Act, XXVI of 1881, the Honourable the Chief Commissioner of Ajmer-Merwara is pleased to declare the following holidays to be public holidays during the year 1907 :—

Classification of holidays.	Names of holidays.	Dates.	Days of week.	Number of days.

NOTIFICATION.

Simla, the 20th December 1906.

No. 52.—No. 1279, 1st class Hospital Assistant O. Kunhi Raman, Indian Subordinate Medical Department, Madras, attached to the Medical Store Depôt, Rangoon, is granted 30 days' privilege leave, with effect from the 7th December 1906.

E. ROBERTS, M.B., Major, I.M.S.,

for Director-General, Indian Medical Service.

POST OFFICE.

NOTIFICATION.

Calcutta, the 27th December 1906.

No. 1759-*Ap.*—Mr. S. C. W. Rose, superintendent of post offices, 3rd grade, is granted privilege leave for 2 months and 19 days combined with leave on private affairs for 3 months and 12 days, with effect from the 15th October 1906.

C. STEWART-WILSON,
Director General of the Post Office of India.

POSTAL NOTICE.

POSTAL ARRANGEMENTS FOR TROOPS ATTENDING THE AMIR'S CONCENTRATION.

The following Notice is issued as to the conditions under which postal articles may be sent to and from the camp post offices opened to serve the troops during the Concentration at Agra in January 1907.

ARTICLES FOR CAMP POST OFFICES

Mode of addressing postal articles

Articles posted for delivery from camp post offices should be addressed as follows :—

X Y.,
(Regiment, Battery, Staff Appointment, Brigade or Department),
AMIR'S CONCENTRATION

No post-town should be added to the address, and special care should be taken to specify clearly in each case the Regiment, Battery, Staff Appointment, Brigade, or Department of the person addressed.

What may be sent

All classes of postal articles (private and official), *viz.*, letters, postcards, newspapers, packets, and parcels, whether registered, unregistered, value-payable, or insured, may be posted for delivery from camp post offices. Money orders also may be sent, but no savings bank business will be transacted.

Delivery.

Unregistered articles of the letter mail will be delivered through orderlies. Registered articles of the letter mail and registered and unregistered parcels will also be delivered through orderlies in the absence of written instructions to the contrary from the addressees. The receipt of the orderly or other person to whom a registered article or parcel is delivered will be taken on the usual parcel receipt form. Intimation of the arrival of insured and value-payable articles and money orders will be given, through orderlies, to addressees and payees who are advised either to call at the camp post office concerned in person, or to authorise the orderlies, in writing, to take delivery of these articles and to pay any postal charges that may be due on them, or to receive payment of money orders.

N.B.—Any person who does not wish his registered articles or parcels delivered through an orderly must give notice, in writing, to the camp post office by which he is served.

ARTICLES FROM CAMP POST OFFICES.

What may be sent.

All classes of postal articles (private and official) may be posted at camp post offices. Money orders also may be sent, but no savings bank business will be transacted.

Postage stamps.

Postage stamps (including postcards and embossed envelopes, other than one-anna soldiers' envelopes), both ordinary and service, can be purchased at any camp post office.

C. STEWART-WILSON,
Director-General of the Post Office of India.

* Agents for sale of the Legislative Department publications

NOTICE.—Books and Acts required for private use only can be purchased. Applications should be accompanied by a remittance, unless it is wished that the books should be sent by value-payable post, in which case, besides the ordinary postage, an additional charge is made for registration and commission.

Books and Acts required for the public service should be obtained through Local Governments to whom the applicant is subordinate.

Application for Government publications which are no longer in print should be made to the Agent to the particular Government under whose orders they were originally issued.

[The amounts within parentheses are for packing and postage.]

PROMISSORY NOTE.

Stolen.

The Government Promissory Notes as detailed below, for R40,000, originally standing in my name (with the exception of Note No. 123070 of 1865, for R500, which was originally issued in the name of Mr H. E. Teixeira, by whom it was endorsed to me) and never endorsed to any other person, having been stolen, notice is hereby given that payment of the undermentioned Notes and the interest thereon have been stopped at the Public Debt Office, Bank of Bengal, Calcutta, and that application is about to be made for issue of duplicates in my favour. The public are cautioned against purchasing or otherwise dealing with the undermentioned securities:—

3½% loan of 1865, Nos M016442 and 43 and 121533 for R1,000 each, M014555, 123070, M012343, M013638 and 39, M008240 to 42, M015898 for R500 each; 3½% loan of 1854-55, Nos. 091990 for R3,000, M008333, M011296 to 99 for R500 each; M011300 to 302 for R1,000 each; 056020, 079041 for R2,500 each; M008334 for R1,000; 3½% loan of 1879, Nos. M003823 for R1,000 and 016994 for R4,200, 3½% loan of 1842-43, Nos 099710 for R2,600; M006138 for R200, M004030, M005580 to 83 for R500 each; M003357 for R1,000; M004551 for R5,000, and 065573 for R1,500.

R WILKINS—Holder.

December, 1906.

Lost.

The lower half of the Government Promissory Note No. 011265, the 3½ per cent. loan of 1879 for R500, originally standing in the name of the Delhi and London Bank, Limited, and last endorsed to Feroze Pestonji Saklatwala, the proprietor, by whom it was never endorsed to any other person, having been lost, notice is hereby given that payment of the above Note and the interest thereupon have been stopped at Public Debt Office, Bank of Bengal, Calcutta, and that application is about to be made for the issue of duplicate in favour of the proprietor. The public are cautioned against purchasing or dealing with the abovementioned security.

Name of Advertiser—FEROZE PESTONJI SAKLATWALA.
Residence—Suddar Bazar, Peshawar.

Estate J. H. Temple, deceased.

PURSUANT TO SECTION 42, ACT 28 OF 1866.

Notice is hereby given that all persons having claims against the late James Herbert Temple, of the Indian Civil Service, who died at Darjeeling on 23rd May 1906, Letters of Administration to whose Estate have been granted to James Edmund Vallance Esq., Accountant of Messrs. Grindlay & Co., Calcutta, are required to send in the same on or before 21st January next to the said Messrs. Grindlay & Co., Calcutta, after which date the said Administrator will proceed to administer the assets having regard only to the claims of which he shall then have received notice, and no claims sent in subsequently will be recognized, and all persons indebted to or holding any securities or property belonging to the said Estate are also hereby requested to pay without delay the amount owing by them, or deliver the said securities or property to the said Administrator whose receipt alone is valid for the same.

J. E. VALLANCE,
Administrator to Estate
J. H. Temple, deceased.

CALCUTTA;
14th December 1906.

IN THE COURT OF THE MUNSIFF OF MIRZAPUR.

Present:

MR. BEHARI LAL MERH, BAR.-AT-LAW, MUNSIFF.

NOTICE UNDER SECTION 206, CIVIL PROCEDURE CODE.

MISCELLANEOUS NO. 321 OF 1906.

SUIT NO. 487 OF 1904.

The Collector of Mirzapur as Manager of the Court of Wards, Kantit Estate . . . . *Plaintiff*,

versus

(1) Ram Sunder, and (2) Mussammat Mahrani, wife of Ramautar, sons of Payag Dube, (3) Bansgopal, minor son of Ram Kumar Dube, under the guardianship of Ram Sunder, (4) Sheokumar Dube, son of Mata Dayal, and (5) Sitla Pershad, son of Mata Dayal Dube, residents, village Gangapur Tappa Chanwa, Pargana Kantit, District Mirzapur *Defendants*.

Whereas the applicant has filed an application in this Court for the amendment of the decree under section 206, Civil Procedure Code, you are hereby summoned to appear before this Court on the 5th January 1907 to show cause either in person or through a Pleader as regards the amendment prayed for.

Given under my hand and seal of the Court, dated the 7th December 1906.

BEHARI LAL MERH,
Munsiff.

UNCOVENANTED SERVICE FAMILY PENSION FUND.

NOTICE.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law or which it has been customary to publish in the* CALCUTTA GAZETTE *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Rainfall Summary for the seven days ending at 8 h., on Thursday, the 27th December 1906, based on the Indian Daily Weather Reports of the period.

Dry weather prevailed throughout the week in northern India and Burma, and a cool wave passed from the north-west frontier eastwards to Bihar and Chota Nagpur. In the Peninsula the weather was influenced by abnormal conditions prevailing in the south of the Bay, and light to moderate rain fell in Madras chiefly in the Coromandel coast districts.

Burma.—Skies were lightly to moderately clouded during the week, but no rain fell. Temperature was nearly normal on the first three days, and in moderate to large excess during the rest of the week; the excess was much greater in night temperature than by day.

North-east India and Orissa.—Weather was dry throughout, no rainfall having been reported from any of the recording stations. The distribution of temperature was characterised by much irregularity; thus, while temperature was approximately normal throughout the week in the eastern half of the division, it was high in Chota Nagpur and Orissa until the 24th when a cool wave from the west reached the former area and extended over Orissa and Bihar during the next two days.

The United Provinces, Central India and the Central Provinces.—Dry weather prevailed uninterruptedly except at a few stations in Berar where one or two falls of rain occurred on the 22nd and 23rd. Temperature was high at the opening of the week over the whole division, but under the influence of a cool wave from the west, fell rapidly

in the United Provinces and Central India during the next three days, and was below normal during the remainder of the week. In the Central Provinces temperature during the early days of the week was unusually high, particularly at night, but during the last two days a rapid reduction occurred due to an extension southwards from Central India of the influence of the cool wave.

North-west India.—Weather was dry over the whole of the division with the exception of Kashmir where light precipitation occurred on the 21st. A cool wave of feeble intensity affected the greater part of the area during the first five days, but on the 26th and 27th there was a rapid recovery with the result that nearly normal conditions had been reestablished by the close of the week.

The Peninsula.—Weather was feebly disturbed in Madras on the 21st and 22nd, and again on the 26th and 27th when light to heavy rain fell chiefly in the Coromandel coast districts. A few local falls were received also in the west Deccan on the 23rd. As might be expected, temperature was very unsteady, the only important feature being a moderately large excess in the west Deccan throughout the period.

The rainfall of the period from the 4th November to the 27th December was equal to or in excess of the normal in the Frontier Province, the Punjab, Rajputana and the west of the United Provinces, and was in defect in the rest of northern India and in Burma. In the Peninsula it differed most largely from the normal in Madras where it was in moderate to considerable excess. in the south of the East Coast it exceeded the normal fall by 4.68".

The following summarises the chief rainfall amounts of the week, as reported at 8 h each day.

December 21st, Murree 0·55", Hanumkonda 0·55", Masulipatam 1·12" and Kodaikanal 1·07"

" 22nd, Belgaum 0·50."

" 23rd, Akola 0·47", Ahmednagar 1·55" and Aurangabad 0·70".

" 26th, Negapatam 0·76"

" 27th, Nellore 1·63", Madras 1·56", Cuddalore 3·92" and Negapatam 3·07".

E. D. MACLAGAN,
Offg. Secretary to the Government of India.

SIMLA;
The 27th December 1906.

GOVERNMENT OF INDIA,

DEPARTMENT OF REVENUE AND AGRICULTURE.

Season and Crop Prospects for the week ending Saturday, 22nd December 1906.

Burma.—No rain fell during the week. Reaping of early wet weather paddy has been completed in Sandoway, Tavoy and Shwebo. Reaping of late wet weather paddy has commenced in Akyab, Kyaukpyu, Sandoway, Shwebo and Meiktila and has been completed in the Southern Shan States. Reaping now is practically general. Threshing of paddy has commenced in the Northern Shan States, and continues in Pegu and Henzada. The transplanting of dry weather paddy has commenced in the Thabeitkyin sub-division of the Ruby Mines District. The sowing of dry weather paddy and of wheat and gram has been completed in the Singaing township of Kyaukse. The sowing of tobacco and cultivation of miscellaneous crops continue. Slight damage by insects has been done to the late wet weather paddy crops in the Wuntho sub-division of Katha and to sesamum and gram crops in the Inlya village of Kyaukse. The standing cold weather crops in the Chin Hills are suffering for want of rain. The outturn of crops is more or less affected owing to partial drought in parts of Sagaing, Pakokku, Mandalay, Minbu, Meiktila and Yamethin. The prospects of the harvest on the whole are favourable. Price of paddy has risen considerably in Akyab and slightly in Prome and Henzada; it has fallen very largely in Pyapon and Minbu, and considerably in Mandalay and Shwebo; elsewhere it is stationary.

Eastern Bengal and Assam.—The weather is seasonable. No rain fell during the week. The plucking and manufacture of tea continue. The tea season is practically closed; the outturn is good in Nowgong and fair in Darrang. Ploughing for and sowing of mustard and pulses; plucking of cotton; and harvesting of winter rice are in progress. Insects are still causing damage to the mustard crop in parts of Kamrup. The prospects of cotton are bad in the Khasi and Jaintia Hills and good in Sylhet. The prospects of winter rice and other standing crops are moderate. Prices of common rice:—Manipur 19; Kohima 10; Rangamati and Silchar 9½; Bogra and Silchar 9; Faridpur 7 to 9; Dinajpur 8¾; Tezpur and Dibrugarh 8½; Mymensingh, Barisal, Chittagong, Comilla, Malda, Sylhet and Gauhati 8; Noakhali 7 to 8; Dacca 7¾; Jalpaiguri and Dhubri 7½; Pabna 7¼; Rampur Boalia and Nowgong 7; Tura 6½ to 7; Shillong 6½; and Rangpur and Aijal 6 seers per rupee. Prices have risen in six; fallen in four; and have remained stationary in the remaining districts. Five persons are employed on test work in Dacca and four hundred and fifty-six persons received gratuitous relief in Sylhet. Prices are daily falling and the condition of the people is improving with the new crop now on the market.

Bengal.—There was no rain in the Province during the week. Harvesting of winter rice is still going on. Pressing of sugarcane continues in Bihar and Orissa. Spring crops are doing well, but rain is still wanted for them in many districts of Bihar. A flight of locusts passed through Balasore. The number of persons receiving gratuitous relief is—Muzaffarpur 1,118, Darbhanga 19,098. The number of persons on test works is—Muzaffarpur 313, Darbhanga 752. The number on relief works in Darbhanga is 34,559. Fodder and water are sufficient. The price of common rice has risen in three and fallen in seven districts.

United Provinces.—Rain has fallen in the Himalayan, Western and Central Submontane and North Central districts and in those comprising the Upper and Central Doabs, the only exceptions being Etawah, Sitapur and Bahraich. There was no rain elsewhere. Prospects are favourable. Irrigation continues where practicable. Except in Garhwal and Almorah the condition of cattle is good. Supplies are adequate, but fodder continues scarce in Sitapur and Rae-Bareli and in parts of the Rampur State. Prices remain generally stationary.

The weekly report on the scarcity is as follows:—No change in agricultural conditions is reported from the Gorakhpur district. Spring crops continue to be irrigated. Supplies are adequate. Fodder is sufficient and prices are stationary. The numbers on relief are—on works 1,185, on gratuitous relief 1,082, in poor-houses 297, total 2,564.

Punjab.—Rain has fallen in all districts except Shahpur and Lyallpur; it was good in Sialkot; moderate in Jullundur, Rawalpindi, and Mianwali; and slight elsewhere. There are slight fluctuations in the prices of food grains; wheat is rising in Sialkot and falling in Ambala and Shahpur. Cotton picking, sugarcane pressing, and spring sowings continue in several districts. The condition and prospects of the standing crops are

good; rain is needed for unirrigated crops in Hissar, Rohtak and Shahpur. The opium crop is average in Lahore. The yield of cotton is poor in Multan and average in other districts. Locusts have slightly damaged the standing crops in Rohtak and Multan. Locusts appeared also in parts of Jullundur and Amritsar but did no damage. Cattle are generally in good condition. Fodder is sufficient. There are no complaints regarding the water supply.

North-West Frontier Province.—Rain averaging from 16 cents to one inch and three cents fell all over the Province during the week. The water-supply is ample; the Kilapani supply in Dera Ismail Khan is average. The rain was most beneficial to the standing crops. Wheat sowings are in progress. The harvesting of autumn crops continues; the outturn is average. Fodder is sufficient. The condition of cattle is generally good. The turnip crop has been slightly damaged by insects in Dera Ismail Khan. Prices:—wheat $14\frac{1}{16}$ to $18\frac{1}{2}$; gram $17\frac{1}{16}$ to 22; maize 15 to 28, bajra $18\frac{1}{16}$ to 20 seers per rupee.

Jammu.—There was good rain during the week. Prices are fluctuating. Prices:—wheat from 11 to 20 and maize 14 to 35 seers per rupee. The condition of the standing crops is good. Fodder is sufficient except in Kishtwar where it is scarce. The rain has been beneficial to spring sowings which are in progress.

Kashmir.—The weather was generally bright with one day of slight rain and snow; the weather has become very cold. Prices are stationary.

Rajputana.—There were showers during the week in Marwar, Bundi, Tonk, Jaipur, Kishengarh, Alwar, Bharatpur, Ajmer and Merwara; the maximum fall was seventy-five cents in Kishengarh. Agricultural operations are satisfactory and prospects are generally satisfactory. Slight damage to crops has occurred in places in Kishengarh due to the recent rains. Pasturage or fodder is sufficient. Prices are nearly steady throughout, though are still high in places.

Central India.—There was no rain during the week. Autumn harvesting and picking of cotton are in progress. The standing crops and probable outturn are good. Pasturage is good and sufficient. Prices are high in Gwalior and Baghelkhand; are falling in Bundelkhand; and are steady elsewhere. Opium sowing is in progress.

Central Provinces.—Chhindwara and Akola received over $\frac{1}{2}$ an inch of rain and light showers have improved the prospects in the Katol tahsil of Nagpur and in Chanda. Spring sowings are completed. Threshing, winnowing, and picking of cotton are in full swing. Slight damage to crops by cloudy weather is reported from Hoshangabad, Wardha, parts of Nagpur, Chanda, Balaghat, and Drug; otherwise the standing crops are generally in good condition. Fodder and water are ample everywhere. The price of juar has risen in Narsinghpur and Yeotmal, but wheat is cheaper in Saugor, Mandla, Drug and Buldana; elsewhere prices are steady but are still equal to the scarcity level in Wardha, Nagpur, Balaghat and Bilaspur and exceed it in Chanda.

Bombay.—There was slight rain during the week in parts of Karachi, East Khandesh, Ahmednagar, Satara, Sholapur, Belgaum, Palanpur and Cutch; moderate in Kanara, Poona, and Kolhapur; and good in Dharwar. The standing crops are withering for want of sufficient moisture in parts of the Deccan, Bijapur and Kolhapur. Slight damage has been done to crops by locusts in parts of Karachi, Hyderabad, Thar and Parkar and Satara; by insects in parts of the Upper Sindh Frontier and Thar and Parkar, and by unfavourable winds in Palanpur. Crops are generally in good condition elsewhere. Harvesting of autumn crops is nearly completed and threshing continues. Spring sowings are nearing completion. Cotton picking continues in Sindh, the Deccan and Kathiawar. The supply of drinking water is sufficient; water for irrigation purposes is adequate except in parts of Nasik, Poona, Ahmednagar and Sholapur. Agricultural stock is sufficient except in Thar and Parkar, Ahmednagar, Sholapur, Bijapur, Belgaum and Cutch. The fodder supply is sufficient. The quantity of food grains purchaseable per rupee is in the Deccan 23 per cent. above the normal to 25 per cent. less than normal and elsewhere normal to 25 per cent. below. Labourers are getting sufficient employment in the fields.

Hyderabad.—Rainfall 26 cents. The early rice harvest is in progress. The spring crops are fair to good. Late rice sowings continue. Prices:—wheat 8; coarse rice $7\frac{1}{2}$ and jowar $15\frac{3}{4}$ seers per rupee.

Mysore.—There was slight rain throughout the State during the week. The standing crops are in good condition and are being generally harvested. The prospects of the season are good. The cattle are healthy. Water and fodder are available.

Coorg.—Rainfall one inch five cents Picking of coffee and reaping of rice continue Prices of food grains are stationary. Water and fodder are sufficient.

Madras.—The rainfall is very heavy in Nellore and Nilgiris; heavy in Guntur, good in Kurnool, Cuddapah, Tinnevelly, Malabar, Madras, Godavari, Anantapur Coimbatore, Kistna; and South Arcot, and light to fair elsewhere Irrigation supplies are generally sufficient except in parts of the Circars Bellary, Anantapur, Salem and Madura Ploughing, sowing, weeding and transplanting are in progress in parts The standing crops are generally fair but some in parts of Godavari and Madura require more rain, and some in parts of Bellary are diseased Harvests continue with outturn poor to normal and bumper Pasture is sufficient except in parts of Kistna and Bellary Fodder is scanty in parts of Godavari Bellary, Anantapur, Salem, Tanjore, and Madura The condition of cattle is generally good The price of rice is stationary in ten districts, has fallen in seven, and has slightly risen in four. The prices of millets have fluctuated as follows —*Ragi* is stationary in seven districts, has fallen in six, and has slightly risen in seven *Cholum* is stationary in two districts has fallen in seven, and has slightly risen in five *Cumbu* is stationary in four districts, has fallen in four, and has slightly risen in seven

The number of persons in receipt of relief during the preceding and present weeks in each Province or State is shown in the following table —

Name of Province or State	Preceding week (Revised figures)			Present week			Increase or decrease.

H. H. RISLEY,
Secretary to the Government of India

GOVERNMENT OF INDIA
DEPARTMENT OF COMMERCE AND INDUSTRY

Calcutta, December 27th, 1906.

FIRST GENERAL MEMORANDUM ON THE INDIAN WHEAT CROP OF THE SEASON 1906-07.

On the average of the five years ending 1904-05, the areas under wheat in those provinces to which this Memorandum relates, represented 71·2 per cent of the total reported wheat acreage in India. The most important of these are the Panjab and the United Provinces. The latter does not at this season furnish any definite return of acreage but makes a rough estimate founded on reports from districts. The report relating to Bombay and Sind (which represent together some 9 per cent of the total) has not been received in time to be analysed in combination with the other figures; but it is hoped that it may arrive in time for summarisation among the provincial reports below. On the average of the five years named above, these provinces contained 2,326,200 acres of wheat. Leaving out Bombay and Sind, the provinces to which this Memorandum relates contained on the average of the five years ending 1904-05, some 18,438,300 acres under wheat. Last year the total had risen to 18,729,300 acres and this year records a furher advance of 10 per cent bringing the total area so far reported up to 20,599 900 acres.

The condition and prospects of the crop generally are reported to be good though much must depend on the winter rains. In some parts of the Panjab these are reported to be already wanted, but it is known that in the last few days there has been good rain in important tracts of that province.

The following is a summary of the provincial reports. The figures in brackets following the name of each province indicate what percentage of the total area under wheat in India is ordinarily cultivated in that province.

Panjab (*29·3%*) reports the area sown up to the end of November to be 9,067,500 acres (irrigated 4,775 800 acres) which is 11 per cent larger than the area at the corresponding date of last year, and 6 per cent in excess of the area finally returned that year. The rainfall conditions during the last week of August and the first fortnight of September were excellent throughout the Delhi, Jullundhar, Lahore, and Rawalpindi divisions. Satisfactory showers in the Multan division were supplemented by a good flow of water in canals and by ample river floods. With an abundance of moisture in the soil, a vast area has been sown with wheat; and if the estimates are correct, last year's record area has been exceeded. Sowings were still in progress at the date of report. The crop is in good condition.

North-West Frontier Province (*3·5°/₀*).—The total area sown up to the end of November is estimated at 1,018,900 acres (irrigated 295,500 acres) as compared with 738,700 acres reported at this date last year and 1,024,600 acres finally returned for that year. Rainfall at sowing time was timely and good in Burma and Dera Ismail Khan, and supply of water from hill torrents and perennial streams was sufficient. In Peshawar and Kohat, however, rainfall was deficient. If the winter rains fall before the middle of January, further sowings will be made on unirrigated lands. The condition of the crop is generally promising, but its ultimate success depends on the winter rains.

United Provinces (*27·9°/₀*).—The autumn rains were favourable and left sufficient moisture in the soil for sowing, except in the eastern districts where it was insufficient and irrigation had to be resorted to. In this tract sowings were somewhat retarded; elsewhere they were made at the usual time about the middle of October. The crop germinated satisfactorily, and prospects are good; but in the eastern districts the dry crop is beginning to suffer for want of rain; the crop is, however, being irrigated where practicable. Acreage figures are not yet available, but from reports received the total area sown is roughly estimated at 6,865,000 acres compared with 6,367,000 acres last year, this representing an increase of about 8 per cent.

Central Provinces and Berar (*11·4°/₀*).—In the beginning of the monsoon rainfall was continuous, heavy, and evenly distributed, and subsequent timely showers in October left sufficient moisture in the soil. Sowings were successfully carried out and germination was generally good. The total area sown is estimated to exceed last year's area of 3,446,500 acres by 5·8 per cent. The present condition of the crop is very good in most of the important wheat-growing districts. The weather is now clear and cold, but a shower of rain would improve prospects.

Bombay and Sind (*9·1°/₀*).—The information is up to 5th December and is incomplete as sowings continued at that date. The total reported area in British districts and Native States is 1,860,000 acres as compared with 1,512,000 acres at the corresponding date of last year and 1,440,000 the decennial average. Seasonable rainfall and favourable inundation have brought about larger sowings. The crop so far has progressed fairly well except in eastern parts of Deccan and Karnatak, where it is reported to be withering for want of rain.

FREDERICK NOËL-PATON,
Director General of Commercial Intelligence.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

RAILWAYS.

SUITABLE SITE FOR THE ERECTION OF A BRIDGE ACROSS THE RIVER GANGES NEAR CALCUTTA.

RESOLUTION.

No. 10252—10264, dated Calcutta, the 28th December 1906

THE question of the most suitable site for the erection of a bridge across the river Ganges near Calcutta, with the object of affording the metre gauge systems north of that river direct access to the country to the south, has been under consideration for some years past. Hitherto two proposals have been discussed:—the erection of a bridge at Sara, which would link up the metre and broad gauge sections of the Eastern Bengal State Railway, and the construction of a bridge at Godagiri, which would more directly serve the interests of the Bengal and North Western Railway Company. A third proposal has now been put forward by the Railway Board, to the effect that a bridge should be made at Rampur Boalia, connected by short links with the nearest stations on the Ranaghat-Katihar and Eastern Bengal State Railways, and affording direct access to Calcutta by means of a new metre gauge line to be laid *viâ* Ranaghat and Meherpur.

2. This proposal has not hitherto been considered by the Government of India and, in view of the important engineering, administrative, traffic, and financial questions involved, and the complexity of the issues, they are of opinion that there is not at present sufficient information available to enable them to decide definitely as to the most satisfactory solution of the problem. Further, they are unwilling to approach the Secretary of State again in respect of this matter until the commercial community has had the fullest opportunity of criticising the scheme now put forward by the Railway Board, and of expressing their views on the question as a whole. For these reasons, the Government of India have decided to appoint a small committee to which the whole question of the bridging of the Ganges will be referred. The Committee will consider and report on the three schemes outlined in the first paragraph of this Resolution, and will also state their views on the general question of the bridging of the river. They will be empowered to make such enquiries as they may deem necessary, in order to arrive at a decision on the question referred to them.

The Governor General in Council trusts that the Committee will, at the conclusion of this inquiry, find themselves in a position to recommend for the approval of the Secretary of State and the Government of India a scheme for the settlement of this important and complex question, which will be satisfactory to the different interests concerned.

3. The Committee will be constituted as follows:—

President.

Mr. G. Moyle, M.I.C.E., Director of Railway Construction.

Members.

The Hon'ble Mr W. A. Inglis, Secretary to the Government of Bengal, Public Works Department.

Mr. Norman McLeod, Messrs. McLeod & Company, Bengal Chamber of Commerce.

A representative of the Bengal National Chamber of Commerce.

Mr. F. G. Dumayne, Vice-Chairman, Port Commissioners.

An officer of a non-State Railway in India to be appointed by the Government of India.

Secretary.

Mr. J. H. Lovell, Deputy Consulting Engineer for Railways, Calcutta.

4. The Committee will assemble directly after the Christmas Holidays, and it is hoped that they will be in a position to submit their report by the end of February.

5. A copy of a note prepared by the Railway Board for the information of the Committee, setting forth the details of the scheme which they favour, is appended to this Resolution.

ORDERED that a copy of this Resolution be forwarded to the Government of Bengal, to the Government of the United Provinces of Agra and Oudh, to the Government of Eastern Bengal and Assam, to the Home and Finance Departments, to the Secretary to the Railway Board, and to the President and Members of the Committee.

Ordered also, that it be published in the Supplement to the *Gazette of India*, for general information.

W. L. HARVEY,
Secretary to the Government of India.

BRIDGING THE GANGES.

Brief memorandum by the Railway Board on the alternative schemes for providing direct railway communication between Northern Bengal and Calcutta.

The question of bridging the Ganges north of Calcutta has been under the consideration of the Government of India for some years; but no definite conclusion has yet been arrived at as to the site at which the crossing should be made.

2. In 1903 detailed investigations were made as to the feasibility of building a bridge at Sara, a scheme favoured by the Mercantile community of Calcutta who, it is believed, couple with it the conversion to standard gauge of the metre gauge lines of the Eastern Bengal State Railway which lie to the north of the river.

3. Since then, however, a standard gauge line has been constructed from Ranaghat to Godagiri, on the south of the Ganges, and the construction of a metre gauge link from Godagiri to Katihar on the north is now in progress. To connect these two lines a proposal has been put forward for bridging the river at Godagiri.

4. A vast net-work of metre gauge railways occupies the country to the north of the river extending from the extreme east of Bengal to the north of the United Provinces, and it may be taken as certain that, whether a bridge be built at Sara or Godagiri, conversion of existing gauge to a greater or lesser extent, according to the position of the bridge, will be claimed by the Commercial community as a natural sequence, if the full benefit of bridging is not to be lost.

5. Moreover, it is clear that the provision of a bridge at either of the crossings named would not meet satisfactorily the full requirements of trade as a permanent arrangement, and the Railway Board feel confident, therefore, that the building of a bridge at one site would eventually be followed by the building of a bridge at the other.

6. This, coupled with the conviction that the entry of the metre gauge to Calcutta cannot long be postponed, make it necessary to consider the feasibility of adopting an alternative scheme, which, while anticipating the latter event, will also satisfy the full legitimate needs of trade at the minimum of cost to the State.

7. The Railway Board believe that the only practical way of solving this problem is by constructing, at the cost of the State, a bridge at or near Rampur Boalia, by connecting it on the north with the metre gauge lines on either side and by continuing the metre gauge into Calcutta (see index map accompanying).

8. Such is the general review of the case and such the solution proposed by the Board of the difficulties of the situation arising out of the various interests which it is necessary to meet. It is, however, desirable that the main considerations which have influenced the Board in arriving at the conclusions they now put forward, should be set forth more in detail.

9. There are three aspects of any scheme designed to satisfy the requirements of the existing situation, which must be regarded in considering its relative merits and judging its claims to preference over others. Of these the first and most important is the *financial* aspect.

10. Assuming a bridge to be built at Sara, transhipment of traffic beyond the river would still be necessary under existing conditions between the broad and metre gauge stock, and this disadvantage could only be removed by the conversion of the metre gauge lines of the Eastern Bengal State Railway which, as mentioned above, is already regarded by the public as the logical sequence of the connecting of the two gauges at the river.

11. Similarly crossing the Ganges at Godagiri by a bridge would mean transhipment of traffic between the stock of the two gauges, a disadvantage

for the removal of which the only practical means available would lie (given that the conversion of the metre gauge north of the Ganges would in this case be quite beyond the sphere of practical politics) either in the conversion of the newly built Ranaghat-Godagiri railway to metre gauge and the extension of the metre gauge from Ranaghat to Calcutta, or in the construction of an entirely new and independent State metre gauge line between Godagiri and Calcutta, the construction of which would be fully justified financially; fed, as the line would be, by the heavy traffic of a railway of the magnitude of the Bengal and North Western Railway.

12. The alternative scheme, providing as it does for a single bridge at a point about equi-distant from the two railway systems seeking to cross the river, and readily connected with both by short links which do not appreciably affect the through distance, together with a double metre gauge line to the south of the river, bisecting the country which lies between the two standard gauge lines and terminating in Calcutta, would at once remove the difficulty of transhipment, open out a new tract of country, and anticipate the entry of the metre gauge into Calcutta.

13. On the hypothesis, therefore, that to satisfy the requirements of trade efficiently and fully a bridge built at Sara would also necessitate the building of a bridge at Godagiri, it will at once be apparent that the scheme of a single bridge at Rampur Boalia, if it succeeds in establishing its claim fully to meet the needs of trade, has a substantial financial advantage. Put into figures the approximate cost of the two alternatives may be taken as follows:—

	Rs
(i) Cost of bridges at Sara and Godagiri *plus* the cost of converting the metre gauge lines of the Eastern Bengal State Railway and the cost of extending the metre gauge from Godagiri to Calcutta .	670 lakhs.
(ii) Cost of bridge at Rampur Boalia *plus* cost of connections on the north with the metre gauge lines on either side and the cost of a double metre gauge line to Calcutta	390 lakhs.
(iii) Saving to be effected by the adoption of the Rampur Boalia scheme . . .	280 lakhs.

or approximately 3 crores of rupees.

14. The next aspect which calls for consideration is the *commercial* aspect or in other words that which concerns the ability of the schemes to meet the requirements of trade. The alternative scheme of the Rampur Boalia Bridge will, it is certain, prove to be no less efficient commercially than the combined Sara and Godagiri bridges scheme and in addition it gives promise of securing advantages to trade which are absent from the latter.

15. There can be no question but that the provision of an additional line from the north to Calcutta and the opening to railway communication of new country, are solid advantages to the trade of the Port. This additional line would, on the Eastern side, divert from the standard gauge the whole of the tea and jute traffic coming by rail from Northern Bengal by the Sara route, and as the increase in lead would be approximately nine miles only, the Railway Board are prepared to agree that no greater charge shall be levied upon traffic carried by the new route than what it would have to pay if a bridge were built at Sara. The carriage through to destination of this traffic in metre gauge wagons would have the result of placing the standard gauge stock at the entire disposal of the traffic coming from Eastern Bengal and Assam *viâ* Goalundo and Khulna, and would thus insure this traffic against the inconvenience to which it is now liable in times of pressures (an inconvenience which would be accentuated, rather than otherwise, in the event of the provision of a bridge at Sara) by reason of the demands of the traffic from the north.

16. On the western side, the additional line would provide a more direct route to Port than will be available under present conditions when the Katihar-Godagiri link is completed. Trade would be relieved of the present transhipment of a heavy grain traffic at Mokameh, where the river is causing considerable trouble, and Calcutta would be placed in direct communication with

Oudh and the fertile area of Tirhut which the Bengal and North Western Railway system serves. This would also tend to relieve the strain on the East Indian Railway and release a certain amount of its stock for general use.

17. With regard to terminal arrangements, there is no reason to suppose that there will be any practical difficulty, which is not susceptible of removal, in providing them, and, moreover, it has to be noted that they will be equally necessary whichever of the two alternatives for bridging the Ganges is adopted unless transhipment is imposed at Godagiri. The Port of Madras has at the present time lines of both gauges running into it and Karachi has for some time past been pressing for the entry of the metre gauge into its port.

18. There remains the *engineering* aspect to consider. Here the advantage lies unquestionably with the Rampur Boalia site. The Ganges is notoriously a difficult river to bridge, owing to the conditions of the soil, the width of the river and the readiness with which it deviates from its course. The Sara site, though declared to be quite practicable, is admittedly a difficult one. That at Godagiri is better, though not free from difficulty. At Rampur Boalia the conditions are favourable, as at that point the river traverses a straight reach, from which it has not varied for a century, and both in building and maintenance the site is preferable to that at either Sara and Godagiri.

19. To summarize, the objects to be gained by the adoption of the Rampur Boalia scheme are as follows:—

(*i*) It can be carried out at a comparatively reasonable cost.

(*ii*) It will provide a new route for tea and jute from Northern Bengal to be carried through to destination in its own special stock.

(*iii*) It will render available a large number of wagons for the exclusive use of the traffic from Eastern Bengal and Assam *via* Goalundo and Khulna.

(*iv*) It will by relieving the standard gauge section of the Eastern Bengal State Railway of the present *via* Sara traffic, enable it to deal more expeditiously with the *viá* Goalundo and Khulna traffic.

(*v*) It will, by providing a new and independent route for the present *viá* Sara traffic, enable it to be dealt with more expeditiously.

(*vi*) It will effectively meet the present difficulties of transhipment at Sara and Godagiri without the imposition on trade of any extra charge for freight.

(*vii*) It will afford railway facilities to a new area between Rampur Boalia and Ranaghat.

(*viii*) It will relieve pressure on the East Indian Railway at Mokameh and make a larger number of wagons available for the general traffic of that line.
